Saving The Gray Whale People Politics And Conservation In Baja California:

Saving the Gray Whale Serge Dedina, 2000-01-01 Once hunted by whalers and now the darling of ecotourists the gray whale has become part of the culture history politics and geography of Mexico's most isolated region After the harvesting of gray whales was banned by international law in 1946 their populations rebounded but while they are no longer hunted for their oil these creatures are now chased up and down the lagoons of southern Baja California by whalewatchers This book uses the biology and politics associated with gray whales in Mexican waters to present an unusual case study in conservation and politics It provides an inside look at how gray whale conservation decisions are made in Mexico City and examines how those policies and programs are carried out in the calving grounds of San Ignacio Lagoon and Magdalena Bay where catering to ecotourists is now an integral part of the local economy More than a study of conservation politics Dedina's book puts a human face on wildlife conservation The author lived for two years with residents of Baja communities to understand their attitudes about wildlife conservation and Mexican politics and he accompanied many in daily activities to show the extent to which the local economy depends on whalewatching It is ironic observes Dedina that residents of some of the most isolated fishing villages in North America are helping to redefine our relationship with wild animals Americans and Europeans brought the gray whale population to the brink of extinction The inhabitants of San Ignacio Lagoon and Magdalena Bay are helping us to celebrate the whales survival By showing us how these animals have helped shape the lifeways of the people with whom they share the lagoons *Saving the Gray Whale* demonstrates that gray whales represent both a destructive past and a future with hope

Around the World in 80 Species Jill Atkins, Barry Atkins, 2018-11-08 The world is currently experiencing a sixth period of mass species extinction and extinction of flora and fauna is caused by a variety of factors arising from industrial activity and increasing human population such as global warming climate change habitat loss pollution and use of pesticides Most causes of extinction are linked to corporate activity either directly or indirectly ***Around the World in 80 Species*** Exploring the Business of Extinction responds to the ongoing

mass extinction crisis engulfing our planet by exploring the ways in which accounting business and finance can be used to prevent species extinctions From Africa to the Far East and from Europe to the Americas the authors explore species loss and how businesses can stop mass extinctions through greater transparency and through closer engagement with their investors and wildlife organisations The book concludes that global capitalism has led us to this extinction crisis and that therefore the mechanisms of capitalism namely accounting finance investment can help to pull us out Businesses must urgently address extinction before it is too late for all species including ourselves As the first book to explore corporate accounting and accountability in relation to species on the brink of extinction this book will be of great interest to both professionals and a wider audience interested in the causes and prevention of extinction Conservation in the Internet Age James N. Levitt, 2013-04-16 Since the earliest days of our nation new communications and transportation networks have enabled vast changes in how and where Americans live and work Transcontinental railroads and telegraphs helped to open the West mass media and interstate highways paved the way for suburban migration In our own day the internet and advanced logistics networks are enabling new changes on the landscape with both positive and negative impacts on our efforts to conserve land and biodiversity Emerging technologies have led to tremendous innovations in conservation science and resource management as well as education and advocacy efforts At the same time new networks have been powerful enablers of decentralization facilitating sprawling development into previously undesirable or inaccessible areas Conservation in the Internet Age offers an innovative cross disciplinary perspective on critical changes on the land and in the field of conservation The book provides a general overview of the impact of new technologies and networks explores the potentially disruptive impacts of the new networks on open space and biodiversity presents case studies of innovative ways that conservation organizations are using the new networks to pursue their missions considers how rapid change in the Internet Age offers the potential for landmark conservation initiatives Conservation in the Internet Age is the first book to examine the links among land use technology and conservation from multiple perspectives and to suggest areas and initiatives that merit further investigation It offers unique and valuable insight into the challenges facing the land and biodiversity conservation community in the early twenty first century and represents an important new work for policymakers conservation professionals and academics in planning design conservation and resource management policy and related fields **Transboundary Policy Challenges in the Pacific Border Regions of North America** Donald K. Alper, John Chadwick Day, James Loucky, 2008 Transboundary Policy Challenges responds to a growing interest in borderlands environmental policy by highlighting significant transboundary research and practices being undertaken within and across the Pacific border regions of North America Growing concern about the seriousness of environmental problems particularly in high growth border areas coupled with the rising awareness of the complexities entailed in wise development decisions has spurred recognition that new realities require new responses Critical for effective environmental protection restoration

