Satellites And Commissars Strategy And Conflict In The Pol:

Satellites and Commissars Randall W. Stone, 2021-02-09 Why did the Soviet Union squander the political leverage afforded by its trade subsidy to Eastern Europe Why did Soviet officials fail to bargain with resolve to link subsidies to salient political issues to make credible commitments and to monitor the satellites policies Using an unprecedented array of formerly secret documents housed in archives in Moscow Warsaw and Prague as well as interviews with former Communist officials across Eastern Europe Randall Stone answers these questions and others that have long vexed Western political scientists Stone argues that trade politics revolved around the incentives created by distorted prices The East European satellites profited by trading on the margin between prices on the Western market and those in the Soviet bloc The Soviet Union made numerous attempts to reduce its implicit trade subsidy and increase the efficiency of the bloc but the satellites managed consistently to outmaneuver Soviet negotiators Stone demonstrates how the East Europeans artfully resisted Soviet objectives Stone draws upon recent developments in bargaining and principal agent theory arguing that the incentives created by domestic institutions weakened Soviet bargaining strategies In effect he suggests perverse incentive structures in the Soviet economy were exported into Soviet foreign policy Furthermore Stone argues incentives to smother information were so deeply entrenched that they frustrated numerous attempts to reform Soviet institutions

State Death Tanisha Fazal, 2011-10-30 If you were to examine an 1816 map of the world you would discover that half the countries represented there no longer exist Yet since 1945 the disappearance of individual states from the world stage has become rare State Death is the first book to systematically examine the reasons why some states die while others survive and the remarkable decline of state death since the end of World War II Grappling with what is a core issue of international relations Tanisha Fazal explores two hundred years of military invasion and occupation from eighteenth century Poland to present day Iraq to derive conclusions that challenge conventional wisdom about state death The fate of sovereign states she reveals is largely a matter of political geography and changing norms of conquest Fazal shows how buffer states those that lie between two rivals are the most vulnerable and likely to die except in rare cases that constrain the resources or incentives of neighboring states She argues that the United States has imposed such constraints with its global norm against conquest an international standard that has largely prevented the violent takeover of states since 1945 State Death serves as a timely reminder that should there be a shift in U S power or preferences that erodes the norm against conquest violent state death may once again become commonplace in international relations

A History Shared and Divided Frank Bösch, 2018-09-14 By and large the histories of East and West Germany have been studied in relative isolation And yet for all their differences the historical trajectories of both nations were interrelated in complex ways shaped by economic crises social and cultural changes protest movements and other phenomena so diffuse that they could hardly be contained by the Iron Curtain Accordingly A History Shared and Divided offers a collective portrait of the two Germanies that is both broad and deep It brings together

comprehensive thematic surveys by specialists in social history media education the environment and similar topics to assemble a monumental account of both nations from the crises of the 1970s to and beyond the reunification era **Energy Dependence and Supply Security** Anatole Boute, 2024-01-30 Facing the threat of weaponization of energy trade and investment this book assesses the implications on energy security of existing energy trade and investment laws It examines the legal aspects governing the creation and avoidance of dangerous dependencies in the energy sector using the 2022 energy crisis as a core example Margins for Manoeuvre in Cold War Europe Laurien Crump, Susanna Erlandsson, 2019-11-28 The Cold War is conventionally regarded as a superpower conflict that dominated the shape of international relations between World War II and the fall of the Berlin Wall Smaller powers had to adapt to a role as pawns in a strategic game of the superpowers its course beyond their control This edited volume offers a fresh interpretation of twentieth century smaller European powers East West neutral and non aligned and argues that their position vis vis the superpowers often provided them with an opportunity rather than merely representing a constraint Analysing the margins for manoeuvre of these smaller powers the volume covers a wide array of themes ranging from cultural to economic issues energy to diplomacy and Bulgaria to Belgium Given its holistic and nuanced intervention in studies of the Cold War this book will be instrumental for students of history international relations and political science Disruption Michael De Groot, 2024-03-15 In *Disruption* Michael De Groot argues that the global economic upheaval of the 1970s was decisive in ending the Cold War Both the West and the Soviet bloc struggled with the slowdown of economic growth chaos in the international monetary system inflation shocks in the commodities markets and the emergence of offshore financial markets The superpowers had previously disseminated resources to their allies to enhance their own national security but the disappearance of postwar conditions during the 1970s forced Washington and Moscow to choose between promoting their own economic interests and supporting their partners in Europe and Asia De Groot shows that new unexpected macroeconomic imbalances in global capitalism sustained the West during the following decade Rather than a creditor nation and net exporter as it had been during the postwar period the United States became a net importer of capital and goods during the 1980s that helped fund public spending stimulated economic activity and lubricated the private sector The United States could now live beyond its means and continue waging the Cold War and its allies benefited from access to the booming US market and the strengthened US military umbrella As *Disruption* demonstrates a new symbiotic economic architecture powered the West but the Eastern European regimes increasingly became a burden to the Soviet Union They were drowning in debt and the Kremlin no longer had the resources to rescue them **Political Science Abstracts** IFI/Plenum Data Company staff, 1987-11-30 *Political Science Abstracts* is an annual supplement to the *Political Science Government and Public Policy Series* of The Universal Reference System which was first published in 1967 All previous volumes are still available Arts & Humanities Citation Index ,1997 The New York Times Index ,1951 *Bulletin of the Atomic*

