Recent And Emerging Theoretical Frameworks For Research On Classroom Learning Contributions And Limitations:

Recent and Emerging Theoretical Frameworks for Research on Classroom Learning H. Marshall, Hermine H. Marshall, 1997-01-01 Over the past decade a number of new conceptualizations of learning have entered the literature These include various forms of constructivism such as cognitive constructivism and social constructivism as well as sociocultural approaches to learning Unfortunately differences among these approaches in addition to differences between these approaches and more familiar cognitive psychological and information processing frameworks have sometimes been blurred or misconstrued as those attempting to understand the new have incorporated aspects of these approaches into their previously held conceptualizations without adequately distinguishing subtle but critical differences The purposes of this special issue are to shed greater light on differences among new and familiar approaches to understanding classroom learning and to highlight the contributions to and limitations of these approaches for understanding classroom learning To achieve these purposes contributors were asked to present key features as well as strengths and limitations of various frameworks for understanding classroom learning These articles represent the current though often fluid thinking in the ongoing process of evolving knowledge about classroom learning

Lattery,2016-10-01 Deep Learning in Introductory Physics Exploratory Studies of Model Based Reasoning is concerned with the broad question of how students learn physics in a model centered classroom The diverse creative and sometimes unexpected ways students construct models and deal with intellectual conflict provide valuable insights into student learning and cast a new vision for physics teaching This book is the first publication in several years to thoroughly address the coherence versus fragmentation debate in science education and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching and addresses current international concern over the state of

science education and appropriate standards for science teaching and learning The book is divided into three parts Part I introduces the framework agenda and educational context of the book An initial study of student modeling raises a number of questions about the nature and goals of physics education Part II presents the results of four exploratory case studies These studies reproduce the results of Part I with a more diverse sample of students under new conditions a public debate peer discussions and group interviews and with new research prompts model building software bridging tasks and elicitation strategies Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research

ENDORSEMENTS

In *Deep Learning in Introductory Physics* Lattery describes his extremely innovative course in which students ideas about motion are elicited evaluated with peers and revised through experiment and discussion The reader can see the students deep engagement in constructive scientific modeling while students deal with counter intuitive ideas about motion that challenged Galileo in many of the same ways Lattery captures students engaging in scientific thinking skills and building difficult conceptual understandings at the same time This is the double outcome that many science educators have been searching for The case studies provide inspiring examples of innovative course design student sensemaking and reasoning and deep conceptual change