Wild Sea Serge Dedina, 2022-03-08 Many people have lamented the pollution and outright loss of beaches along the coasts of California and Mexico but very few people have fought on behalf of beaches as hard or as successfully as Serge Dedina Whether taking on an international conglomerate or tackling a state transportation agency Dedina is truly an eco warrior In this sparkling collection of articles many written for popular magazines Dedina tells the stories as only an insider

could He writes with a firm grasp of facts along with an advocate s passion and outrage Sprinkled with just the right mix of humor and surf lingo Dedina s writing is weapons grade surfer speak for totally awesome Dedina grew up in Imperial Beach California just north of the Mexican border and he feels equally at home in Mexico and the States An expert on gray whales he eloquently describes the fight he helped to lead against the Mitsubishi Corporation whose plan to build a salt processing plant in the San Ignacio Lagoon in Baja California would have destroyed the world s last undeveloped gray whale lagoon With similar fervor Dedina describes helping to construct the unlikely coalition that succeeded in defeating a proposed toll road that would have decimated a legendary California surf spot In between he writes about the first surfers in Baja the Great Baja Land Rush of the 1990s Tijuana s punk music scene the pop culture wrestling phenomenon lucha libre the reasons why ocean pollution must be stopped and the way HBO took over his hometown Anyone interested in what s happening to our natural places or just yearning to read about someone really making a difference in the world will find this a book worth sinking their teeth into

The Gulf of California Richard C. Brusca,2010-04-15 Few places in the world can claim such a diversity of species as the Gulf of California Sea of Cortez with its 6 000 recorded animal species estimated to be half the number actually living in its waters So rich are the Gulf s water that over a half million tons of seafood are taken from them annually and this figure does not count the wasted by catch which would triple or quadruple that tonnage This timely book provides a benchmark for understanding the Gulf s extraordinary diversity how it is threatened and in what ways it is or should be protected In spite of its dazzling richness most of the Gulf s coastline now harbors but a pale shadow of the diversity that existed just a half century ago Recommendations based on sound careful science must guide Mexico in moving forward to protect the Gulf of California This edited volume contains contributions by twenty four Gulf of California experts from both sides of the U S Mexico border From the origins of the Gulf to its physical and chemical characteristics from urgently needed conservation alternatives for fisheries and the entire Gulf ecosystem to information about its invertebrates fishes cetaceans and sea turtles this thought provoking book provides new insights and clear paths to achieve sustainable use solidly based on robust science The interdisciplinary international cooperation involved in creating this much needed collection provides a model for achieving success in answering critically important questions about a precious but rapidly disappearing ecological treasure

Ryan Tucker Jones,Angela Wanhalla,2022-07-31 More than any other locale the Pacific Ocean has been the meeting place between humans and whales From Indigenous Pacific peoples who built lives and cosmologies around whales to Euro American whalers who descended upon the Pacific during the nineteenth century and to the new forms of human cetacean partnerships that have emerged from the late twentieth century the relationship between these two species has been central to the ocean s history Across Species and Cultures Whales Humans and Pacific Worlds offers for the first time a critical wide ranging geographical and temporal look at the varieties of whale histories in the Pacific The essay contributors hailing from around the Pacific present a wealth of fascinating stories while breaking new methodological ground in environmental history women s history animal studies and Indigenous ontologies In the process they reveal previously hidden aspects of the story of Pacific whaling including the contributions of Indigenous people to capitalist whaling the industry s exceptionally far reaching spread and its overlooked second life as a global industrial slaughter in the twentieth century While pointing to striking continuities in whaling histories around the Pacific Across Species and Cultures also reveals deep tensions between environmentalists and Indigenous peoples between ideas and realities and between the North and South Pacific The book delves in unprecedented ways into the lives and histories of whales themselves Despite the worst ravages of commercial and

industrial whaling whales survived two centuries of mass killing in the Pacific Their perseverance continues to nourish many human communities around and in the Pacific Ocean where they are hunted as commodities regarded as signs of wealth and power act as providers and protectors but are also ancestors providing a bridge between human and nonhuman worlds

Oil Beach Christina Dunbar-Hester, 2023-01-17 Can the stories of bananas whales sea birds and otters teach us to reconsider the seaport as a place of ecological violence tied to oil capital and trade San Pedro Bay which contains the contiguous Ports of Los Angeles and Long Beach is a significant site for petroleum shipping and refining as well as one of the largest container shipping ports in the world some forty percent of containerized imports to the United States pass through this so called America's Port It is also ecologically rich Built atop a land and waterscape of vital importance to wildlife the heavily industrialized Los Angeles Harbor contains estuarial wetlands the LA River mouth and a marine ecology where colder and warmer Pacific Ocean waters meet In this compelling interdisciplinary investigation award winning author Christina Dunbar Hester explores the complex relationships among commerce empire environment and the nonhuman life forms of San Pedro Bay over the last fifty years a period coinciding with the era of modern environmental regulation in the United States The LA port complex is not simply a local site Dunbar Hester argues but a node in a network that enables the continued expansion of capitalism propelling trade as it drives the extraction of natural resources labor violations pollution and other harms Focusing specifically on cetaceans bananas sea birds and otters whose lives are intertwined with the vitality of the port complex itself *Oil Beach* reveals how logistics infrastructure threatens ecologies as it circulates goods and capital and helps us to consider a future where the accumulation of life and the accumulation of capital are not in violent tension **The Journal of Environment & Development** ,2000
