

Population, Land Use, and Environment: A Long History

M. Gordon Wolman

We can surmise that human beings have been altering the environment throughout the several million years they have inhabited the earth. Artifacts testify to the distribution and intensity of these alterations. Moreover, some reconstructions of human population numbers over time suggest step-like increases in the number of people on the globe with the advent of successive major technological revolutions including the domestication of animals, the advent of agriculture, and the Industrial Revolution. Brief vignettes of the distribution of human activities at selected moments in history coupled with estimates of the kinds of impacts these activities apparently made on the environment provide a perspective on the modern scene. Despite large changes in land and environment in the past, the evidence suggests that the modern global combination of a very large population base, relatively rapid rates of population growth, and very rapid rates of technological change constitute a unique assemblage in human history, an assemblage posing new hurdles to adaptation and enhancing the rate of change.

NATURAL PROCESSES AND ANTHROPOGENIC IMPACTS

Because the earth is a dynamic system, changes to the land, water, and air caused by human activities must be seen in this dynamic context. Not only are there cycles of land formation and denudation, oscillations of continents and oceans, and movements of water and air at scales ranging from

Population And Land Use In Developing Countries Report Of A Workshop:

Population and Land Use in Developing Countries National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Population, 1993-02-01 This valuable book summarizes recent research by experts from both the natural and social sciences on the effects of population growth on land use. It is a useful introduction to a field in which little quantitative research has been conducted and in which there is a great deal of public controversy. The book includes case studies of African, Asian, and Latin American countries that demonstrate the varied effects of population growth on land use. Several general chapters address the following timely questions: What is meant by land use change? Why are ecological research and population studies so different? What are the implications for sustainable growth in agricultural production? Although much work remains to be done in quantifying the causal connections between demographic and land use changes, this book provides important insights into those connections and it should stimulate more work in this area. Preston, Carole L. Jolly, Barbara Boyle Torrey, 1993 **Population, Land Use, and Environment** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Economics, Governance, and International Studies, Committee on the Human Dimensions of Global Change, Panel on New Research on Population and the Environment, 2005-10-15 *Population Land Use and Environment Research Directions* offers recommendations for future research to improve understanding of how changes in human populations affect the natural environment by means of changes in land use such as deforestation, urban development, and development of coastal zones. It also features a set of state-of-the-art papers by leading researchers that analyze population-land-use-environment relationships in urban and rural settings in developed and underdeveloped countries and that show how remote sensing and other observational methods are being applied to these issues. This book will serve as a resource for researchers, research funders, and students. **The Rural to Urban Transition in Developing Countries** Amrutha Mary Varkey, 2023-04-10 Increasing urbanisation and industrial development are occurring at the expense of shrinking forest cover and agricultural land in South Asia. Various land uses compete with each other, reducing forests and farmlands. This book addresses urbanisation and peri-urban land markets with a special focus on Bangalore, one of the fastest growing cities in South Asia. It contributes to historic perspectives on the spatial transformation of peri-urban locales as well as providing much needed empirical evidence. The book discusses issues related to the context of peri-urban land use, land transactions, demand-supply relationships, and land prices in the peri-urban land market. The steep rise in land prices, the periphery, rapid changes in land use patterns, active land transactions, growth of the real estate market, and the challenge to implement efficient land use regulations are explored with the help of field evidence. Insights and challenges to land administration addressed in this book are common to other metropolitan cities, and the key message is that a separate peri-urban land policy is required for the major metropolitan cities of India and other

developing countries The book contributes to the understanding of how these spatial markets function in order to work towards an improved implementation of land policy in the context of dynamic rural urban periphery As such it will appeal to researchers scholars and students of regional urban and agricultural economics economic geography urban and regional planning and environmental science It will also be of great interest to city planners and policy makers action based think tanks focused on urban governance

