In an ischemic brain attack, there is disruption of the central bloodflow due to obstruction of a bloodvessel. This can cause a wide variety of neurologic deficits depending on the location of the lesion with which vessels are obstructed. A stroke is an upper motor neuron lesion and results in loss of voluntary control over motor movements. Because the upper motor neurons decussate (cross), a disturbance of voluntary motor control on one side of the body may reflect damage to the upper motor neurons on the opposite side of the brain. The most common motor dysfunction is hemiplegia (paralysis on one side of the body).
