Modern Architecture The Architecture Of:

Transformations in Modern Architecture Arthur Drexler, 1979 **Modern Architecture** Otto Wagner, 1988 In 1896 Otto Wagner's *Modern Architecture* shocked the European architectural community with its impassioned plea for an end to eclecticism and for a modern style suited to contemporary needs and ideals utilizing the nascent constructional technologies and materials Through the combined forces of his polemical pedagogical and professional efforts this determined newly appointed professor at the Vienna Academy of Fine Arts emerged in the late 1890s along with such contemporaries as Charles Rennie Mackintosh in Glasgow and Louis Sullivan in Chicago as one of the leaders of the revolution soon to be identified as the Modern Movement Wagner's historic manifesto is now presented in a new English translation the first in almost ninety years based on the expanded 1902 text and noting emendations made to the 1896 1898 and 1914 editions In his introduction Dr Harry Mallgrave examines Wagner's tract against the backdrop of nineteenth century theory critically exploring the affinities of Wagner's revolutionary plan with the German eclectic debate of the 1840s the materialistic tendencies of the 1870s and 1880s and the emerging cultural ideology of modernity *Modern Architecture* is one of those rare works in the literature of architecture that not only proclaimed the dawning of a new era but also perspicaciously and cogently shaped the issues and the course of its development it defined less the personal aspirations of one individual and more the collective hopes and dreams of a generation facing the sanguine promise of a new century

The Meaning of Modern Architecture Hans Rudolf Morgenthaler, 2016-03-09 Using empathy as established by the Vienna School of Art History complemented by insights on how the mind processes visual stimuli as demonstrated by late 19th century psychologists and art theorists this book puts forward an innovative interpretative method of decoding the forms and spaces of Modern buildings This method was first developed as scholars realized that the new abstract art appearing needed to be analysed differently than the previous figurative works Since architecture experienced a similar development in the 1920s and 30s this book argues that the empathetic method can also be used in architectural interpretation While most existing scholarship tends to focus on formal and functional analysis this book proposes that Modern architecture is too diverse to be reduced to a few common formal or ornamental features Instead by relying on the viewer's innate psycho physiological perceptive abilities sensual and intuitive understandings of composition form and space are emphasized These aspects are especially significant because Modern Architecture lacks the traditional stylistic signs Including building analyses it shows how by visually reducing cubical forms and spaces to linear configurations the exteriors and interiors of Modern buildings can be interpreted via human perceptive abilities as dynamic movement systems commensurate with the new industrial transportation age This reveals an inner necessity these buildings express about themselves and their culture rather than just an explanation of how they are assembled and how they should be used The case studies highlight the contrasts between buildings designed by different architects rather than concentrating on the few features that relate them to the zeitgeist It

analyses the buildings directly as the objects of study not indirectly as designs filtered through a philosophical or theoretical discourse The book demonstrates that with technology and science affecting culture

Key Modern Architects Andrew Higgott, 2018-05-31 Key Modern Architects provides an accessible and thought provoking introduction to the work of the most significant architects of the modern era Fifty short chapters introduce fifty key architects from Le Corbusier to Aldo Van Eyck to Zaha Hadid exploring their most influential buildings and developing a critique of each architect's work within a broader cultural and historical context The selection represents the most influential architects working from 1890 to the present those most likely to be taught on survey courses in modern architectural history along with some lesser known names with an equal claim to influence Emphasis is placed on a critical and interpretative approach allowing the student to position each architect in a cultural and intellectual context quickly and easily Artistic technical social and intellectual developments are brought to the fore built and unbuilt projects writings and influences This approach brings to light the ideology behind architectural work offering insights into each architect's working practice Helps students to develop a critical approach to understanding modern architectural history One chapter per architect meaning chapters may be read individually as a concise resource for the study of an architect or together as a coherent book length history of the whole period of modern architecture Chapters are supported by boxed lists of each architect's most significant projects along with suggestions for further reading as a springboard to further study and research Combining the clarity and accessibility of a textbook with in depth reading and a critical approach Key Modern Architects provides an invaluable resource for both the classroom and for independent study in architectural and art history

The Other Tradition of Modern Architecture Colin St. John Wilson, 2007 Sets out to examine the underlying themes of Modern European architecture assessing their impact influence and continuing development This book argues for a continuing tradition an uncompleted project sustained against the rigidifying orthodoxy the white walls functionalism and blank boxes of CIAM by a resistance movement

The Language of Post-modern Architecture Charles Jencks, 1977 A classic account which when written in 1977 was the first to define post modernism in architecture an event which led to subsequent adoption of the term in many other fields It is the story of the failure of modern architecture to communicate with its users and the attempt of post modernists to overcome this failure with a richer more widely shared language post modern classicism Google Books

Modern Architecture Alan Colquhoun, 2002-04-25 This new account of international modernism explores the complex motivations behind this revolutionary movement and assesses its triumphs and failures The work of the main architects of the movement such as Frank Lloyd Wright Adolf Loos Le Corbusier and Mies van der Rohe is re examined shedding new light on their roles as acknowledged masters Alan Colquhoun explores the evolution of the movement from Art Nouveau in the 1890s to the megastructures of the 1960s revealing the often contradictory demands of form function social engagement modernity and tradition

