Ryley Albert C. Dawson,2010-01-27 RYLEY and OTHER STORIES OF ADVENTURE THE STORIES The dominant focus in these stories as in the first collection entitled LIFE AT STAKE continues to be the human will to struggle and survive Such struggle in moments of crisis not only defines and shapes who the person is but reveals how he or she developed as a person and who they will be in the future pending their survival Each story portrays at least one aspect of the courage required to confront and hopefully to conquer imminent danger Some win some lose That is the normal human equation but it is of utmost interest to us as readers to observe how that person coped each of us hoping that we might discover within ourselves traits of the protagonists character that would allow us to act heroically if found in similar circumstances The exploration and settling of the western frontier and the inspiring and inflammatory events of the Civil War provide the setting for each grouping of adventures

Cathie Hilterbran Cooper, 1997 A comprehensive annotated guide to 663 counting books divided into ten subject areas Each section includes a description of the subject area an annotated bibliography of related books and a number of activities that can be used in connection with counting and math books Reproducible activity pages are included in each section *City at the Water's Edge* Betsy McCully, 2007 Concrete floors and concrete walls buildings that pierce the sky taxicabs and subway corridors a steady din of noise These things along with a virtually unrivaled collection of museums galleries performance venues media outlets international corporations and stock exchanges make New York City not only the cultural and financial

capital of the United States but one of the largest and most impressive urban conglomerations in the world. With distinctions like these, is it possible to imagine the city as any more than this? *City at the Water's Edge* invites readers to do just that. Betsy McCully, a long-time urban dweller, argues that this city of lights is much more than a human-made metropolis. It has a rich natural history that is every bit as fascinating as the glitzy veneer that has been built atop it. Through twenty years of nature exploration, McCully has come to know New York as part of the Lower Hudson Bioregion, a place of salt marshes and estuaries, sand dunes and barrier islands, glacially sculpted ridges and kettle holes, rivers and streams, woodlands and outwash plains. Here she tells the story of New York that began before the first humans settled in the region twelve thousand years ago and long before immigrants ever arrived at Ellis Island. The timeline that she recounts is one that extends backward half a billion years; it plumbs the depths of Manhattan's geological history and forecasts a possible future of global warming with rising seas lapping at the base of the Empire State Building. Counter to popular views that see the city as a marvel of human ingenuity diametrically opposed to nature, this unique account shows how the region has served as an evolving habitat for a diversity of species, including our own. The author chronicles the growth of the city at the expense of the environment but leaves the reader with a vision of a future city as a human habitat that is brought into balance with nature.
