Modern Logic A Survey Historical Philosophical And Mathematical A:

Modern Logic — A Survey E. Agazzi, 2012-12-06 Logic has attained in our century a development incomparably greater than in any past age of its long history and this has led to such an enrichment and proliferation of its aspects that the problem of some kind of unified recomprehension of this discipline seems nowadays unavoidable This splitting into several subdomains is the natural consequence of the fact that Logic has intended to adopt in our century the status of a science This always implies that the general optics under which a certain set of problems used to be considered breaks into a lot of specialized sectors of inquiry each of them being characterized by the introduction of specific viewpoints and of technical tools of its own The first impression that often accompanies the creation of one of such specialized branches in a discipline is that one has succeeded in isolating the scientific core of it by restricting the somehow vague and redundant generality of its original philosophical configuration But after a while it appears that some of the discarded aspects are indeed important and a new specialized domain of investigation is created to explore them By following this procedure one finally finds himself confronted with such a variety of independent fields of research that one wonders whether the fact of labelling them under a common denomination be nothing but the contingent effect of a pure historical tradition Modern Logic — A Survey E. Agazzi, 1980-11-30 Logic has attained in our century a development incomparably greater than in any past age of its long history and this has led to such an enrichment and proliferation of its aspects that the problem of some kind of unified recomprehension of this discipline seems nowadays unavoidable This splitting into several subdomains is the natural consequence of the fact that Logic has intended to adopt in our century the status of a science This always implies that the general optics under which a certain set of problems used to be considered breaks into a lot of specialized sectors of inquiry each of them being characterized by the introduction of specific viewpoints and of technical tools of its own The first impression that often accompanies the creation of one of such specialized branches in a discipline is that one has succeeded in isolating the scientific core of it by restricting the somehow vague and redundant generality of its original philosophical configuration But after a while it appears that some of the discarded aspects are indeed important and a new specialized domain of investigation is created to explore them By following this procedure one finally finds himself confronted with such a variety of independent fields of research that one wonders whether the fact of labelling them under a common denomination be nothing but the contingent effect of a pure historical tradition The Primary Logic Michele Malatesta, 1997 **Language, Quantum, Music** Maria Luisa Dalla Chiara, Roberto Giuntini, Federico Laudisa, 2013-04-17 A vivid and comprehensive picture of the current state of research in all directions of logic and philosophy of science The book presents a wide combination of papers containing relevant technical results in the foundations of science and papers devoted to conceptual analyses deeply rooted in advanced present day research Audience The volume is attractive both for specialists in foundational questions and scholars interested in general epistemology The Dawn of Cognitive Science L.

Albertazzi,2013-04-17 Current debate in cognitive science from robotics to analysis of vision deals with problems like the perception of form the structure and formation of mental images and their modelling the ecological development of artificial intelligence and cognitive analysis of natural language It focuses in particular on the presence of a hierarchy of intellectual constructions in different formats of representation These diverse approaches which share a common assumption of the inner nature of representation call for a new epistemology even a new psychophysics based on a theory of reference which is intrinsically cognitive As a contribution to contemporary research the reading presents the core of theories developed in Central Europe between the late nineteenth and early twentieth centuries by philosophers physicists psychologists and semanticists who shared a dynamic approach and a pronounced concern with problems of interaction and dependence These theories offer innovative solutions to some of the epistemological and philosophical problems currently at the centre of debate like part whole theory of relations and conceptual and linguistic categorization Attitudes and Changing Contexts

Robert van Rooij,2006-03-30 In this book the author defends a unified externalists account of propositional attitudes and reference and formalizes this view within possible world semantics He establishes a link between philosophical analyses of intentionality and reference and formal semantic theories of discourse representation and context change Stalnakerian diagonalization plays an important role here Anaphora are treated as referential expressions while presupposition is seen as a propositional attitude The relation between belief change and the semantic analyses of conditional sentences and evidential knowledge and buletic desire propositional attitudes is discussed extensively Reference, Truth and Conceptual Schemes

G. Forrai,2013-03-14 1 HISTORICAL BACKGROUND The purpose of the book is to develop internal realism the metaphysical epistemo logical doctrine initiated by Hilary Putnam Reason Truth and History Introduction Many Faces In doing so I shall rely sometimes quite heavily on the notion of conceptual scheme I shall use the notion in a somewhat idiosyncratic way which however has some affinities with the ways the notion has been used during its history So I shall start by sketching the history of the notion This will provide some background and it will also give opportunity to raise some of the most important problems I will have to solve in the later chapters The story starts with Kant Kant thought that the world as we know it the world of tables chairs and hippopotami is constituted in part by the human mind His central argument relied on an analysis of space and time and presupposed his famous doctrine that knowledge cannot extend beyond all possible experience It is a central property of experience he claimed that it is structured spatially and temporally However for various reasons space and time cannot be features of the world as it is independently of our experience So he concluded that they must be the forms of human sensibility i e necessary ingredients of the way things appear to our senses *Brouwer meets Husserl* Mark

