1. INTRODUCTION

Alternating-time temporal logic (ATL) [1] is a temporal logic that incorporates some basic game theoretical notions. In this paper, we extend ATL with a notion of *plausibility*, which can be used to model and reason about rational behavior of agents. In our approach, some strategies (or rather *strategy profiles*) can be assumed plausible, and one can reason about what can be *plausibly* achieved by agents under such an assumption.

This idea has been inspired by the way in which games are analyzed in game theory. First, game theory identifies a number of *solution concepts* (e.g., Nash equilibrium, undominated strategies, Pareto optimality) that can be used to define rationality of players. Then, we usually *assume* that *players play rationally* in the sense of one of the concepts, and we *ask about the outcome of the game under this assumption*. Note that solution concepts do not only help to determine the right decision for “our” agent. Perhaps even more importantly, they constrain the possible (predicted) responses of the opponents. For many games the number of all possible outcomes is infinite, although only some of them “make sense”. Still, we need a notion of rationality (like subgame-perfect Nash equilibrium) to

discard the “less sensible” ones, and determine what should happen had the game been played by ideal players.

There are two possible points of focus in this context. Research within game theory understandably favors work on *characterization* of various types of rationality (and defining most appropriate solution concepts). Applications of game theory, also understandably, tend toward using the solution concepts to predict the outcome in a given game (i.e., to “solve” the game). The first issue has been studied in the framework of logic, for example in [2, 4, 10, 11]; more recently, game-theoretical solution concepts have been characterized in dynamic logic [7], dynamic epistemic logic [3], and ATL [13, 8]. The second issue seems to have been neglected in logic-based research: papers by Van Otterloo and his colleagues [14, 16, 15] are the only exceptions we know of (and each of them commits to a particular view of rationality). Here, we try to fill in this gap, and propose a general, modal logic-based framework for reasoning about behavior and abilities of rational agents.

2. ATL

The language of Alternating-time Temporal Logic [1] is defined over a set Agt of agents and a set Π of propositions, and consists of the following formulae:

$$\varphi ::= p \mid \neg\varphi \mid \varphi \wedge \psi \mid \langle A \rangle\gamma, \quad \gamma ::= \bigcirc\varphi \mid \Box\varphi \mid \varphi U \psi,$$

where $p \in \Pi$ and $A \subseteq \text{Agt}$. Informally, $\langle A \rangle\varphi$ says that agents A have a collective strategy to enforce φ . ATL formulae include the usual temporal operators: \bigcirc (“in the next state”), \Box (“always from now on”) and U (strict “until”). Additionally, \bigcirc (“now or sometime in the future”) can be defined as $\bigcirc\varphi \equiv \top U \varphi$.

The semantics of ATL is defined in *concurrent game structures*:

$$M = (\text{Agt}, Q, \Pi, \pi, \text{Act}, d, \alpha),$$

consisting of: a set $\text{Agt} = \{1, \dots, k\}$ of agents; set Q of states; set Π of atomic propositions; valuation of propositions $\pi : Q \rightarrow P(\Pi)$; set Act of actions. Function $d : \text{Agt} \times Q \rightarrow P(\text{Act})$ indicates the actions available to agent $a \in \text{Agt}$ in state $q \in Q$. A move vector in state q is a tuple $\langle m_1, \dots, m_k \rangle \in d(q)$ where $d(q) = \prod_{1 \leq i \leq k} d_i(q)$ is the set of all move vectors in q . Finally, α is a transition function which maps a state $q \in Q$ and a move vector $\langle m_1, \dots, m_k \rangle \in d(q)$ to another state $q' = \alpha(q, \langle m_1, \dots, m_k \rangle)$.

A *computation* or *path* $\lambda = q_0, q_1, \dots$ is an infinite sequence of states such that there is a transition between each q_i, q_{i+1} . We define $\lambda[i] = q_i$ to denote the i -th state of λ . λ_{Agt} denotes all paths of M . The set of all paths, starting in q , is given by $\lambda_{\text{Agt}}(q)$.

