Subcommittee on Health,1997 *Research Activities* ,1996 *Fair Resource Allocation and Rationing at the Bedside*
Marion Danis,Samia A. Hurst,Len Fleck,Reidun Forde,Anne Slowther,2014-10-02 Health systems need to set priorities fairly
In one way or another part of this important task will fall to physicians How do they make judgments about resource
stewardship and how should they do so How can they make such decisions in a manner that is compatible with their clinical
duties to patients In this book philosophers bioethicists physicians lawyers and health policy experts make the case that
priority setting and rationing contribute significantly to the possibility of affordable and fair healthcare and that clinicians
play an indispensable role in that process The book depicts the results of a survey of European physicians about their
experiences with rationing and other cost containment strategies and their perception of scarcity and fairness in their health
care systems Responding to and complementing these findings commentators discuss why resource allocation and bedside
rationing is necessary and justifiable The book explores how bedside rationing relates to clinical judgments about medical
necessity and medical indications marginal benefits weak evidence based medicine off label use The book highlights how
comparative studies of health care systems can advance more effective and fair bedside rationing through learning from one
another From a practical standpoint the book offers a number of strategies for health care systems and clinicians to work in
tandem to allocate and ration resources as fairly as possible how to foster more attention to fairness when rationing at the
bedside how to avoid exacerbating health disparities when allocating resources how to teach about bedside rationing to
students how to discuss rationing more explicitly in the public arena and in the doctor s office **Pediatric Informatics**
Christoph Lehmann,George R. Kim,Kevin B. Johnson,2009-07-16 Now is a critical time in pediatric informatics As information
technologies electronic health records EHRs personal health records PHRs computerized physician order entry CPOE and
standards HL7 are developed to improve the quality of health care it is imperative for policy makers and pediatricians to be
aware of their impact on pediatric care and child health Informed child advocates must be at the planning table as national
and regional health information networks are developed to insure the unique health care needs of children are being met
Pediatric Informatics Computer Applications in Child Health is a current digest of the important trends in pediatric
informatics written by leading experts in the field This book explores how the management of biomedical data information
and knowledge can optimize and advance child health The contributors investigate the specific importance of pediatric
informatics is derived from the biological psychological social and cultural needs that the distinguish children from other
populations These distinctions create complexities in the management of pediatric data and information that make children a
vulnerable population and require the development of a new body of knowledge in pediatric informatics