van Atten,2006-11-08 Can the straight line be analysed mathematically such that it does not fall apart into a set of discrete points as is usually done but through which its fundamental continuity is lost And are there objects of pure mathematics that can change through time Mathematician and philosopher L E J Brouwer argued that the two questions are closely related

and that the answer to both is yes To this end he introduced a new kind of object into mathematics the choice sequence But other mathematicians and philosophers have been voicing objections to choice sequences from the start This book aims to provide a sound philosophical basis for Brouwer's choice sequences by subjecting them to a phenomenological critique in the style of the later Husserl

A Model-Theoretic Realist Interpretation of Science E.B. Ruttkamp, 2013-03-14 In this book Emma Ruttkamp demonstrates the power of the full blown employment of the model theoretic paradigm in the philosophy of science Within this paradigm she gives an account of sciences as process and product She expounds the received statement and the non statement views of science and shows how the model theoretic approach resolves the spurious tension between these views In this endeavour she also engages the views of a number of contemporary philosophers of science with affinity to model theory This text can be read by specialists working in philosophy of science or formal semantics by logicians working on the structure of theories and by students in philosophy of science this text offers a thorough introduction to non statement accounts of sciences as well as a discussion of the traditional statement account of science

Collected Papers of Stig Kanger with Essays on his Life and Work Volume II Ghita Holmström-Hintikka, Sten Lindström, R. Sliwinski, 2012-12-06 Stig Kanger 1924-1988 made important contributions to logic and formal philosophy Kanger's dissertation *Provability in Logic* 1957 contained significant results in proof theory as well as the first fully worked out model theoretic interpretation of quantified modal logic It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic Kanger's most original achievements were in the areas of general proof theory the semantics of modal and deontic logic and the logical analysis of the concept of rights He also contributed to action theory preference logic and the theory of measurement This is the first of two volumes dedicated to the work of Stig Kanger The present volume is a complete collection of Kanger's philosophical papers The second volume contains critical essays on Kanger's work as well as biographical essays on Kanger written by colleagues and friends

Phenomenological Aspects of Wittgenstein's Philosophy B.-C. Park, 2012-12-06 In his writings around 1930 Wittgenstein relates his philosophy in different ways to the idea of phenomenology He indicates that his main philosophical project had earlier been the construction of a purely phenomenological language and even after having given up this project he believed that the world we live in is the world of sense data i.e. that is of phenomenological objects However a problem is posed by the fact that he does not appear ever to have given a full explicit account of what he means by his phenomenological language or phenomenological problems In this book I have tried to unravel the nature of Wittgenstein's phenomenology and to examine its importance for his entire work in philosophy Phenomenology can be characterized as philosophy whose primary concern is what is immediately given in one's experience This immediately given is not merely impressions inside one's mind but includes also the part of objective reality that impinges upon one's consciousness Thus an aim of phenomenological enterprise is to grasp this objective reality by attending to immediate experience Husserl's

phenomenology is in fact a case in point *Reuniting the Antipodes - Constructive and Nonstandard Views of the Continuum* Peter Schuster,Ulrich Berger,Horst Osswald,2013-03-14 At first glance Robinson s original form of nonstandard analysis appears nonconstructive in essence because it makes a rather unrestricted use of classical logic and set theory and in particular of the axiom of choice Recent developments however have given rise to the hope that the distance between constructive and nonstandard mathematics is actually much smaller than it appears So the time was ripe for the first meeting dedicated simultaneously to both ways of doing mathematics and to the current and future reunion of these seeming opposites Consisting of peer reviewed research and survey articles written on the occasion of such an event this volume offers views of the continuum from various standpoints Including historical and philosophical issues the topics of the contributions range from the foundations the practice and the applications of constructive and nonstandard mathematics to the interplay of these areas and the development of a unified theory *In Search of a New Humanism* M.R. Egidi,2013-04-17 This collection of essays presents a systematic and up to date survey of the main aspects of Georg Henrik von Wright s philosophy tracing the general humanistic leitmotiv to be found in his vast varied output The analysis covers the developments in Von Wright s thought up to the end of the 1990s The essays are arranged thematically to focus on the chief areas of Von Wright s interests practical rationality human action and determinism philosophical logic and theories of norms research in the analytical tradition and Wittgenstein studies Readership Scholars and students of moral philosophy logic psychology sociology cognitive science and the history of contemporary philosophy *Talking Wolves* A. Biletzki,2013-03-14 Talking Wolves advances an analysis of Hobbes which takes language seriously as seriously as Hobbes took it It presents a reading of Hobbes s view of society at large and political society in particular through a comprehensive discussion based on and intimately linked to his philosophy of language This philosophy in turn is seen in a new light as being a pragmatic theory of language in use language in action *Visualization, Explanation and Reasoning Styles in Mathematics* P. Mancosu,Klaus Froyen Jørgensen,S.A. Pedersen,2006-03-30 In the 20th century philosophy of mathematics has to a great extent been dominated by views developed during the so called foundational crisis in the beginning of that century These views have primarily focused on questions pertaining to the logical structure of mathematics and questions regarding the justification and consistency of mathematics Paradigmatic in this respect is Hilbert s program which inherits from Frege and Russell the project to formalize all areas of ordinary mathematics and then adds the requirement of a proof by epistemically privileged means nitistic reasoning of the consistency of such formalized theories While interest in modified versions of the original foundational programs is still thriving in the second part of the twentieth century several philosophers and historians of mathematics have questioned whether such foundational programs could exhaust the realm of important philosophical problems to be raised about the nature of mathematics Some have done so in open confrontation and hostility to the logically based analysis of mathematics which characterized the classical foundational programs while others and many of the contributors to

