## **Sargon A Computer Chess Program:**

**Sargon, a computer chess program** Dan Spracklen, Kathe Spracklen, 1978 Computer Chess Compendium D. LEVY, 2013-06-29 For many years I have been interested in computer chess and have collected almost every learned paper and article on the subject that I could find My files are now quite large and a considerable amount of time effort and expense has been required to build up this collection I have often thought how difficult it must be for many computer chess enthusiasts to acquire copies of articles that they see referenced in some other work Unless one has access to a good reference library the task is almost impossible I therefore decided to try to make available in one volume as many as possible of the most interesting and important articles and papers ever written on the subject Such a selection is naturally somewhat subjective and I hope that I will not offend authors whose works have been excluded In particular I have decided to exclude any material which has appeared in the Journal of the International Computer Chess Association ICCA or in its precursor the ICCA Newsletter The reason is simply that the ICCA itself is in the process of compiling a compendium containing the most important material published in those sources For further information on ICCA membership and publications the reader is invited to contact Professor H 1 van den Herik or Dr Jonathan Schaeffer University of Limburg Computing Science Department of Computer Science University of Alberta 6200 MD Maastricht Edmonton Netherlands Alberta Canada T6G 2H1 *Chess Skill in Man and Machine* P. W. Frey, 2012-12-06 Ten years of intensive effort on computer chess have produced notable progress Although the background information and technical details that were written in 1975 for the first edition of this book are still valid in most essential points hardware and software refinements have had a major impact on the effectiveness of these ideas The current crop of chess machines are performing at unexpectedly high levels The approach epitomized by the series of programs developed by David Slate and Larry Atkin at Northwestern in the middle 1970s i e a sophisticated search algorithm using very little chess knowledge was expected to reach an asymptotic level of performance no higher than that of a class A player USCF rating between 1800 and 2000 This perspective was argued quite vigorously by Eliot Hearst in Chapter 8 of the first edition and was held at that time by many chess experts Subsequent events have clearly demonstrated that the asymptotic performance level for this type of program is at least as high as the master level USCF rating between 2200 and 2400 Current discussions now focus upon whether the earlier reservations were wrong in principle or simply underestimated the asymptote If there is a real barrier which will prevent this type of program from attaining a world championship level of performance it is not evident from the steady progress which has been observed during the last decade **The New Chess Computer Book** T. D. Harding, 2014-05-17 The New Chess Computer Book is a revised edition of The Chess Computer Book that contains more than 50 percent new material about chess playing microcomputers Since the first edition of the book was written there have been large numbers of machines launched some of which the author has been able to test over a long period Inevitably there are new chess playing microcomputers machines

and updated modules for older ones coming out all the time with launch dates for machines in different countries often being different due to commercial considerations However an attempt has been made to discuss in detail every top of the range machine available on the British market The book begins with a brief survey of the origins of chess computing and the development of chess playing machines This is followed by separate chapters on topics such as the types of machines that play chess modular chess computers computer hardware and software and developments in chess microcomputers in the latter half of 1984 All About Chess and Computers D. Levy,M. Newborn,2012-12-06 For some time now I have felt that the time is right to write a book about Computer Chess Ever since the first attempts at chess programming were made some twenty five years ago interest in the subject has grown from year to year During the late 1950s the subject was first brought to the attention of the public by an article in Scientific American and less than a decade later a chess program was competing in a tournament with humans More recently there have been tournaments in which the only participants were computer programs and when the first World Computer Championship was held in Stockholm in 1974 the event was an outstanding success Laymen often doubt the value of investing in a subject so esoteric as computer chess but there is definitely considerable benefit to be gained from a study of the automisation of chess and other intellectual games If it proves possible to play such games well by computer then the techniques employed to analyse and assess future positions in these games will also be useful in other problems in long range planning I have tried to make this book both interesting and instructive Those who understand anything at all about chess but who have no knowledge of computers will be able to follow my description of how computers play chess Those with a knowledge of both areas will still find much to interest them Computer Chess David E. Welsh,1984 InfoWorld ,1981-12-14 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects *PC Mag* ,1983-09 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology **Personal Computing** ,1986-10 **Dr. Dobb's Journal of Computer Calisthenics & Orthodontia** ,1980 **InfoWorld** ,1981-05-11 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects *Computer Games I* David N.L. Levy,2012-12-06 Computer Games I is the first volume in a two part compendium of papers covering the most important material available on the development of computer strategy games These selections range from discussions of mathematical analyses of games to more qualitative concerns of whether a computer game should follow human thought processes rather than a brute force approach to papers which will benefit readers trying to program their own games Contributions include selections from the major players in the development of computer games Claude Shannon whose work still forms the foundation of most contemporary chess programs Edward O Thorpe whose invention of the card counting method caused Las Vegas casinos to

change their blackjack rules and Hans Berliner whose work has been fundamental to the development of backgammon and chess games      **InfoWorld** ,1981-05-25 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects      **PC Mag** ,1986-05-27 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology      **Kilobaud, Microcomputing** ,1979      **PC Mag** ,1985-01-08 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology      *PC Mag* ,1986-05-13 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology      Computer Decisions ,1984
