Sex And Longevity Sexuality Gender Reproduction Parenthood:

Sex and Longevity: Sexuality, Gender, Reproduction, Parenthood J.-M. Robine, T.B.L. Kirkwood, M.

Allard, 2012-12-06 A central concept in the evolutionary theory of senescence is the idea that ageing results from life history trade offs. In particular, the disposable soma theory suggests that longevity is determined through the setting of longevity assurance mechanisms so as to provide an optimal compromise between investments in somatic maintenance including stress resistance and in reproduction. Comparative studies among mammalian species confirm that cells from long lived species appear to have a greater intrinsic capacity to withstand stresses than cells from short lived species. Childbearing at older ages has become increasingly common in modern societies because of demographic changes, medical progress and personal choice. While the detrimental effects of late reproduction on infant mortality and genetic diseases have been well documented, little is known about the possible postponed detrimental effects of late parenting. Modulating Aging and Longevity S.I.

Rattan, 2003-09-30 After decades of systematic collection of data describing age related changes in organisms, organs, tissues, cells and macromolecules, biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches. While not giving serious consideration to the claims made by charlatans, it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age related diseases for regaining the functional abilities and for prolonging the lifespan of experimental organisms. This book provides the most up to date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants, vitamins and hormones, genetic engineering, life style alterations and hormesis through mild stress. The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence. **Brain and Longevity** Caleb E. Finch, Jean-Marie Robine, 2013-12-21 In this third volume on

longevity, Fondation Ipsen has again collected the most recent results in research on genes and diet in the evolution of human longevity, educational level and longevity, cognitive impairment and survival at older age and other contributions. The preponderance of relatively short compared to long lived organisms suggests that morphogenesis is easier to accomplish than is maintenance of soma, whereas the broad range of longevity of organisms demonstrates that maintaining soma for extended periods of time is possible. The underlying assumption of the disposable soma theory of aging is that the expense of maintaining somatic cells depends on their contribution to the welfare of the germ cells. *Health Expectations for Older Women* Sarah B. Laditka, 2014-06-11 Explore international trends in health and longevity with a special focus on older women.
