**The Life of the Cosmos** Lee Smolin, 1999-03-04 Lee Smolin offers a new theory of the universe that is at once elegant comprehensive and radically different from anything proposed before Smolin posits that a process of self organization like that of biological evolution shapes the universe as it develops and eventually reproduces through black holes each of which may result in a new big bang and a new universe Natural selection may guide the appearance of the laws of physics favoring those universes which best reproduce The result would be a cosmology according to which life is a natural consequence of the fundamental principles on which the universe has been built and a science that would give us a picture of the universe in which as the author writes the occurrence of novelty indeed the perpetual birth of novelty can be understood Smolin is one of the leading cosmologists at work today and he writes with an expertise and force of argument that will command attention throughout the world of physics But it is the humanity and sharp clarity of his prose that offers access for the layperson to the mind bending space at the forefront of today's physics

**McGraw-Hill encyclopedia of science & technology** McGraw-Hill, 2002 **Civilization and the Culture of Science** Stephen Gaukroger, 2020-02-19 How did science come to have such a central place in Western culture How did cognitive values and subsequently moral political and social ones come to be modelled around scientific values In *Civilization and the Culture of Science* Stephen Gaukroger explores how these values were shaped and how they began in turn to shape those of society The core nineteenth and twentieth century development is that in which science comes to take centre stage in determining ideas of civilization displacing Christianity in this role Christianity had provided a unifying thread in the study of the world however and science had to match this which it did through the project of the unity of the sciences The standing of science came to rest or fall on this question which the book sets out to show in detail is essentially ideological not something that arose from developments within the sciences which remained pluralistic and modular A crucial ingredient in this process was a fundamental rethinking of the relations between science and ethics economics philosophy and engineering In his engaging description of this transition to a scientific modernity Gaukroger examines five of the issues which underpinned this shift in detail changes in the understanding of civilization the push to unify the sciences the rise of the idea of the limits of