this book belong to this tradition have only called for an extension of the range of questions and problems that should be raised in connection with an understanding of mathematics The focus has turned thus to a consideration of what mathematicians are actually doing when they produce mathematics Questions concerning concept formation understanding heuristics changes in style of reasoning the role of analogies and diagrams etc (Over)Interpreting Wittgenstein A. Biletzki, 2012-09-14 Over Interpreting Wittgenstein will be read by philosophers investigating Wittgenstein and by scholars interpreters students and specialists in both analytic and continental philosophy It will intrigue readers interested in issues of interpretation and cultural studies This book tells the story as yet untold of Wittgenstein interpretation during the past eighty years It provides different interpretations chronologies developments and controversies It aims to discover the socio cultural rather than psychological motives and motivations behind the philosophical community's project of interpreting Wittgenstein As a cultural history of ideas it traces the parallelism between Wittgenstein interpretation and the move from metaphysics to language to postmodernism effected in the twentieth century Collected Papers of Stig Kanger with Essays on his Life and Work Ghita Holmström-Hintikka, Sten Lindström, R. Sliwinski, 2012-12-06 Stig Kanger 1924 1988 made important contributions to logic and formal philosophy Kanger's dissertation Provability in Logic 1957 contained significant results in proof theory as well as the first fully worked out model theoretic interpretation of quantified modal logic It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic Kanger's most original achievements were in the areas of general proof theory the semantics of modal and deontic logic and the logical analysis of the concept of rights He also contributed to action theory preference logic and the theory of measurement This is the first of two volumes dedicated to the work of Stig Kanger The present volume is a complete collection of Kanger's philosophical papers The second volume contains critical essays on Kanger's work as well as biographical essays on Kanger written by colleagues and friends

Theoretical Knowledge Viacheslav Semenovich Stepin, 2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures

The Dynamics of Thought Peter Gardenfors, 2005-11-10 This book is a selection from the articles that I have written over a period of more than twenty years Since the focus of my research interests has shifted several times during this period it would be difficult to identify a common theme for all the papers in the volume Following the Swedish tradition I

therefore present this as a sm rg sbord of philosophical and cognitive issues that I have worked on To create some order I have organized the sixteen papers into five general sections 1 Decision theory 2 belief revision and nonmonotonic logic 3 induction 4 semantics and pragmatics and 5 cognition and evolution Having said this I still think that there is a common theme to my work over the years The dynamics of thought My academic interests have all the time dealt with aspects of how different kinds of knowledge should be represented and in particular how changes in knowledge will affect thinking Hence the title of the book Naming the Rainbow D. Dedrick, 2013-03-09 Is there a universal biolinguistic disposition for the development of basic colour words This question has been a subject of debate since Brent Berlin and Paul Kay s Basic Color Terms Their Universality and Evolution was published in 1969 Naming the Rainbow is the first extended study of this debate The author describes and criticizes empirically and conceptually unified models of colour naming that relate basic colour terms directly to perceptual and ultimately to physiological facts arguing that this strategy has overlooked the cognitive dimension of colour naming He proposes a psychosemantics for basic colour terms which is sensitive to cultural difference and to the nature and structure of non linguistic experience Audience Contemporary colour naming research is radically interdisciplinary and Naming the Rainbow will be of interest to philosophers psychologists anthropologists and cognitive scientists concerned with biological constraints on cognition and categorization problems inherent in cross cultural and in interdisciplinary science the nature and extent of cultural relativism