A (memoryless) strategy of agent a is a function $s_a : Q \rightarrow \text{Act}$ such that $s_a(q) \in d_a(q)$. The set of strategies for agent a is denoted by Σ_a . A collective strategy s_A for team $A \subseteq \text{Agt}$ specifies an individual strategy for each agent $a \in A$. Now, $\Sigma_A =$

Argumentation in Multi-Agent Systems Iyad Rahwan, Pavlos Moraitis, 2009-02-16 During the last decade Argumentation has been gaining importance within Artificial Intelligence especially in multi agent systems Argumentation is a powerful mechanism for modelling the internal reasoning of an agent It also provides tools for analysing designing and implementing sophisticated forms of interaction among rational agents thus making important contributions to the theory and practice of multiagent dialogues Application domains include nonmonotonic reasoning legal disputes business negotiation labor disputes team formation scientific inquiry deliberative democracy ontology reconciliation risk analysis scheduling and logistics This volume presents the latest developments in this area at the interface of argumentation theory and multi agent systems The 10 revised full papers presented together with 3 invited papers from the AAMAS 2008 conference were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on argument based reasoning argumentation and dialogue as well as strategic and pragmatic issues **Innovative Concepts for Agent-Based Systems** Walt Truszkowski, Chris Rouff, Mike Hinchey, 2003-10-21 This collection represents the proceedings of the 1st GSFC JPL Workshop on Radical Agent Concepts WRAC which was held on 16 18 January 2002 at the Science Applications International Corporation SAIC Conference Center in McLean VA USA Over the past few years agent

technology has emerged as a powerful force in computing. Agent technology may well form the foundation for the next generation of computing systems. New and innovative agent concepts and techniques may bring further developments to this exploding area of research. Such work is often strongly inspired by theoretical or empirical studies of human behavior, social intelligence, psychology, arts, biology, computer science, and philosophy. This workshop aimed at bringing together an interdisciplinary event or in all thinkers, practitioners, and academics with an interest in radical, very novel concepts for agent-based systems. The workshop provided a forum to present the latest research findings in many aspects of agent technology. The organizers welcomed participation by those working in agent architectures, agent communities, agent communications, agent modeling, agent applications, and other agent-related areas. We were particularly seeking papers on novel and innovative ideas pushing the envelope of current agent technology. Contributions without a prototype or working system, i.e., purely conceptual contributions, were welcomed, and out-of-the-box thinkers were especially encouraged to participate. The workshop was structured so as to allow the participants adequate time for discussion and interaction to exchange ideas and reflect on the motivations, scientific grounds, and practical consequences of the concepts presented.

On Reasoning and Argument David Hitchcock, 2017-04-06. This book brings together in one place David Hitchcock's most significant published articles on reasoning and argument. In seven new chapters, he updates his thinking in the light of subsequent scholarship. Collectively, the papers articulate a distinctive position in the philosophy of argumentation. Among other things, the author develops an account of material consequence that permits evaluation of inferences without problematic postulation of unstated premises; updates his recursive definition of argument that accommodates chaining and embedding of arguments; and allows any type of illocutionary act to be a conclusion. Advances a general theory of relevance; provides comprehensive frameworks for evaluating inferences in reasoning by analogy, means-end reasoning, and appeals to considerations or criteria; argues that none of the forms of arguing *ad hominem* is a fallacy; describes proven methods of teaching critical thinking effectively.