Scientists, 1966-06 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world *The Washington Post Index*, 1994 Space Warfare John J. Klein, 2006 This new study considers military space strategy within the context of the land and naval strategies of the past showing its limitations and pointing towards new strategic directions *Military Satellites* Abel Chirila, 2010-03-24 This book explores the United States reliance on space operations for its security Identifying vulnerabilities will allow us to apply our full range of capabilities to ensure space superiority and continued support to joint military operations across the spectrum of conflict Space superiority is as much about protecting our space assets as it is about preparing to counter an enemy's space or anti-space assets Space-based technologies and services permit people to communicate companies to do business civic groups to serve the public and scientists to conduct research Thus the United States is very reliant on satellites and will likely continue to be for many years to come Today small nations groups and individuals can acquire ground target data from commercial imagery sources navigation and weather data from government-owned satellites and state-of-the-art command and control capabilities through commercial communications satellites These functions are also discussed in this book **War in Space** Bowen Bleddyn E. Bowen, 2020-06-18 Applying strategic theory to outer space and drawing out the implications for international relations Offers a definitive and original vision of space warfare that theorises often overlooked aspects of contemporary space activities based in the discipline of Strategic Studies This original research draws out the implications of spacepower for wider debate in grand strategy and IR Applies the theory in a topical and contentious area within contemporary grand strategy anti-access and area denial warfare in the Taiwan Strait between China and America Key principles are summarised in seven propositions to make the key take-aways of theory applicable and memorable for researchers and practitioners This book presents a theory of spacepower and considers the implications of space technology on strategy and international relations The spectre of space warfare stalks the major powers as outer space increasingly defines geopolitical and military competition As satellites have become essential for modern warfare strategists are asking whether the next major war will begin or be decided in outer space Only strategic theory can explore the decisiveness and effects of war in space upon grand strategy and international relations The author applies the wisdom of military strategy to outer space and presents a compelling new vision of Earth orbit as a coastline rather than an open ocean or an extension of airspace as many have assumed Rooted in the classical military works of Clausewitz Mahan and Castex to name a few this book presents comprehensive principles for strategic thought about space that explain the pervasive and inescapable influence of spacepower on strategy and the changing military balance of the 21st century **Conflict in Space** Michael N. Golovine, 2003-01-01 **War in Space** Linda Dawson, 2018 With the recent influx of spaceflight and satellite launches the region of outer space has become saturated with vital technology used for communication and surveillance and the

functioning of business and government But what would happen if these capabilities were disrupted or even destroyed How would we react if faced with a full scale blackout of satellite communications What can and has happened following the destruction of a satellite In the short term the aftermath would send thousands of fragments orbiting Earth as space debris In the longer term the ramifications of such an event on Earth and in space would be alarming to say the least This book takes a look at such crippling scenarios and how countries around the world might respond in their wake It describes the aggressive actions that nations could take and the technologies that could be leveraged to gain power and control over assets as well as to initiate war in the theater of outer space The ways that a country s vital capabilities could be disarmed in such a setting are investigated In addition the book discusses our past and present political climate including which countries currently have these abilities and who the aggressive players already are Finally it addresses promising research and space technology that could be used to protect us from those interested in destroying the world s vital systems *Whither Space Power?*

Simon P. Worden, John E. Shaw, 2005-01-01 The influence of space power pervades almost every sphere and level of human existence from politics to military affairs to commercial activities to cultural mind sets Yet there is little to be found today in the way of coherent space power doctrine and strategy particularly in national security circles To what extent do our national interests rely on space How shall we defend our interests in space and how shall we deny our adversaries the benefits of space power in time of conflict How can we control and exploit the space environment How can we effectively wield space power against the full spectrum of threats from the lone terrorist to global peer competitors What should be our long range strategy and objectives if our goal is to achieve and maintain long term space superiority The purpose of this paper is two fold first to illuminate the historical and ever increasing importance of space in modern society and second to prescribe in view of this importance the foundations of a strategy for achieving lasting space superiority and ensuring national and world security
