## **Low Power Communications:**

*Low-Power Wireless Communication Circuits and Systems* Kiat Seng Yeo, Kaixue Ma, 2018-05-03 The increasing demand for extremely high data rate communications has urged researchers to develop new communication systems. Currently, wireless transmission with more than one Giga bits per second Gbps data rates is becoming essential due to increased connectivity between different portable and smart devices. To realize Gbps data rates, millimeter wave MMW bands around 60 GHz is attractive due to the availability of large bandwidth of 9 GHz. Recent research work in the Gbps data rates around 60 GHz band has focused on short range indoor applications such as uncompressed video transfer, high speed file transfer between electronic devices and communication to and from kiosk. Many of these applications are limited to 10 m or less because of the huge free space path loss and oxygen absorption for 60 GHz band MMW signal. This book introduces new knowledge and novel circuit techniques to design low power MMW circuits and systems. It also focuses on unlocking the potential applications of the 60 GHz band for high speed outdoor applications. The innovative design application significantly improves and enables high data rate low cost communication links between two access points seamlessly. The 60 GHz transceiver system on chip provides an alternative solution to upgrade existing networks without introducing any building renovation or external network laying works. *Annual Report* United States. *Ultra-Low Power FM-UWB Transceivers for IoT* Vladimir Kopta, Christian Enz, 2022-09-01 Over the past two decades, we have witnessed the increasing popularity of the Internet of Things. The vision of billions of connected objects able to interact with their environment is the key driver directing the development of future communication devices. Today, power consumption as well as the cost and size of radios remain some of the key obstacles towards fulfilling this vision. *Ultra Low Power FM UWB Transceivers for IoT* presents the latest developments in the field of low power wireless communication. It promotes the FM UWB modulation scheme as a candidate for short range communication in different IoT scenarios. The FM UWB has the potential to provide exactly what is missing today. This spread spectrum technique enables significant reduction in transceiver complexity, making it smaller, cheaper and more energy efficient than most alternative options. The book provides an overview of both circuit level and architectural techniques used in low power radio design with a comprehensive

study of state of the art examples It summarizes key theoretical aspects of FM UWB with a glimpse at potential future research directions Finally it gives an insight into a full FM UWB transceiver design from system level specifications down to transistor level design demonstrating the modern power reduction circuit techniques Ultra Low Power FM UWB Transceivers for IoT is a perfect text and reference for engineers working in RF IC design and wireless communication as well as academic staff and graduate students engaged in low power communication systems research Western Radio Corporation V.
