Recent Developments In Alcoholism Vol 17 Alcohol Problems In Adolescents And Young Adults:

Alcohol Research & Health ,2004 **Treating and Preventing Adolescent Mental Health Disorders** Dwight L. Evans,Edna B. Foa,Raquel E. Gur,Herbert Hendin,Charles P. O'Brien,Daniel Romer,Martin E.P. Seligman,B. Timothy Walsh,2017-07-12 Sponsored by the Adolescent Mental Health Initiative of the Annenberg Public Policy Center APPC of the University of Pennsylvania and the Annenberg Foundation Trust at Sunnylands Trust **Treating and Preventing Adolescent Mental Health Disorders** Second Edition provides a major update since the first edition in 2005 It addresses the current state of knowledge about the major mental health disorders that emerge during adolescence including updated DSM 5 diagnostic criteria Here six commissions established by the APPC and the Sunnylands Trust pool their expertise on adolescent anxiety schizophrenia substance use disorders depression and bipolar disorders eating disorders and suicidal behavior in sections that thoroughly define each disorder outline and assess available treatments discuss prevention strategies and suggest a research agenda based on what we know and don't yet know about these various conditions Two additional behavioral disorders gambling and internet addiction are covered in this second edition As a meaningful counterpoint to its primary focus on mental illness the volume also incorporates the latest research from a seventh commission on positive youth development which addresses how we can fully prepare young people to be happy and successful throughout their lives Concluding chapters discuss overarching issues regarding the behavioral and mental health of adolescents overcoming the stigma of mental illness the research policy and practice context for the delivery of evidence based treatments and the development of a more robust agenda to advance adolescent health Integrating the work of eminent scholars in both psychology and psychiatry this work will be an essential volume for academics and practicing clinicians and will serve as a wake up call to mental health professionals and policy makers alike about the state of our nation's response to the needs of adolescents with mental disorders Sequencing and Prediction of Adolescent Soft Drug Initiation: Systematic Review, Quantitative Investigation, and Dual Cross-Validation Rebecca J. Howell,2010-06-03 In providing a comprehensive investigation of alcohol cigarette and marijuana initiation among adolescents the overarching goals of the research were to build upon extant findings address important gaps found in the literature and contribute to the prevention science knowledge base A four fold purpose founded the study 1 provide a systematic review of the soft drug initiation literature 2 test a modified version of Kandel's 2002 drug sequencing hypothesis 3 determine if predictors of soft drug initiation differ in kind or saliency by biological age and drug type and 4 examine age and drug specific determinants of the timing at which soft drug initiation occurs Supplemental attention also was directed at evaluating the utility of Petraitis et al's 1995 distal proximal mediation hypothesis Through the quantitative component of the research nine hypotheses were tested Cross sectional data were derived from a rural sample of 6th 9th and 12th grade students who completed the 2004 Primary Prevention Awareness Attitude and Use Survey PPAAUS All of the hypotheses obtained some degree of support more support

was yielded for the specific risk factor hypothesis than the common factor model and convincing evidence was obtained for Kandel's drug sequencing hypothesis and Petraitis et al.'s distal proximal mediation hypothesis. The findings also supported the bulk of the directional hypotheses and several of the direct and indirect effects propositions put forth in social learning theory, the social development model, and the theory of planned behavior. In contrast, the results called into question some of the direct effects articulated in Hirschi's original statement of social control and underscored some possible limits of the social development model. In an effort to gauge the validity of the findings, a dual cross validation scheme was employed. The systematic review cross validation involved comparing the quantitative findings for two major hypotheses to those yielded from 36 primary studies examined in the systematic review. Through a further quantitative cross validation, the findings for the major and supplemental hypotheses were compared to those derived from a sample of 6th, 9th, and 12th grade students who completed the 2001 PPAAUS. On balance, a relatively strong degree of convergence was obtained. This confluence served to bolster the reliability and validity of the results. Policy and programmatic implications also were indicated.

The Oxford Handbook of Adolescent Substance Abuse Robert A. Zucker, Sandra A. Brown, 2019-08-01 Adolescent substance abuse is the nation's 1 public health problem. It originates out of a developmental era where experimentation with the world is increasingly taking place and where major changes in physical self and social relationships are taking place. These changes cannot be understood by any one discipline nor can they be described by focusing only on the behavioral and social problems of this age period, the characteristics of normal development, or the pharmacology and addictive potential of specific drugs. They require knowledge of the brain's systems of reward and control, genetics, psychopharmacology, personality, child development, psychopathology, family dynamics, peer group relationships, culture, social policy, and more. Drawing on the expertise of the leading researchers in this field, this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse. The Handbook is organized into eight sections covering the literature on the developmental context of this life period, the epidemiology of adolescent use and abuse, similarities and differences in use, addictive potential, and consequences of use for different drugs, etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social. Two sections cover the clinical ramifications of abuse and prevention and intervention strategies to most effectively deal with these problems. The Handbook's last section addresses the role of social policy in framing the problem in addressing it and explores its potential role in alleviating it.
