Modern Many-particle Physics Enrico Lipparini, 2008 A study of modern many particle physics this text describes homogenous systems such as electron gas in different dimensions the quantum well in an intense magnetic field liquid helium and nuclear matter and addresses finite systems such as metallic clusters quantum dots helium drops and nuclei

Modern Many-particle Physics Enrico Lipparini, 2008 **Modern Many-particle Physics: Atomic Gases, Nanostructures And Quantum Liquids (2nd Edition)** Enrico Lipparini, 2008-02-01 This book is devoted to the description of Bosonic and Fermionic systems metallic clusters quantum dots wires rings and molecules trapped Fermi and Bose atoms liquid drops of Helium electron gas in different dimensions and geometries with and without magnetic fields Extensively updated with 200 extra pages the new edition of this successful book includes the field s cutting edge areas spin orbit coupling in heterostructures and spintronics the conductivity problem conductivity of quantum wires magnetoconductivity of nanostructures spin Hall conductivity atomic Fermi gases in traps non collinear local spin density approximation calculations and Brueckner Hartree Fock in finite size systems Quantum Matter at Ultralow Temperatures M. Inguscio, W. Ketterle, S. Stringari, 2016-09-27 The Enrico Fermi summer school on Quantum Matter at Ultralow Temperatures held on 7-15 July 2014 at Varenna Italy featured important frontiers in the field of ultracold atoms For the last 25 years this field has undergone dramatic developments which were chronicled by several Varenna summer schools in 1991 on Laser Manipulation of Atoms in 1998 on Bose Einstein Condensation in Atomic Gases and in 2006 on Ultra cold Fermi Gases The theme of the 2014 school demonstrates that the field has now branched out into many different directions where the tools and precision of atomic physics are used to realise new quantum systems or in other words to quantum engineer interesting Hamiltonians The topics of the school identify major new directions Quantum gases with long range interactions either due to strong magnetic dipole forces due to Rydberg excitations or for polar molecules due to electric dipole interactions quantum gases in lower dimensions quantum gases with disorder atoms in optical lattices now with single site optical resolution systems with non trivial topological properties e.g. with spin orbit coupling or in artificial gauge fields quantum impurity problems Bose and Fermi polarons quantum magnetism Fermi gases with strong interactions spinor Bose Einstein condensates and coupled multi component Bose gases or Bose Fermi mixtures continue to be active areas The current status of several of these areas is systematically summarized in this volume Modern Physics Luca Salasnich, Francesco Lorenzi, 2024-12-31 This textbook offers an introduction to statistical mechanics special relativity and quantum physics developed from lecture notes for the Quantum Physics course at the University of Padua Beginning with a brief review of classical statistical mechanics in the first chapter the book explores special and general relativity in the second chapter The third chapter delves into the historical analysis of light quantization while the fourth chapter discusses Niels Bohr s quantization of energy levels and electromagnetic transitions The Schrödinger equation is investigated in the fifth chapter Chapter Six covers applications of

quantum mechanics including the quantum particle in a box quantum particle in harmonic potential quantum tunneling stationary perturbation theory and time dependent perturbation theory Chapter Seven outlines the basic axioms of quantum mechanics Chapter Eight focuses on quantum atomic physics emphasizing electron spin and utilizing the Dirac equation for theoretical justification The ninth chapter explains quantum mechanics principles for identical particles at zero temperature while Chapter Ten extends the discussion to quantum particles at finite temperature Chapter Eleven provides insights into quantum information and entanglement and the twelfth chapter explains the path integral approach to quantum mechanics

Quantum Foundations And Open Quantum Systems: Lecture Notes Of The Advanced School Theo M

Nieuwenhuizen, Claudia Pombo, Claudio Furtado, Andrei Yu Khrennikov, Inacio A Pedrosa, Vaclav Spicka, 2014-10-03 The Advanced School on Quantum Foundations and Open Quantum Systems was an exceptional combination of lectures These comprise lectures in standard physics and investigations on the foundations of quantum physics On the one hand it included lectures on quantum information quantum open systems quantum transport and quantum solid state On the other hand it included lectures on quantum measurement models for elementary particles sub quantum structures and aspects on the philosophy and principles of quantum physics The special program of this school offered a broad outlook on the current and near future fundamental research in theoretical physics The lectures are at the level of PhD students **Quantum Physics**

