Poovan Banana:

Towards management of Musa nematodes in Asia and the Pacific , Green synthesis of copper and zinc nanoparticles using different varieties of banana starch, latex and sap and evaluation of their antifungal activity against Fusarium oxysporum cubense Prem Jose Vazhacharickal, Ellamplackill Surya Santhosh , Sajeshkumar N.K, Jiby John Mathew, P. E. Sreejith, M. Sabu, Soil borne diseases which are caused to various plants include a wide variety of soil microbes like fungi and bacteria among which Fusarium wilt is one such disease caused by Fusarium oxysporum cubense in banana plants Wilt disease or the Panama disease of plant is among the most destructive disease of banana in the tropics and even the control methods like field sanitation soil treatments and crop rotations have not been a long term control for this disease An alternative method of treating Fusarium oxysporum was adopted by using various banana parts mainly its peel pulp sap and its latex of varieties such as Robusta B1 Musa acuminate Colla AAA Etha B2 Musa x paradisiaca AAB Poovan B3 Musa x paradisiaca AAB Sundari B4 Musa acuminate Colla AA Njalipoovan B5 Musa acuminate Colla AB Palayamkodan B6 Musa x paradisiaca AAB Kannan B8 Musa acuminate Colla AAA Pachakadali B9 Musa acuminate Colla AAA Nanoparticles are small particles with a dimension of 10⁹ and 10¹⁰ Green synthesis is a new method developed for the synthesis of nanoparticles which is small in size large surface area and eco friendly Leaf extracts of these plants were used for synthesis of copper and zinc nanoparticles as nanoparticles are powerful antimicrobial agents The results shows that dry skin and fruit extracts of Palayamkodan Njalipoovan Etha Pachakadali with solvents propane ethanol methanol and acetone and the fresh extract latex and sap of Palayamkodan and Poovan with solvents isopropanol ethanol methanol with 1:10 and 1:50 dilution are used for the synthesis of copper and zinc nanoparticles Copper and zinc nanoparticle shows greater antifungal activity than copper sulphate and zinc sulphate respectively and dry extract The maximum zone of inhibition was at 50 and 100 l for all the test plates This indicates that the zone of inhibition increases with as the concentration of nanoparticles increased An overall result showed that ethanol methanol and isopropanol could be used as a good solvents and skin of Njalipoovan and Etha could be used for controlling the Fusarium oxysporum cubense under invitro conditions

Current Advances in Mechanical Engineering Saroj Kumar Acharya, Dipti Prasad Mishra, 2021-03-18 This book presents select proceedings of the International Conference on Recent Advances in Mechanical Engineering Research and Development ICRAMERD 2020 The contents focus on latest research and current problems in various branches of mechanical engineering Some of the topics discussed here include fracture and failure analysis fuels and alternative fuels combustion and IC engines advanced manufacturing technologies powder metallurgy and rapid prototyping industrial engineering and automation supply chain management design of mechanical systems vibrations and control engineering automobile engineering fluid mechanics and machines heat transfer composite materials micro and nano engineering for energy storage and conversion and modeling and simulations The wide range of topics presented in this book can make it useful for beginners researchers as well as

