Remaking the American Patient Nancy Tomes, 2016-01-06 In a work that spans the twentieth century Nancy Tomes questions the popular and largely unexamined idea that in order to get good health care people must learn to shop for it Remaking the American Patient explores the consequences of the consumer

economy and American medicine having come of age at exactly the same time Tracing the robust development of advertising marketing and public relations within the medical profession and the vast realm we now think of as health care Tomes considers what it means to be a good patient As she shows this history of the coevolution of medicine and consumer culture tells us much about our current predicament over health care in the United States Understanding where the shopping model came from why it was so long resisted in medicine and why it finally triumphed in the late twentieth century helps explain why despite striking changes that seem to empower patients so many Americans remain unhappy and confused about their status as patients today Own This! Health Humanities in Postgraduate Medical Education Allan D. Peterkin,Anna Skorzewska,2018-08-24 Most medical schools in the US Canada and UK now incorporate some form of arts and humanities based teaching into their curricula What happens in residency is another story Most postgraduate programs do not continue the thread of such teaching although many residents would like to deepen their understanding of the medical humanities before they move into practice The humanities emphasize the human side of medicine and can provide a counterpoint to the reductionism of evidence based medicine and technological hubris for young doctors as they apply new knowledge and skills in ambiguous real life encounters with patients who are living with complicated health problems Humanities based education can help both sides of the relationship programs are shown to reduce burnout and mental health issues in young physicians and can also help learning practitioners grapple with the most difficult aspects of their craft how does one persuade patients on a course of treatment while respecting informed consent How does one work with families How does one listen to and treat patients exhibiting self harm tendencies Available research may demonstrate the efficacy of such exposures but provide little practical advice or resources for setting up programs across specialty and sub specialty disciplines Health Humanities in Post Graduate Medical Education will fill this gap in knowledge translation for the thousands of residency programs worldwide allowing educators supervisors and residents themselves to create robust and educationally sound workshops seminars study groups lecture series research and arts based projects publications and events