of Light and Matter Luca Salasnich, 2014-05-13 The book gives an introduction to the field quantization second quantization of light and matter with applications to atomic physics The first chapter briefly reviews the origins of special relativity and quantum mechanics and the basic notions of quantum information theory and quantum statistical mechanics The second chapter is devoted to the second quantization of the electromagnetic field while the third chapter shows the consequences of the light field quantization in the description of electromagnetic transitions In the fourth chapter it is analyzed the spin of the electron and in particular its derivation from the Dirac equation while the fifth chapter investigates the effects of external electric and magnetic fields on the atomic spectra Stark and Zeeman effects The sixth chapter describes the properties of systems composed by many interacting identical particles by introducing the Hartree Fock variational method the density functional theory and the Born Oppenheimer approximation Finally in the seventh chapter it is explained the second quantization of the non relativistic matter field i e the Schrodinger field which gives a powerful tool for the investigation of many body problems and also atomic quantum optics At the end of each chapter there are several solved problems which can help the students to put into practice the things they learned *The Method of Local Perturbations in*

the Theory of Nanosystems Alexander M. Ermolaev, Georgiy I. Rashba, 2022-07-29 The book is devoted to the description of physical effects caused by resonant scattering of quasiparticles by isolated impurity atoms which can localize electrons and phonons in nanosystems It takes as its starting point the model of local perturbations by I M Lifshits within which short range impurity atoms are located at random points of the system The role of a single impurity center in such systems increases with

decreasing size This book presents the first ever application of the method of local perturbations to describe the physical properties of a wide range of nanosystems **Nonequilibrium Many-Body Theory of Quantum Systems** Gianluca Stefanucci, Robert van Leeuwen, 2013-03-07 A pedagogical introduction to nonequilibrium theory time dependent phenomena and excited state properties for graduate students and researchers *The Nuclear Cooper Pair* Grégory Potel Aguilar, Ricardo A. Broglia, 2021-10-28 This monograph presents a unified theory of nuclear structure and nuclear reactions in the language of quantum electrodynamics Feynman diagrams It describes how two nucleon transfer reaction processes can be used as a quantitative tool to interpret experimental findings with the help of computer codes and nuclear field theory Making use of Cooper pair transfer processes the theory is applied to the study of pair correlations in both stable and unstable exotic nuclei Special attention is given to unstable exotic halo systems which lie at the forefront of the nuclear physics research being carried out at major laboratories around the world This volume is distinctive in dealing in both nuclear structure and reactions and benefits from comparing the nuclear field theory with experimental observables making it a valuable resource for incoming and experienced researchers who are working in nuclear pairing and using transfer reactions to probe them From Nuclei and Their Constituents to Stars A. Molinari, L. Riccati, W.M. Alberico, 2003-07-31 This book focuses on the ideas to embed nuclear physics in the larger context of hadronic physics by stressing and deepening its widening overlap with particle astroparticle and condensed matter physics and to emphasize the unity of the two facets not only of nuclear but of the whole physics the theoretical and the experimental ones Counteracting the ominous trend of enlarging the gap between the two the danger being of depriving experimental physics of ideas promoting experiments and of transforming theoretical physics into metaphysics The reader will find modern conceptions on nuclear structure how atomic nuclei are probed through the scattering of high energy electrons and how they interact when accelerated at ultra relativistic energies The item connects to the quest for the quark gluon plasma perhaps the central theme of the contemporary hadronic physics whose unraveling requires a vast and profound knowledge of both nuclear and particle physics in particular QCD Applied Parallel and Scientific Computing Pekka Manninen, Per Öster, 2013-02-12 This volume constitutes the refereed proceedings of the 11th International Conference on Applied Parallel and Scientific Computing PARA 2012 held in Helsinki Finland in June 2012 The 35 revised full papers presented were selected from numerous submissions and are organized in five technical sessions covering the topics of advances in HPC applications parallel algorithms performance analyses and optimization application of parallel computing in industry and engineering and HPC interval methods In addition three of the topical minisymposia are described by a corresponding overview article on the minisymposia topic In order to cover the state of the art of the field at the end of the book a set of abstracts describe some of the conference talks not elaborated into full articles Theoretical Nuclear Physics in Italy S. Boffi, 2003 The 9th Conference on Problems in Theoretical Nuclear Physics was organized as part of the project Theoretical Physics of Nuclei and Many Body

Systems involving 17 Italian universities and sponsored by the Italian Ministry of Research and University This volume includes the invited papers on the main subjects of the project and all the individual contributions on special topics It reviews the work performed in the last two years by the participating Italian community of nuclear theorists In addition national and international perspectives are focussed by a panel on the future programmes of the large Italian laboratories and of the experimental community as well as in a general review by A Faessler *Condensed Matter Theories* M.
