Mathematical Instruction, 1908-2008: People, Events, and Challenges in Mathematics Education Fulvia

Furinghetti, Livia Giacardi, 2023-01-30 The book presents the history of ICMI through a prosopographical approach. In other words, it pays a lot of attention to the actors of the International movement. The portraits of the members of the ICMI Central Committees 1908-1936 and ICMI Executive Committees 1952-2008 and other eminent figures in ICMI history who have passed away in the first 100 years of its life are the guiding thread of the volume. Each portrait includes Biographical information, An outline of the various contributions made by the individual in question to the study of problems pertaining to mathematics teaching education, Primary bibliography, Secondary with particular attention to the publications concerning the teaching of mathematics, Images, photos, book frontispieces, relevant manuscripts. The authors of the portraits, 30 altogether, are researchers in the history of mathematics, mathematics and mathematics education. The focus on the officer's role within ICMI and on his/her contributions to mathematics education make the portraits different from usual biographies. In particular, since most officers were active mathematicians, the portraits shed light on aspects of their lesser-known activity. Connecting chapters place the action of these figures in the historical context and in the different phases of ICMI history. *Putting Two*

and Two Together Burkard Polster, Marty Ross, 2021-12-10 *Putting Two and Two Together* is a humorous and quirky collection of unusual, ingenious, and beautiful morsels of mathematics. Authors Burkard Polster (YouTube's Mathologer) and Marty Ross delve into mathematical puzzles and phenomena in engaging stories featuring current events, sports, and history, many flavored with a distinctive bit of Australiana. Each chapter ends with puzzles to ponder that will spur further reflection. These stories were written for a general audience and originally appeared in the Maths Masters column in *The Age* newspaper. The book offers mathematical entertainment for curious readers of all ages and assumes a minimum of mathematical background. Polster and Ross are masters of the genre; this book represents a cornucopia of offerings from across the mathematical spectrum. Their articles are entertaining, captivating, and informative and will appeal to everyone from interested amateurs to old pros. On top of all that, the prose is clear, concise, and a lot of fun, happily with a charmingly Aussie flavor. Crack the spine and enjoy! Michael Berg, Loyola Marymount University, Los Angeles. The American Mathematical Society must be congratulated on publishing a singularly amusing synthesis of cultural anthropology coupled with mathematical entertainment. Tushar Das, University of Wisconsin-La Crosse. Polster and Ross are as good as the original master, Martin Gardner. They are also as good as that other great popularizer of mathematics, Ian Stewart, who took up Gardner's mantle and as good as Douglas Hofstadter, who also followed in Gardner's footsteps as popularizers of mathematics within regular columns in *Scientific American* and elsewhere. I recommend this new book very highly. Like Poster and Ross's first collection of columns, it is one that you can happily read from cover to cover or dip into at any random point and find treasures. You will then often return, savouring and often laughing while also learning and responding to thoughtful challenges. John Gough Deakin, University Geelong, Australia. **Imagine Math 8** Michele Emmer, Marco