History of Modern Architecture Leonardo Benevolo, 1977 A serious and original study of the beginnings and

development of modernism in which the pictorial aspects are designed to aid in the communication of the author's closely reasoned formulations. Let it be said at once that the format of this work is richly handsome; it is a two-volume boxed set comprising 844 pages and well over 1,000 high-quality illustrations, and it reflects throughout its publisher's conviction that good design is an essential, not superficial, part of bookmaking. Beyond that, it should be emphasized that this work is not another facile cultural tour of modern architecture. It is a serious and original study of the beginnings and development of modernism in which the pictorial aspects are designed to aid in the communication of the author's closely reasoned formulations rather than to gloss over a lack of substantive content. The book is a translation of the third Italian edition published in 1966. Benevolo, who is on the faculty of architecture in Venice, has earned an international reputation as a historian of architecture and town planning, and his publications embrace the span of time from the Renaissance to the foreseeable future. One such publication, *The Origins of Modern Town Planning* (The MIT Press, 1967), may be read as a prelude to the present work as well as an independent contribution. Perhaps more than any other architectural historian in our time, Benevolo has made a determined effort to place developments in design and planning in their proper social and political settings. Indeed, the author argues that the development of the modern movement in architecture was determined not by aesthetic formalisms but largely by the social changes that have occurred since about 1760. After the middle of the eighteenth century, without the continuity of formal activity being in any way broken, indeed while architectural language seems to be acquiring a particular coherence, the relations between architect and society began to change radically. New material and spiritual needs, new ideas and modes of procedure arise both within and beyond the traditional limits, and finally they run together to form a new architectural synthesis that is completely different from the old one. In this way, it is possible to explain the birth of modern architecture, which otherwise would seem completely incomprehensible. This second volume is concerned with the modern movement proper from 1914 to 1966. The author emphasizes the unity of the movement, rejecting the usual treatment that allots to the individual architects separate and unconnected biographical accounts. Benevolo remarks at one point: "When one talks about modern architecture, one must bear in mind the fact that it implies not only a new range of forms but also a new way of thinking whose consequences have not yet all been calculated." His main concern is to provide a more exact calculation of those consequences. *Modern Architecture* Henry Heathcote Statham, 1897

Principles of Modern Architecture Christian Norberg-Schulz, 2000 *Principles of Modern Architecture* is a clear, concise, accessible account of what the modern movement really wanted and what it achieved by one of the world's leading architectural critics. *Modern Architecture Since 1900* William J. R. Curtis, 1987 A penetrating analysis of the modern architectural tradition and its origins. Since its first publication in 1982, *Modern Architecture Since 1900* has become established as a contemporary classic. Worldwide in scope, it combines a clear historical outline with masterly analysis and interpretation. Technical, economic, social, and intellectual developments are brought together in a comprehensive narrative.

which provides a setting for the detailed examination of buildings Throughout the book the author's focus is on the individual architect and on the qualities that give outstanding buildings their lasting value For the third edition the text has been radically revised and expanded incorporating much new material and a fresh appreciation of regional identity and variety Seven chapters are entirely new including expanded coverage of recent world architecture Described by James Ackerman of Harvard University as immeasurably the finest work covering this field in existence this book presents a penetrating analysis of the modern tradition and its origins tracing the creative interaction between old and new that has generated such an astonishing richness of architectural forms across the world and throughout the century Modern Movements in

Changing Ideals in Modern Architecture, 1750-1950 Peter Collins, 1998-07-14 Collins explains what Revivalism Rationalism Eclecticism and Functionalism meant to those who practised them examining the impact that social forces and the other arts and sciences had on architectural styles while recognizing the tectonic continuities that underlie the seeming ruptures between pre modern modern and post modern approaches to design His work is infused with a deep sympathy for the classical spirit of the eighteenth century and he argued rigorously and passionately that Enlightenment ideas could be of real value to the architects of his generation particularly since technology had made it possible to use them effectively Collins's plea for sensitivity to tradition and the urban fabric while encouraging technological innovation and unprecedented programs makes his thought just as vital today as it was ahead of its time when first published Collins had long wished to see an affordable fully illustrated edition of his book and McGill Queen's University Press and the McGill School of Architecture are proud to at long last fulfil this wish The new edition includes a biographical sketch of Collins a brief publication history of the work and an introductory essay by Kenneth Frampton that discusses the importance of the work at the time it was first published and highlights its relevance for the architectural problems of today Like the classic works of Hitchcock Giedion Pevsner and Benevolo *Changing Ideals in Modern Architecture* is essential reading and forms a striking contrast with other works on modernism such as Reyner Banham's It will be pertinent to all those interested in architectural history and theory modern history history of ideas and aesthetics **Guide to Modern Architecture** Reyner Banham, 1962 Modern Architecture and Design Bill Risebero, 1982 **Encyclopedia of Modern Architecture** Wolfgang Pehnt, 1964 Bruno Zevi on Modern Architecture Andrea Oppenheimer Dean, Bruno Zevi, 1983 **Modern Architecture** Vincent Joseph Scully, 1989 *An Introduction to Modern Architecture* James Maude Richards, 1940
