Ecological Data William K. Michener,James W. Brunt,2009-04-01 Ecologists are increasingly tackling difficult issues like global change loss of biodiversity and sustainability of ecosystem services These and related topics are enormously challenging requiring unprecedented multidisciplinary collaboration and rapid synthesis of large amounts of diverse data into information and ultimately knowledge New sensors computers data collection and storage devices and analytical and statistical methods provide a powerful tool kit to support analyses graphics and visualizations that were unthinkable even a

few years ago New and increased emphasis on accessibility management processing and sharing of high quality well maintained and understandable data represents a significant change in how scientists view and treat data These issues are complex and despite their importance are typically not addressed in database ecological and statistical textbooks This book addresses these issues providing a much needed resource for those involved in designing and implementing ecological research as well as students who are entering the environmental sciences Chapters focus on the design of ecological studies data management principles scientific databases data quality assurance data documentation archiving ecological data and information and processing data into information and knowledge The book stops short of a detailed treatment of data analysis but does provide pointers to the relevant literature in graphics statistics and knowledge discovery The central thesis of the book is that high quality data management systems are critical for addressing future environmental challenges This requires a new approach to how we conduct ecological research that views data as a resource and promotes stewardship recycling and sharing of data Ecological Data will be particularly useful to those ecologists and information specialists that actively design manage and analyze environmental databases However it will also benefit a wider audience of scientists and students in the ecological and environmental sciences   *Proceedings RMRS. ,1998*   Proceedings of the International Conference on Computing in High Energy Physics '95 ,1996 CHEP Computing in High Energy Physics is the largest international meeting of the communities of High Energy Physics Computing Science and the Computing Industry The sixth conference in this series was held in Rio de Janeiro Brazil in September 1995 The focus of the conference was Computing for the next Millennium High Energy Physics is at a point where major changes in the way data acquisition and computing problems are addressed will be called for in the high energy physics programs of the year 2000 and beyond The conference covered a wide spectrum of topics including Data Access Storage and Analysis Data Acquisition and Triggering Worldwide Collaboration and Networking Tools Languages and Software Development Environments and special purpose processing systems The papers presented both recent progress and radical approaches to computing problems as candidates for the basis of future computing in the field of high energy physics Provided by publisher   North American Science Symposium ,1999   Advances in Databases and Information Systems Witold Litwin,Tadeusz Morzy,Gottfried Vossen,1998 This book constitutes the refereed proceedings of the Second East European Symposium on Advances in Databases and Information systems ADBIS 98 held in Poznan Poland in September 1998 The 25 revised full papers presented were selected from a total of 90 submissions and six extended abstracts within a special section East meets West The papers are organized in topical sections on query languges optimization collaborative systems schema integration storage and version management object systems knowledge discovery and the Web and systems design   *The Challenges of Long Term Ecological Research: A Historical Analysis* Robert B. Waide,Sharon E. Kingsland,2021-04-07 This volume explores the challenges of sustaining long term ecological research through a historical analysis of the Long Term Ecological Research Program created by the U S

National Science Foundation in 1980 The book examines reasons for the creation of the Program an overview of its 40 year history and in depth historical analysis of selected sites Themes explored include the broader impact of this program on society including its relevance to environmental policy and understanding global climate change the challenge of extending ecosystem ecology into urban environments and links to creative arts and humanities projects A major theme is the evolution of a new type of network science involving comparative studies innovation in information management creation of socio ecological frameworks development of governance structures and formation of an International Long Term Ecological Research Network with worldwide reach The book s themes will interest historians philosophers and social scientists interested in ecological and environmental sciences as well as researchers across many disciplines who are involved in long term ecological research   **Metadata** Marcia Lei Zeng,Jian Qin,2020-06-22 Zeng and Qin s thorough revision of their benchmark text offers a comprehensive look at the metadata schemas that exist in the world of library and information science and beyond as well as the contexts in which they operate   *Scientific and Statistical Database Management, 7th International Working Conference On* ,1994   Pattern Discovery in Biomolecular Data Jason T. L. Wang,Bruce A. Shapiro,Dennis Shasha,1999-10-28 Finding patterns in biomolecular data particularly in DNA and RNA is at the center of modern biological research These data are complex and growing rapidly so the search for patterns requires increasingly sophisticated computer methods Pattern Discovery in Biomolecular Data provides a clear up to date summary of the principal techniques Each chapter is self contained and the techniques are drawn from many fields including graph theory information theory statistics genetic algorithms computer visualization and vision Since pattern searches often benefit from multiple approaches the book presents methods in their purest form so that readers can best choose the method or combination that fits their needs The chapters focus on finding patterns in DNA RNA and protein sequences finding patterns in 2D and 3D structures and choosing system components This volume will be invaluable for all workers in genomics and genetic analysis and others whose research requires biocomputing   **New Trends in Data Warehousing and Data Analysis** Stanisław Kozielski,Robert Wrembel,2008-11-21 Most of modern enterprises institutions and organizations rely on knowledge based management systems In these systems knowledge is gained from data analysis Today knowledge based management systems include data warehouses as their core components Data integrated in a data warehouse are analyzed by the so called On Line Analytical Processing OLAP applications designed to discover trends patterns of behavior and anomalies as well as finding dependencies between data Massive amounts of integrated data and the complexity of integrated data coming from many different sources make data integration and processing challenging New Trends in Data Warehousing and Data Analysis brings together the most recent research and practical achievements in the DW and OLAP technologies It provides an up to date bibliography of published works and the resource of research achievements Finally the book assists in the dissemination of knowledge in the field of advanced DW and OLAP   *Next Generation Information Technologies and Systems* Ron Y.