Logic and Philosophy of Science in Uppsala D. Prawitz, Dag Westerståhl, 2013-06-29. The International Congresses of Logic, Methodology, and Philosophy of Science, which are held every fourth year, give a cross-section of ongoing research in logic and philosophy of science. Both the invited lectures and the many contributed papers are conducive to this end. At the 9th Congress held in Uppsala in 1991, there were 54 invited lectures and around 650 contributed papers divided into 15 different sections. Some of the speakers who presented contributed papers that attracted special interest were invited to submit their papers for publication, and the result is the present volume. A few papers appear here more or less as they

were presented at the Congress whereas others are expansions or elaborations of the talks given at the Congress A selection of this kind containing 38 papers drawn from the 650 contributed papers presented at the Uppsala Congress cannot do justice to all facets of the field as it appeared at the Congress But it should allow the reader to get a representative survey of contemporary research in large areas of philosophical logic and philosophy of science About half of the papers of the volume appear in sections listed at the Congress under the heading Philosophical and Foundational Problems about the Sciences The section Foundations of Logic Mathematics and Computer Science is represented by three papers Foundations of Physical Sciences by six papers Foundations of Biological Sciences by three papers Foundations of Cognitive Science and AI by one paper and Foundations of Linguistics by three papers

Moral Knowledge Ellen Frankel Paul, Fred Dycus Miller, Jeffrey Paul, 2001 Philosophers since ancient times have pondered how we can know whether moral claims are true or false The first half of the twentieth century witnessed widespread skepticism concerning the possibility of moral knowledge Indeed some argued that moral statements lacked cognitive content altogether because they were not susceptible to empirical verification The British philosopher A J Ayer contends that They are pure expressions of feeling and as such do not come under the category of truth and falsehood They are unverifiable because they do not express genuine propositions The second half of the twentieth century brought a revival of interest among philosophers in moral and political questions Whether or not ethics can be founded upon a rational basis continues to preoccupy the philosophical community even now

Francesco Ademollo,Fabrizio Amerini,Vincenzo De Risi,2022-07-04 This volume collects 22 essays on the history of logic written by outstanding specialists in the field The book was originally prompted by the 2018 2019 celebrations in honor of Massimo Mugnai a world renowned historian of logic whose contributions on Medieval and Modern logic and to the understanding of the logical writings of Leibniz in particular have shaped the field in the last four decades Given the large number of recent contributions in the history of logic that have some connections or debts with Mugnai s work the editors have attempted to produce a volume showing the vastness of the development of logic throughout the centuries We hope that such a volume may help both the specialist and the student to realize the complexity of the history of logic the large array of problems that were touched by the discipline and the manifold relations that logic entertained with other subjects in the course of the centuries The contributions of the volume in fact span from Antiquity to the Modern Age from semantics to linguistics and proof theory from the discussion of technical problems to deep metaphysical questions and in it the history of logic is kept in dialogue with the history of mathematics economics and the moral sciences at large

Minimal Morality

Michael Moehler,2018-03-09 Michael Moehler develops a novel multilevel social contract theory In contrast to existing theories in the liberal tradition it does not merely assume a restricted form of reasonable moral pluralism but is tailored to the conditions of deeply morally pluralistic societies which may be populated by liberal moral agents nonliberal moral agents and according to the traditional understanding of morality nonmoral agents alike Moehler draws on the history of the social contract tradition especially the work of Hobbes Hume Kant Rawls and Gauthier as well as on the work of some of the critics of this tradition such as Sen and Gaus Moehler s two level contractarian theory holds that morality in its best contractarian version for the conditions of deeply morally pluralistic societies entails Humean Hobbesian and Kantian moral features The theory defines the minimal behavioral restrictions that are necessary to ensure compared to violent conflict resolution mutually beneficial peaceful long term cooperation in deeply morally pluralistic societies The theory minimizes the problem of compliance in morally diverse societies by maximally respecting the interests of all members of society Despite its ideal nature the theory is in principle applicable to the real world and for the conditions described most promising for securing mutually beneficial peaceful long term cooperation in a world in which a fully just society due to moral diversity is unattainable If Rawls intention was to carry the traditional social contract argument to a higher level of abstraction then the two level contractarian theory brings it back down to earth