Urban Growth and Land Degradation in Developing Cities Roy

Maconachie,2016-02-11 The peri urban interface in poor countries is frequently an area of great dynamism and a focus of competition for basic resources In Nigeria peri urban livelihood strategies have become an increasingly important survival mechanism in the context of rapid urban growth This book uses an innovative combination of methodologies from both the natural and social sciences to examine recent developments in and around the city of Kano in northern Nigeria and in doing so provides insights into the sustainability of these livelihood strategies Identifying some of the most significant forces that are currently shaping the process of peri urban change it argues that despite the adoption of creative and ingenious strategies by many farmers urban growth is having a considerable effect on the livelihood resilience of individuals households and communities The findings presented in this book have much wider relevance and are transferable to other burgeoning Third World cities where increased pressures on urban hinterlands have intensified contests amongst various actors made access to resources much more difficult and made traditional smallholder mechanisms of adaptation and resilience increasingly challenging

Countries D. O. Hall,G. W. Barnard,P. A. Moss,2013-10-22 Biomass for Energy in the Developing Countries Current Role Potential Problems Prospects focuses on biomass energy and its importance to developing countries This book outlines the reality that supply can no longer meet the demand of this form of energy This fact is particularly observed in the rising price of oil which is a prime source of energy for developing countries Relative to this a need to look for indigenous energy sources is urgent to sustain development in these countries This book emphasizes that biomass energy utilization differs among developing countries which shows the variance in energy needs This text also notes that the pattern of biomass energy use in such countries is related to agriculture and also has cultural economic and social linkages Biomass energy is also considered

an important aspect in rural development and as a replacement for petroleum products With the impending shortage of biomass energy schemes are now being developed to sustain the use of this energy in household and industry settings which is emphasized in the development of equipment considered energy efficient People who are concerned with the development and implementation of programs aimed at conserving biomass energy and in the search of alternative energy can use this book as a reference

Voices from the Forest Malcolm Cairns, 2010-09-30 This handbook of locally based agricultural practices brings together the best of science and farmer experimentation vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity Environmentalists have tended to disparage shifting cultivation sometimes called swidden cultivation or slash and burn agriculture as unsustainable due to its supposed role in deforestation and land degradation However a growing body of evidence indicates that such indigenous practices as they have evolved over time can be highly adaptive to land and ecology In contrast scientific agricultural solutions imposed from outside can be far more damaging to the environment Moreover these external solutions often fail to recognize the extent to which an agricultural system supports a way of life along with a society's food needs They do not recognize the degree to which the sustainability of a culture is intimately associated with the sustainability and continuity of its agricultural system Unprecedented in ambition and scope *Voices from the Forest* focuses on successful agricultural strategies of upland farmers More than 100 scholars from 19 countries including agricultural economists ecologists and anthropologists collaborated in the analysis of different fallow management typologies working in conjunction with hundreds of indigenous farmers of different cultures and a broad range of climates crops and soil conditions By sharing this knowledge and combining it with new scientific and technical advances the authors hope to make indigenous practices and experience more widely accessible and better understood not only by researchers and development practitioners but by other communities of farmers around the world

The Demographic Transition and Development in Africa Charles Teller, Assefa Hailemariam, 2011-03-04 The heated Malthusian Bosrupian debates still rage over consequences of high population growth rapid urbanization dense rural populations and young age structures in the face of drought poverty food insecurity environmental degradation climate change instability and the global economic crisis However while facile generalizations about the lack of demographic change and lack of progress in meeting the MDGs in sub Saharan Africa are commonplace they are often misleading and belie the socio cultural change that is occurring among a vanguard of more educated youth Even within Ethiopia the second largest country at the Crossroads of Africa and the Middle East different narratives emerge from analysis of longitudinal micro level analysis as to how demographic change and responses are occurring some more rapidly than others The book compares Ethiopia with other Africa countries and demonstrates the uniqueness of an African type demographic transition a combination of poverty related negative factors unemployment disease food insecurity along with positive education health and higher age of marriage trends that are pushing this ruggedly rural and land locked population to accelerate the

demographic transition and stay on track to meet most of the MDGs This book takes great care with the challenges of inadequate data and weak analytical capacity to research this incipient transition trying to unravel some of the complexities in this vulnerable Horn of Africa country A slowly declining population growth rates with rapidly declining child mortality very high chronic under nutrition already low urban fertility but still very high rural fertility and high population resource pressure along with rapidly growing small urban places
