Recent Advances and Perspectives in Deoxynivalenol Research Marc Maresca, 2018-07-09 Mycotoxins are secondary metabolites produced by molds. Although the primary role of these toxins is thought to be related to the colonisation of the environment by the fungi, mycotoxins are able to kill other microorganisms, antimicrobial effect and/or plant cells. Mycotoxin-producing fungi being necrophagic, the exposure of animals and humans to mycotoxins through the consumption of mycotoxin-contaminated food and feeds leads to diseases and death. Among the different mycotoxins described, more than 350 mycotoxins have been identified. Deoxynivalenol (DON) or vomitoxin, produced by *Fusarium* species, has attracted the most attention due to its prevalence and toxicity. DON is part of a family of mycotoxins called trichothecenes, which are small sesquiterpenoids with an epoxide group at positions 12-13, allowing their binding to ribosomes, causing the so-called ribosome stress response, characterized by the activation of various protein kinases that lead to alterations in gene expression and cellular toxicity in animals, humans, and plants. Here, we compiled very recent findings regarding DON and its derivatives: i) their prevalence in human food; ii) the estimation of the exposure of humans to them using biological markers; iii) their roles during plant-fungi interaction; iv) the alteration caused by them in animals and humans, particularly at low doses that are close to those observed in farm animals and human consumers; v) possible strategies to decrease their presence in food and feeds. Overall, this book will give the reader a clear and global view on this important mycotoxin produced by *Fusarium* species, which is responsible for huge economic loss and health issues. Diseases of Field Crops: Diagnostics and Management Vaibhav Kumar Singh, Jameel Akhtar, Krishna Pratap Singh, 2024-11-18 This edited book is a compilation of the chapters on the recent advances made in the field of disease management in various field crops. It covers host resistance, regulatory mechanism, as well as non-chemical methods and computer-based applications in disease management. Molecular marker-assisted selection, proteomic approaches, CRISPR-Cas-mediated technology to improve food quality and minimize negative public health impact associated with crop diseases is also discussed. Plant diseases continue to be a major challenge to global crop production, especially field crops, inflicting not only crop yield losses to farmers but also declining quality as well as nutritional value, leading to a threat to global food security. According to FAO statistics, there is a need for a 70% steady increase in agricultural production to fulfil the food requirements of 9.1 billion populations by 2050, and annual global crop losses due to pests and diseases have been estimated to be about 30%. Therefore, the book aims at bringing out comprehensive information on field crop diseases, plant disease detection and diagnosis, monitoring, forecasting, forewarning, and management. The book is very useful for students, teachers, researchers, planners, administrators, and also the end users at national and international level.

Postharvest Diseases of Fruits and Vegetables R. Barkai-Golan, 2001-06-07 Focusing on the great variety of research being done in the field of postharvest pathology, this volume presents a collection of topics concerning the diseases of harvested fruits and

vegetables Each chapter represents a separate unit which taken together create a better understanding of the whole subject Topics include the causal agents of postharvest diseases of fruits and vegetables their sources and their ways of penetration into the host factors that may accelerate the development of the pathogen in the host and those that suppress them a list of the main pathogens of fruits and vegetables their hosts and the diseases elicited by them and a detailed description of the major diseases of selected groups of fruits and solanaceous vegetable fruits Attack mechanisms of pathogens and defense mechanisms of the host are examined as are treatments aimed at suppressing postharvest diseases The search for natural and safe chemical compounds and the variety of alternative physical and biological methods for use in postharvest disease control are emphasized Teachers and students who focus on postharvest pathology scientists in research institutes companies dealing with fruit and vegetable preservation technologies and for all those striving to improve the quality of harvested fruits and vegetables will find this book of great interest