professionals in mechanical engineering , Banana: Genomics and Transgenic Approaches for Genetic Improvement Sukhada Mohandas, Kundapura V. Ravishankar, 2016-09-08 Bananas and plantains are among the most important food and cash crops in the world They are cultivated in more than 135 countries across the tropics and subtropics with an annual global production of ca 130 million metric tonnes Though bananas are one of the most important components of food security in many developing countries banana production is threatened by both abiotic and biotic stresses These include a wide range of diseases and pests such as bunchy top virus burrowing nematodes black Sigatoka or black leaf streak Fusarium wilt etc In recent years considerable progress has been made and several biotechnological and genomic tools have been employed to help understand and unravel the mysterious banana genome Molecular and genomic studies have helped to decipher the Musa genome and its evolution Genetic linkage map and whole genome sequencing of both Musa acuminata and Musa balbisiana progenitors of cultivated banana have completely changed the way of thinking and the approach on banana crop improvement Whole genome sequencing has helped to improve the selection of quantitative traits such as yield as well as the selection of optimal parents for developing required hybrids in breeding programs Gene isolation and the analysis of mutants have helped in the characterization of genes of agronomic value and the associated regulatory sequences With the advent of molecular markers and new statistical tools it is now possible to measure the diversity identify genes and useful alleles linked to important agronomic traits Further these alleles can be incorporated into cultivars through marker assisted selection or through transgenic approach Transgenic approaches are potential tools for direct transfer of these genes into popular cultivars which are generally not amenable for conventional breeding techniques in specific with crops such as bananas which are sterile triploid and heterozygous thereby making it difficult to reconstruct the recurrent genotypes in banana Transgenic techniques thus have helped overcome the difficulty of working with sterile triploid banana crop In the last five years enormous amount of new information and techniques have been generated for banana A comprehensive book entitled Banana Genomics and Transgenic Approaches for Genetic improvement on banana genomics latest transgenic technologies and tools available for improved crop development in banana will address all these requirements Characterization and nutritional analysis of commonly cultivated banana varieties in Kerala: an overview Prem Jose Vazhacharickal, Eldho Mathews Bobby , Sajeshkumar N.K, Jiby John Mathew, P. E Sreejith, M. Sabu, Banana is one of the most common and widely used food all over the universe from ancient time In this work mainly the nutrition analysis of various commonly cultivated banana varieties in Kerala has been used such as Najalipoovan Poovan Etha Palenkodan Robesta Chemkadali Pachakadhali Sundari and Kannan The peel contain about 40% of weight of banana fruit it s nutrition analysis is been also done to analyse various contents of significance Further there is chance of occurrence of nutrients in peel since banana fruit is rich in various nutrients And the peel of banana a biomass just discarded into nature can thus be converted to various value added products like drugs soaps animal feed etc It is been observed that these peel is source of various natural antioxidants dietary fibre

crude fat and crude protein On analysis Pachakadali fruit has highest moisture content and moisture content of peel is highest for Etha Crude protein content of fruit and peel is highest for Kannan Crude fibre content of fruit is highest for Kannan and crude protein content of peel is highest for Sundari Ether extract in fruit and peel is highest for Kannan Total ash content of fruit is highest for Kannan and ash content of peel is more for Pachakadali Gross energy of fruit is highest in case of Najalipoovan fruit and gross energy of peel is highest for Robesta On comparing these varieties on the basis of test result Kannan is the most superior variety on the basis of nutritional quality Further on analysing test results it has been found that the peel has superior nutrient and moisture content So from the analysis it is revealed that one of the most useful part of a banana is its peel By the above analysis one can easily understand importance of many varieties of banana and further detailed researches can extend the scope of study

Banana Peels Valorization Mejdi Jeguirim, Besma Khiari, 2024-05-21 Banana Peels Valorization Sustainable and Eco friendly Applications provides a global overview of world production physicochemical and microbiological characteristics of Banana Peels and the various pathways for their valorization considering the advantages disadvantages and factors impacting on each way of valorization Each chapter deals with sustainable applications based on the sector category Such structure helps the audience from a specific field to easily identify the specific application Successful case study of a banana processing by products valorization is also presented Written by a team of interdisciplinary experts this is the ultimate valuable resource for agricultural or food engineers who work in the banana groves and in the banana processing industry and also for Researchers working in correlated areas of food environmental and energy fields Provides a global overview of world production physicochemical and microbiological characteristics of banana peels Explores banana tree and fruit wastes including their quantification and classification Discusses each sustainable application of banana peels in a specific chapter based on the sector category

Comparative study using banana peel and male flower as substrates for amylase production using *Aspergillus niger* in Kerala: an overview Prem Jose Vazhacharickal, Jiby John Mathew, Tombin Thomas, Sajeshkumar N. K, P. E. Sreejith, M. Sabu, Amylases are well known for applications ranging from starch and food processes industry to medical applications The increased demand for these enzymes in various industries has led to an enormous interest in developing enzymes with better properties such as raw starch degrading amylases It is suggested that banana peel and male inflorescence could employ as a promising substrate for the production of amylase by *Aspergillus niger* Further solid state fermentation is a better choice for amylase production The addition of external growth medium is also found beneficial for increasing enzyme production The present study was undertaken to isolate identify and characterize the *Aspergillus niger* in the culture medium followed by amylase production and extraction The banana parts used here as substrates are ripe fruit peel and male inflorescence from locally cultivated species Ethan Nendran Palayamkudan Palayanthodan Rasakadali Njali Poovan and Sundari The result shows that amylase from sundari peel have the best activity followed by Ethan peel Ethan flower bud shows the least activity
