Blurred Transparencies in Contemporary Glass Architecture Aki Ishida, 2020-04-22 *Blurred Transparencies in Contemporary Glass Architecture* brings to light complex readings of transparent glass through

close observations of six pivotal works of architecture. Written from the perspectives of a practitioner, the six essays challenge assumptions about fragility and visual transparency of glass. A material imbued with idealism and utopic vision, glass has captured architects' imagination, and glass's fragility and difficulties in thermal control continue to present technical challenges. In recent decades, architecture has witnessed an emergence of technological advancements in chemical coating, structural engineering, and fabrication methods that resulted in new kinds of glass transparencies. Buildings examined in the book include a sanatorium with expansive windows delivering light and air to recovering tuberculosis patients, a pavilion with a crystal clear glass plenum circulating air for heating and cooling, a glass monument symbolizing the screen of personal devices that shortened the distance between machines and humans, and a glass building symbolizing the social and material intertwining in the glass ceiling metaphor. Connecting material glass to broader cultural and social contexts, *Blurred Transparencies in Contemporary Glass Architecture* enlightens students and practitioners of architecture as well as the general public with interest in design. The author demonstrates how glass is rarely crystal clear but is blurred both materially and metaphysically, revealing complex readings of ideas for which glass continues to stand.

Glass Manufacture Walter Rosenhain, 2016-09-30 The present volume on Glass Manufacture has been written chiefly for the benefit of those who are users of glass and therefore makes no claim to be an adequate guide or help to those engaged in glass manufacture itself For this reason the account of manufacturing processes has been kept as non technical as possible no detailed drawings of plant or appliances have been given and only a few illustrative diagrams have been introduced for the purpose of avoiding lengthy verbal descriptions In describing each process the object in view has been to give an insight into the rationale of each step so far as it is known or understood and thus to indicate the possibilities and limitations of the process and of its resulting products rather than to provide a detailed guide to the technique of the various operations The practical aim of the book has further been safeguarded by the fact that the processes described in these pages are with the exception of those described as obsolete to the author s definite knowledge in commercial use at the present time For this reason many apparently ingenious and beautiful processes described in earlier books on glass have not been mentioned here since the author could find no trace of their employment beyond the records of the various patents involved On the other hand the reader must be warned to bear in mind that the peculiar conditions of the glass manufacturing industry have led to the practice on the part of manufacturers of keeping their processes as secret as possible so that the task of the author who would give an accurate account of the best modern processes used in any given department of the industry is beset with great difficulties The author has endeavoured to steer the best course open to him under these circumstances and he would appeal to the paucity of glass literature in the English language as evidence of the difficulty to which he refers
