Services In The International Economy:

Services in the International Economy Robert Mitchell Stern, 2001 Examines the growing role of services in the world economy Managing the Service Economy: Prospects and Problems Fishman-Davidson Center for the Study of the Service Sector, 1985 These essays discuss the service sector and causes problems and prospects of replacing the manufacturing business The International Economy , 1980 **Constructing the International Economy** Rawi Abdelal, Mark Blyth, Craig Parsons, 2015-10-27 Focusing empirically on how political and economic forces are always mediated and interpreted by agents both in individual countries and in the international sphere Constructing the International Economy sets out what such constructions and what various forms of constructivism mean both as ways of understanding the world and as sets of varying methods for achieving that understanding It rejects the assumption that material interests either linearly or simply determine economic outcomes and demands that analysts consider as a plausible hypothesis that economies might vary substantially for nonmaterial reasons that affect both institutions and agents interests Constructing the International Economy portrays the diversity of models and approaches that exist among constructivists writing on the international political economy The authors outline and relate several different arguments for why scholars might attend to social construction inviting the widest possible array of scholars to engage with such approaches They examine points of terminological or theoretical confusion that create unnecessary barriers to engagement between constructivists and nonconstructivist work and among different types of constructivism This book provides a tool kit that both constructivists and their critics can use to debate how much and when social construction matters in this deeply important realm Contributors Rawi Abdelal Harvard Business School Jacqueline Best University of Ottawa Mark Blyth Brown University Mlada Bukovansky Smith College Jeffrey M Chwieroth London School of Economics Francesco Duina Bates College Charlotte Epstein University of Sydney Yoshiko M Herrera University of Wisconsin Madison Paul Langley Northumbria University Craig Parsons University of Oregon Catherine Weaver University of Texas at Austin Wesley W Widmaier Saint Joseph s University Cornelia Woll CERI Sciences Po Paris **Spaces of International Economy and Management** R. The Political Economy of the Service Transition Anne Wren,2013-01-24 Over the past four decades the wealthiest OECD economies in Europe North America and Australasia have faced massive structural change Industrial sectors which were once considered the economic backbone of these societies have shrunk inexorably in terms of size and economic significance while service sectors have taken over as the primary engines of output and employment expansion The impact on labor markets has been profound in many OECD countries more than three quarters of employment is now in services while industrial sectors on average account for less than one fifth This sectoral shift in the locus of economic activity has potentially radical implications for politics and society However these implications are only beginning to be understood This path breaking book is a systematic attempt to understand the distinct political economy of service societies It examines how different types of socio economic regimes manage the service transition with a central focus on job creation and destruction and the changing characteristics of labor markets and shows that the economic distributional and political outcomes with

which it is associated vary across countries depending on their political institutional structures

Struggling With Success: Challenges Facing The International Economy Anne O Krueger, 2012-01-13 Globalization by which is meant the increasing economic interdependence among nations has been a critical ingredient in enabling enormous improvement in mankind's condition. While progress has not always been smooth and has not come without dislocation for some, the economic policy challenge has been and is to enable the realization of the large potential benefits of globalization while simultaneously reducing the negative side effects and providing safety nets for those whose lives are disrupted in the process. This volume focuses on the successes of globalization and some of the main economic policy challenges and solutions that arise to enhance the benefits and lower the costs. It covers different aspects of globalization: sovereign debt restructuring, development of the financial sector and financial crises in Asia, Turkey, Brazil, etc. The final part of the book covers multilateral international organizations, namely the World Trade Organization, the IMF, and the World Bank.

AFTA in the Changing International Economy Joseph L.H. Tan, 1996 This timely volume reviews the rapidly changing international economic environment and raises a range of issues and concerns pertaining to recent developments and the future of AFTA (ASEAN Free Trade Area). Part one is devoted to thematic analyses and perspectives dealing with trade enlarging the ASEAN regional grouping and relations with the World Trade Organization (WTO). Part two analyses AFTA in a wider comparative perspective, examining relationships with the major trading partners of ASEAN, namely the United States and more broadly NAFTA, Japan, and the European Union.

Asset Pricing in the International Economy Mr. José M. Barrionuevo, 1993-02-01 This paper presents a statistical and economic interpretation of the low and often economically implausible risk aversion estimates obtained for fixed income assets throughout the finance literature. For a statistical interpretation, Monte Carlo simulations are used to demonstrate that specification errors introduce a serious downward bias in parameter estimates derived from the standard asset pricing model. For an economic interpretation, an international version of the asset pricing model is presented. The model suggests that by reducing the effect of country specific disturbances, an international measure of consumption growth yields more accurate risk aversion estimates than a national measure. The results of asset pricing tests suggest that risk aversion estimates derived from models constructed for the international measures are economically plausible and close to each other across eight industrialized economies. These results are robust for several asset returns.
