LOGIC, SETS AND THE TECHNIQUES OF MATHEMATICAL PROOFS Brahima MBODJE, Ph.D., 2011-06-30 As its title indicates this book is about logic sets and mathematical proofs It is a careful patient and rigorous introduction for readers with very limited mathematical maturity It teaches the reader not only how to read a mathematical proof but also how to write one To achieve this we carefully lay out all the various proof methods encountered in mathematical discourse give their logical justifications and apply them to the study of topics such as real numbers relations functions sequences fine sets infinite sets countable sets uncountable sets and transfinite numbers whose mastery is important for anyone contemplating advanced studies in mathematics The book is completely self contained since the prerequisites for reading it are only a sound background in high school algebra Though this book is meant to be a companion specifically for senior high school pupils and college undergraduate students it will also be of immense value to anyone interested in acquiring the tools and way of thinking of the mathematician

Written by a pair of math teachers and based on their classroom notes and experiences this introductory treatment of theory proof techniques and related concepts is designed for undergraduate courses No knowledge of calculus is assumed making it a useful text for students at many levels The focus is on teaching students to prove theorems and write mathematical proofs so that others can read them Since proving theorems takes lots of practice this text is designed to provide plenty of exercises The authors break the theorems into pieces and walk readers through examples encouraging them to use mathematical notation and write proofs themselves Topics include propositional logic set notation basic set theory proofs relations functions induction countability and some combinatorics including a small amount of probability The text is ideal for courses in discrete mathematics or logic and set theory and its accessibility makes the book equally suitable for classes in mathematics for liberal arts students or courses geared toward proof writing in mathematics **Types for Proofs and**

Writing Proofs in Analysis Jonathan M. Kane, 2016-05-28 This is a textbook on proof writing in the area of analysis balancing a survey of the core concepts of mathematical proof with a tight rigorous examination of the specific tools needed for an understanding of analysis Instead of the standard transition approach to teaching proofs wherein students are taught fundamentals of logic given some common proof strategies such as mathematical induction and presented with a series of well written proofs to mimic this textbook teaches what a student needs to be thinking about when trying to construct a proof Covering the fundamentals of analysis sufficient for a typical beginning Real Analysis course it never loses sight of the fact that its primary focus is about proof writing skills This book aims to give the student precise training in the writing of proofs by explaining exactly what elements make up a correct proof how one goes about constructing an acceptable proof and by learning to recognize a correct proof how to avoid writing incorrect proofs To this end all proofs presented in this text are preceded by detailed explanations describing the thought process one goes through when constructing the proof Over 150 example proofs templates and axioms are presented alongside full color diagrams to elucidate the topics at hand

An Introduction to Proof through Real Analysis Daniel J. Madden, Jason A. Aubrey, 2017-08-14 An engaging and accessible introduction to mathematical proof incorporating ideas from real analysis A mathematical proof is an inferential argument for a mathematical statement Since the time of the ancient Greek mathematicians the proof has been a cornerstone of the science of mathematics The goal of this book is to help students learn to follow and understand the function and structure of mathematical proof and to produce proofs of their own An Introduction to Proof through Real Analysis is based on course material developed and refined over thirty years by Professor Daniel J Madden and was designed to function as a complete text for both first proofs and first analysis courses Written in an engaging and accessible narrative style this book systematically covers the basic techniques of proof writing beginning with real numbers and progressing to logic set theory topology and continuity The book proceeds from natural numbers to rational numbers in a familiar way and justifies the need for a rigorous definition of real numbers The mathematical climax of the story it tells is the Intermediate Value Theorem which justifies the notion that the real numbers are sufficient for solving all geometric problems Concentrates solely on designing proofs by placing instruction on proof writing on top of discussions of specific mathematical subjects Departs from traditional guides to proofs by incorporating elements of both real analysis and algebraic representation Written in an

engaging narrative style to tell the story of proof and its meaning function and construction Uses a particular mathematical idea as the focus of each type of proof presented Developed from material that has been class tested and fine tuned over thirty years in university introductory courses An Introduction to Proof through Real Analysis is the ideal introductory text to proofs for second and third year undergraduate mathematics students especially those who have completed a calculus sequence students learning real analysis for the first time and those learning proofs for the first time Daniel J Madden PhD is an Associate Professor of Mathematics at The University of Arizona Tucson Arizona USA He has taught a junior level course introducing students to the idea of a rigorous proof based on real analysis almost every semester since 1990 Dr Madden is the winner of the 2015 Southwest Section of the Mathematical Association of America Distinguished Teacher Award Jason A Aubrey PhD is Assistant Professor of Mathematics and Director Mathematics Center of the University of Arizona
