The Future of Nursing Institute of
Medicine, Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of
Medicine, 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change
significantly to meet the increased demand for care that will be created by health care reform and to advance improvements
in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest
segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession.
Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in
improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be
fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure
its members are well prepared, the profession should institute residency training for nurses, increase the percentage of nurses
who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory
and institutional obstacles, including limits on nurses' scope of practice, should be removed so that the health system can reap
the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes
recommendations for an action-oriented blueprint for the future of nursing.

Nursing: Health Education and Improving Patient Self-Management
Barbara Sassen, 2017-10-10 This book describes the latest advances in health education and patients' self-management,
addressing core questions such as: How can you motivate a patient to adopt a healthier lifestyle, and how can you support
their self-management? Though there is a broad consensus within the nursing profession on the importance of health
promotion and the promotion of self-management, nursing professionals often struggle with the underlying theoretical and
practical aspects involved, as well as the right type of intervention to use and how to evaluate the results. The book departs
from international trends which primarily underline the importance of prevention and focus on such issues as the increase in
the number of people with chronic health problems and comorbidity, the empowerment of patients, and the technological
developments in the health care system. In the first chapters, it examines health at the micro, meso, and macro level, combined
with epidemiological health indicators. The following chapters focus on prevention, health promotion, and self-management,
while also broadly discussing prevention. The book then turns to the development and purpose of, as well as plans for, health
promotion and health education. The Intervention Mapping protocol is the starting point, addressing questions such as how to
motivate a patient to other healthier behavior. Subsequently, the field of health promotion is extended to disease prevention.
