Population Exposure From The Nuclear Fuel Cycle:

Population Exposure from the Nuclear Fuel Cycle Edward L. Alpen, R. O. Chester, Darrell R. Fisher, 1988

Population Exposure from the Fuel Cycle, 1987 The legacy of radiation exposures confronting man arises from two historical sources of energy the sun and radioactive decay Contemporary man continues to be dependent on these two energy sources which include the nuclear fuel cycle Radiation exposures from all energy sources should be examined with particular emphasis on the nuclear fuel cycle incidents such as Chernobyl and Three Mile Island In addition to risk estimation concepts such as de minimis life shortening as a measure of risk and competing risks as projected into the future must be considered in placing radiation exposures in perspective The utility of these concepts is in characterizing population exposures for decision makers in a manner that the public may judge acceptable All these viewpoints are essential in the evaluation of population exposure from the nuclear fuel cycle
