White Bones Chris Else, 2010-12-01 From one of New Zealand's most thoughtful writers not just a finely crafted novel but a whole country complete with dark undertones Kit Wallace has spent his whole life running away Through luck and lack of purpose he has finally washed up in the Pacific nation of Ventiak Here on the top floor of the Royal Albert Hotel he avoids his past by drinking whisky and writing poetry he fully intends no one should ever read Yet despite himself he has been drawn into the lives of the people around him When he is invited to join a scam in the phosphate industry which will defraud the Ventiakans of millions of dollars he is torn between disbelief self serving cynicism and a loyalty that takes him by surprise His life begins to unravel and he is forced into action Meanwhile in the upland forest the Rage is beginning a periodic rampage of millions of ants that will sweep over the island carrying all before it In this his fifth novel Chris Else has created an utterly convincing Polynesian setting with its own brilliantly realised language culture flora and fauna His humour and wisdom are at once merciless and forgiving as he uses language to explore man's and woman's deep seated need to be both an individual and to belong

Steps to Facilitate Principal-Investigator-Led Earth Science Missions

National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Earth Studies, 2004-04-21 Principal investigator PI Earth science missions are small focused science projects involving relatively small spacecraft The selected PI is responsible for the scientific and programmatic success of the entire project A particular objective of PI led missions has been to help develop university based research capacity Such missions however pose significant challenges that are beyond the capabilities of most universities to manage To help NASA's Office of Earth Science determine how best to address these the NRC carried out an assessment of key issues relevant to the success of university based PI led Earth observation missions This report presents the result of that study In particular the report provides an analysis of opportunities to enhance such missions and recommendations about whether and if so how they should be used to build university based research capabilities Assessment of Mission Size Trade-offs for NASA's Earth and Space Science Missions

National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Ad Hoc Committee on the Assessment of Mission Size Trade-offs for Earth and Space Science Missions, 2000-08-31 Assessment of Mission Size Trade offs for NASA's Earth and Space Science Missions addresses fundamental issues of mission architecture in the nation's scientific space program and responds to the FY99 Senate conference report which requested that NASA commission a study to assess the strengths and weaknesses of small medium and large missions This report evaluates the general strengths and weaknesses of small medium and large missions in terms of their potential scientific productivity responsiveness to evolving opportunities ability to take advantage of technological progress and other factors that may be identified during the study identifies which elements of the SSB and NASA science strategies will require medium or large missions to accomplish high priority science objectives and recommends general principles or criteria for evaluating the mix of mission sizes in Earth and space science programs Assessment of Mission Size Trade offs for NASA's Earth and Space Science Missions considers not only scientific technological and cost trade offs but also institutional and structural issues pertaining to the vigor of the research community government industry university partnerships graduate student training and the like Earth's Crust Jennifer Lawson, 2004 The 12 lessons in this module introduce students to concepts related to the characteristics of the earth's crust including continental drift plate tectonics mountain formation volcanoes and earthquakes Students investigate the rock cycle erosion and soil formation and explore the extraction of resources from the earth's crust and the environmental impact of the mining industry Also included Materials lists Activity descriptions Questioning techniques Activity centre and extension ideas Assessment suggestions Activity sheets and visuals The module offers a detailed introduction to the Hands On Science program guiding principles implementation guidelines an overview of the skills that young students use and develop during scientific inquiry a list of children's books and websites related to the science topics introduced and a classroom assessment plan with record keeping templates *Clean Energy*

Clean Energy

from the Earth, Wind and Sun William S. Pintz, Hermina Morita, 2016-11-21 This book documents the socio environmental context and early history of Hawaii's attempt to substitute renewable energy sources and energy efficiency measures for oil imports. It identifies areas of policy formulation where clean energy strategies were effective and areas where the state's policy strategy was either inappropriate or constrained by political or institutional factors. Although Hawaii's Clean Energy Initiative is a unique partnership formulated to meet Hawaii's specific needs and resources, the policy process addressed problems that are common outside the state. While the case study involves clean energy policies, many of the issues are applicable to public policy development topics in other sectors. Examples of these general interest policy topics include understanding how the political and socioeconomic climate may influence policy assumptions, formulating a regulatory and legal framework for monitoring policy compliance, designing and understanding the implications of subsidy and tax incentive policies, managing conflicts with policies in other sectors, addressing the interests of existing and future stakeholders, creating strategies for public consultation and information dissemination using external expertise from government agencies, academic institutions and private consultants, designing performance and evaluation metrics for measuring progress. The book is intended for use in graduate and senior undergraduate courses dealing with the formulation, implementation and impact of public policy. It also provides researchers involved in the development and implementation of clean energy with a guide to the hurdles likely to be encountered in moving innovation from the technical sphere to the practical real world and how to overcome them. Professional policymakers may benefit from an example of a process to create a workable clean energy policy.

Earth at Risk Claude Henry, Laurence Tubiana, 2017-12-19 We are squandering our planet's natural capital, its biodiversity, water and soil, and climate stability at a blistering pace. Major changes must be made to steer our planet and people away from our current doomed course. Though technology has been one of the drivers of the current trend of unsustainable development, it is also one of the essential tools for remedying it. *Earth at Risk* maps out the necessary transition to sustainability, detailing the innovations in science and technology along with law, institutional design and economics that can and must be put to use to avert environmental catastrophe. Claude Henry and Laurence Tubiana begin with a measure of the costs of ecological damage: the erosion of biodiversity, air, water and soil pollution, and the wide reaching effects of climate change, and then consider the solutions that are either now available or close on the horizon and that may lead to a more sustainable global trajectory. What community driven or market based tools can be used to promote sustainable development? How can renewable energy and energy storage advances help us decrease our use of fossil fuels? How can we substitute agroecology for the damaging chemical methods of industrialized agriculture? Is international agreement on climate goals possible? Building on the experience of the most significant climate negotiation of the decade, *Earth at Risk* shows what a world organized along the principles of sustainability could look like, no matter how optimistic it may seem at the present moment. Though formidable obstacles remain to the realization of this significant transition, Henry

and Tubiana present the case for collective initiatives and change that build momentum for implementation and action

Earth: The Sequel: The Race to Reinvent Energy and Stop Global Warming Miriam Horn, Fred Krupp, 2009-03-16 How to harness the great forces of capitalism to save the world from catastrophe The forecasts are grim and time is running out but that's not the end of the story In this book Fred Krupp longtime president of Environmental Defense Fund brings a surprisingly hopeful message We can solve global warming And in doing so we will build the new industries jobs and fortunes of the twenty first century In these pages the reader will encounter the bold innovators and investors who are reinventing energy and the ways we use it These entrepreneurs are poised to remake the world's biggest business and save the planet if America's political leaders give them a fair chance to compete
