Degen, 2012-12-06 Since small mammals have a large surface to mass ratio one would expect them to quickly dehydrate and perish at high environmental temperatures Nonetheless a large number of small mammal species inhabit deserts This fascinating phenomenon is investigated by Prof A Allan Degen in his book The majority of small desert mammals are rodents but shrews of several grams and small foxes of 1 kg are also present Their survival is due mainly to behavioural adaptations and habitat selection however physiological adaptations also contribute to the success Interestingly many small mammals that live in different deserts of the world show similarities in their adaptive traits although they have different taxonomic affinities

**Functioning and Management** D. W. Goodall, R. A. Perry, K. M. W. Howes, 2009-03-19 This volume was first published in 1981 The history of man's use of arid lands is a sad record of deterioration of the natural resource base and of low and declining living standards for the 300 million people who live in them One prerequisite to meeting the challenge of reversing the deterioration and of raising living standards is a sound knowledge of the natural ecosystems

**Rodent Societies** Jerry O. Wolff, Paul W. Sherman, 2008-09-15 Rodent Societies synthesizes and integrates the current state of knowledge about the social behavior of rodents providing ecological and evolutionary contexts for understanding their societies and highlighting emerging conservation and management strategies to preserve them It begins with a summary of the evolution phylogeny and biogeography of social and nonsocial rodents providing a historical basis for comparative analyses Subsequent sections focus on group living rodents and characterize their reproductive behaviors life histories and population ecology genetics neuroendocrine mechanisms behavioral development cognitive processes communication mechanisms cooperative and uncooperative behaviors antipredator strategies comparative socioecology diseases and conservation Using the highly diverse and well studied Rodentia as model systems to integrate a variety of research approaches and evolutionary theory into a unifying framework Rodent Societies will appeal to a wide range of disciplines both as a compendium of current research and as a stimulus for future collaborative and interdisciplinary investigations

Habitat Preferences and Distribution of Mammals in California Chaparral Ronald D. Quinn, 1990 Forty nine species of mammals regularly occur in California chaparral but none lives only in chaparral Among the 49 species 7 are found primarily in mature chaparral 9 in young chaparral or along ecotones between chaparral and other plant communities and 19 in riparian areas Five species occur in many habitats but prefer chaparral in California and 9 have wide ranges that encompass many communities including chaparral By altering the structure of the plant community fire in chaparral is important in determining the distribution and abundance of mammalian populations Fire is not permanently destructive to the mammalian fauna Wildlife habitat can be optimized by maintaining chaparral in many age classes by restricting fuel reduction treatments to 1 to 100 ha by protecting all trees and by enhancing water sources A given area of chaparral contains two to four common and two to nine total species of rodents Seeds fruits and young vegetative growth are the most important plant foods in chaparral Only 12 species of mammals are endemic to chaparral because of the limited opportunity in both time and space for speciation to occur Only kangaroo rats Dipodomys and chipmunks Eutamias have speciated in chaparral

Social Behavior P. Bateson, 2013-06-29 Sociobiology is the play of the season Its success is measured by its immense popularity and perhaps by the controversy it has generated as well Unfortunately neither its popularity nor the resulting controversy seems likely to assure progress toward understanding sociobiological issues The play has too many actors and it seems the casting has been poor the players are unable to maintain their roles At center stage of course is E O Wilson and his monumental opus Sociobiology 1 In the wings and making periodic entrances are an assortment of brilliant committed and aggressive

adversaries On cue one of them steps out and decries the self fulfilling nature of sociobiological prophesies The arguments of the adversaries are varied They warn that if all nonhuman primate societies tolerate aggression and man is also a primate then aggression may come to be considered normal and therefore acceptable Their dire warnings may also have real impact on policy altering for example a research program intended to examine longitudinally the relation between a supernumerary chromosome and certain behavioral disorders The rationale is that since the afflicted infants would have to be identified and the study obviously does assume that psychopathology is linked to the chromosome aberration the attitudes of the child's parents could well contribute to abnormal behavior that might otherwise not appear

**Evolution of Desert Biota** David W. Goodall, 2014-07-09 Written by specialists in the field the papers in this volume explore evolution of animals and plants on the deserts of North America South America and Australia Together the articles constitute a complete survey of the geological history of the deserts of three continents the evolution of the animals and plants of those deserts and their adaptations to the environments in which they live The first paper by Otto T Solbrig discusses the flora of the South American temperate and semidesert regions citing numerous genera and reasons that they are found in the different areas John S Beard uses the same approach in his discussion of the evolution of Australian desert plants and focuses on western Australian areas Guillermo Sarmiento appraises the evolution of arid vegetation in tropical America including the Lesser Antilles and the Coast Range of Venezuela and Colombia A R Main surveys the adaptation of Australian vertebrates to desert conditions and gives examples of how various species of birds reptiles and amphibians adapt to their environment in order for the greatest number to survive James A MacMahon designates specific communities in the Mojave Sonoran and Chihuahuan deserts and discusses the similarity of species of the North American desert mammal faunas found there while Bobbi S Low focuses on the evolution of amphibian life histories in the desert and compiles a lengthy table of amphibia comparing egg size habitat number of eggs per clutch and so forth Finally W Frank Blair treats adaptation of anurans to equivalent desert scrub of North and South America and cites various species of frogs and toads that are found in similar areas The volume also includes an introduction by the editor and an index Evolution of Desert Biota is the result of a symposium held during the First International Congress of Systematic and Evolutionary Biology in Boulder Colorado in August 1973

**Technical Note** ,1980 **Monogamy** Ulrich H. Reichard, Christophe Boesch, 2003-09-11 Why do males of some species live with a single mate when they are capable of fertilizing more than one female's eggs Why do some females pair only with one male and not with several partners Why do birds usually live in pairs and feed chicks together whilst mammals often live in larger groups with females rearing their young without male help These questions form the central theme of this book Social monogamy is a complex multi faceted phenomenon that does not always correspond with reproductive monogamy so a paired male may not necessarily be raising his own offspring Exploring the variables influencing and maintaining the fascinating diversity of social sexual and reproductive monogamous partnerships in birds mammals and

humans this book provides clues to the biological roots of monogamy for students and researchers in behavioural ecology evolutionary anthropology primatology zoology and ornithology      Packrat Middens Julio L. Betancourt, Thomas R. Van Devender, Paul S. Martin, 2021-11-16 Over the past thirty years late Quaternary environments in the arid interior of western North America have been revealed by a unique source of fossils well preserved fragments of plants and animals accumulated locally by packrats and quite often encased amberlike in large masses of crystallized urine These packrat middens are ubiquitous in caves and rock crevices throughout the arid West where they can lie preserved for tens of thousands of years More than a thousand of these deposits have been dated and analyzed and middens have supplanted pollen records as a touchstone for studying vegetation dynamics and climatic change in radiocarbon time the last 40 000 years Now similar deposits made by other mammals like hyraxes are being reported from other parts of the world This book brings together the findings and views of many of the researchers investigating fossil middens in the United States Mexico Africa the Middle East and Australia The contributions serve to open a forum for methodological concerns update the fossil record of various geographic regions introduce new applications and display the vast potential for fossil midden analysis in arid regions worldwide The findings presented here will serve to foster regional research and to promote general studies devoted to global climate change Included in the text are more than two hundred charts photographs and maps      **Mammalogy** , Annals of the Carnegie Museum Carnegie Museum, 1982      *Final Environmental Impact Statement for the Construction and Operation of an LNG Import Terminal at Oxnard, California* United States.
