

Result: For polynomial function of degree n , successive numbers are increasing by $\frac{n!}{(n-1)!}$ and first maximum number of turning points (polynomial that is decreasing) is $\frac{n!}{(n-1)!}$.

But later we have graphical representation of polynomial functions. Every second maximum connected properties of polynomial functions.

Each table of values shows, represents polynomial function, use first differences for determining character of the function and second first turning maximum and character of the turning maximum. **1st, infinite differences when n is** (see 1st or 2nd table next 1.4.2020)

Molecular Simulation Methods for Predicting Polymer Properties Vassilios Galiatsatos, 2005-02-03 Among the thousands of synthesized polymers new polymeric substances and materials with new often unusual properties often arise Consequently this presents a problem in determining the physical properties of polymers and thus makes it difficult to ascertain how to synthesize polymers with desired properties This book discusses what molecular modelling can do to predict the properties of realistic polymer systems Organized by property each chapter will address the methods one may use to study the particular system Focuses on polymer properties rather than methods making it more accessible to the average scientist engineer All important polymers will be covered such as amorphous polymers semicrystalline polymers elastomers emulsions polymer interfaces and surfaces Chapters contributed by experts in the field Discusses current commercial software used in molecular simulation **Linear and Nonlinear Model Order Reduction for Numerical Simulation of Electric Circuits** Kasra Mohaghegh, 2010 Increasing complexity combined with decreasing geometrical sizes in electric circuit design lead to high dimensional dynamical models to be considered by EDA tools Model order reduction MOR has become a popular strategy to decrease the problem's size while preserving its crucial properties MOR shall achieve accurate statements on a circuit's behavior within an affordable amount of computational time Just recently MOR techniques are

designed to consider the differential algebraic nature of the underlying models We present an approach based on an embedding i.e a strategy applied in the construction of numerical integration schemes for differential algebraic equations DAEs The system of DAEs is transformed into an artificial system of ordinary differential equations ODEs since MOR schemes for ODEs can be applied now We construct analyze and test different strategies with respect to the usage of the parameter ϵ that transforms the DAEs into ODEs Moreover accurate mathematical models for MOS devices introduce highly nonlinear equations As the packing density of devices is growing in circuit design huge nonlinear systems appear in practice It follows an increasing demand for reduced order modeling of nonlinear problems In the thesis we also review the status of existing techniques for nonlinear MOR by investigating the performance of the schemes applied in circuit simulation

Low dimensionality is a multifarious concept which applies to very diversified materials Thus examples of low dimensional systems are structures with one or several layers single lines or patterns of lines and small clusters isolated or dispersed in solid systems Such low dimensional features can be produced in a wide variety of materials systems with a broad spectrum of scientific and practical interests These features in turn induce specific properties and particularly specific transport properties In the case of zeolites low dimensionality appears in the network of small diameter pores of molecular size extending in one two or three dimensions that these solids exhibit as a characteristic feature and which explains the term of molecular sieves currently used to name these materials Indeed a large number of industrial processes for separation of gases and liquids and for catalysis are based upon the use of this low dimensional feature in zeolites For instance zeolites constitute the first class of catalysts employed all over the world Because of the peculiarity and flexibility of their structure and composition zeolites can be adapted to suit many specific and diversified applications For this reason zeolites are presently the object of a large and fast growing interest among chemists and chemical engineers

Modelling Emergency Situations in the Drilling

of Deep Boreholes Sergii Glazunov, Olga Glushakova, Valery Gulyayev, 2019-10-31 The era of easily acquiring oil and gas is over Now to extract these resources deep vertical and curvilinear off shore and ground based boreholes are drilled in inclement climate conditions and in complex heterogeneous tectonic rocks Additional novelties have also been assimilated into these technologies by the shale revolution The techniques and methods of borehole drilage are developing so fast that scientific understanding and substantiation have no time to refine them Therefore as a rule different unpredictable emergency effects and overall failures accompany these procedures The gravest of these are buckling of the drill strings their resonant vibrations their sticking during dragging and twisting the self triggering of torsional relaxation vibration and the self excitation of forward backward and superfast bit whirlings To analyse these phenomena this volume elaborates new mathematic models and numerical methods On the basis of these a special software was created which allowed new results concerning the peculiarities of the affected phenomena to be achieved The book will be of interest to borehole designers and specialists in mechanics and applied mathematics

Convex and Concave Hypersoft Sets with Some Properties Atiqe Ur Rahman, Muhammad Saeed, Florentin Smarandache, 2020-08-01 Convexity plays an imperative role in optimization pattern classiffication and recognition image processing and many other relating topics in different fields of mathematical sciences like operation research numerical analysis etc The concept of soft sets was first formulated by Molodtsov as a completely new mathematical tool for solving problems dealing with uncertainties Smarandache

conceptualized hypersoft set as a generalization of soft set hS as it transforms the function hS into a multi attribute function hHS Deli introduced the concept of convexity cum concavity on soft sets to cover above topics under uncertain scenario In this study a theoretic and analytical approach is employed to develop a conceptual framework of convexity cum concavity on hypersoft set which is generalized and more effective concept to deal with optimization relating problems Moreover some generalized properties like inclusion intersection and union are established Essays on education and kindred subjects Repr Herbert Spencer,1914
