   LUCAS Associative Array Processor Christer Fernstrom,Ivan Kruzela,Bertil Svensson,1986-03 After historical introduction the aspiration technique and imaging modalities are described Thereafter the use of aspiration cytology in the diagnosis and mainly in the sta ging of urologic cancers is on still not well known appli cations of the procedure in the staging of some organs bladder adrenals penis testis and secondary ureteral strictures are reported   The Lucas Associative Array Processor and Its Programming Environment Christer Fernström,1983   *Field-Programmable Logic and Applications: Reconfigurable Computing Is Going Mainstream* Manfred Glesner,Peter Zipf,Michel Renovell,2003-08-02 This book constitutes the refereed proceedings of the 12th International Conference on Field Programmable Logic and Applications FPL 2002 held in Montpellier France in September 2002 The 104 revised regular papers and 27 poster papers presented together with three invited contributions were carefully reviewed and selected from 214 submissions The papers are organized in topical sections on rapid prototyping FPGA synthesis custom computing engines DSP applications reconfigurable fabrics dynamic reconfiguration routing and placement power estimation synthesis issues communication applications new technologies reconfigurable architectures multimedia applications FPGA based arithmetic reconfigurable processors testing and fault tolerance crypto applications multitasking compilation techniques etc   **NEWCAT: Parsing Natural Language Using Left-Associative Grammar** Roland Hausser,1986-07-01   *An Associative Array Processor Supporting a Relational Algebra* Ivan Kruzela,1983   Embedded Systems Albert Kündig,Richard E. Bührer,Jacques Dähler,1987-10-21 This volume contains 11 invited lectures and 42 communications presented at the 13th Conference on Mathematical Foundations of Computer Science MFCS 88 held at Carlsbad Czechoslovakia August 29 September 2 1988 Most of the papers present material from the following four fields complexity theory in particular structural complexity concurrency and parellelism formal language theory semantics Other areas treated in the proceedings include functional programming inductive syntactical synthesis unification algorithms relational databases and incremental attribute evaluation

   Accurate Scientific Computations Willard L. Miranker,Richard A. Toupin,1986-09 Mathematics of Computing Numerical Analysis   **TEX for Scientific Documentation** Jacques Desarmenien,1986-09 Supported by CNRS Centre national de la Recherche scientifique SMF Societe mathematique de France Universite Louis Pasteur de Strasbourg

   CONPAR 1986 Wolfgang Händler,Dieter Haupt,Rolf Jelitsch,Wilfried Juling,Otto Lange,1986-09 Proceedings Parallel Computing   **Negation and Control in Prolog** Lee Naish,1986-10 The contributions to this volume cover all aspects of the assessment and management of hepatobiliary disease The focal points of the book consist of three state of the art summaries The first of these deals with the highly topical problem of liver transplants from the point of view of patient selection The second considers drug induced liver injury in view of the fact that the liver is the main metabolic site for a number of drugs The final summary deals with liver and aging it asks whether the liver follows the aging process of the host

organisms and whether the liver of aged liver transplant candidate donors could be suitable for grafting Aside from these topics the volume presents basic research on hepatic transport mechanisms intrahepatic cholestasis and gall stone disease which serves as a background for the topics more specifically concerning the assessment of liver function Much of the book is then devoted to the management of the commonest forms of liver diseases and their complications such as chronic active hepatitis liver cirrhosis portal hypertension hepatic encephalopathy hepatorenal syndrome and ascites *Mathematical Foundation of Programming Semantics* Austin Melton,1986-10 R ntgenbefund und die sich in ihm widerspiegelnde pathologische Anatomie sind neben dem klinischen Bild die wichtigsten S ulen auf denen die Diagnostik von Knochengeschw lsten und geschwulst hnlichen L sionen beruht Radiologen und Pathologen stellen in diesem Buch Klinik Radiologie und Histolgie der verschiedenen Knochenl sionen am Gliedma en und Achsenskelett umfassend und synoptisch dar Das umfangreiche Material resultiert aus einer f nfzehnj hrigen interdisziplin ren Zusammenarbeit In einem einleitenden Kapitel werden die verschiedenen radiologischen konventionelles R ntgenbild CT Kernspintomographie Angiographie transkutane Biopsie und histologischen Untersuchungstechniken und ihre Wertigkeit beschrieben Der radiologischen Befundungsmethodik von Knochengeschw lsten u a mit Hilfe der Lodwick Graduierung und einem neueren Staging System f r Knochengeschw lste werden eigene Kapitel gewidmet Im speziellen Teil des Buches erfolgt die Darstellung der einzelnen benignen und malignen Knochengeschw lste in einer systematischen Untergliederung in ihre H ufigkeit Lokalisation Alters und Geschlechtspr dilektion Klinik und Prognose Histologie Radiologie und Differentialdiagnose Besonders die unter den Knochengeschw lsten und tumor hnlichen L sionen h ufig vorkommenenden Entit ten sind mit einem umfassenden Bildmaterial ausgestattet um dem breiten Spektrum ihrer Morphologie gerecht zu werden Durch das Verst ndnis klinischer radiologischer und pathologisch anatomischer Befunde werden Diagnostik und Therapie der Skelettl sionen sehr erleichtert Die synoptische Art der Darstellung macht dieses Buch f r alle Disziplinen die sich mit Knochentumoren befassen zu einem idealen Nachschlagewerk **A Connotational Theory of Program Structure** James S. Royer,1987-08-26 This book presents developments of a language independent theory of program structure The theory features a simple natural notion of control structure which is much broader than in other theories of programming languages such as denotational semantics and program schemes This notion permits treatment of control structures which involve not only the denotation of programs i e their input output behavior but also their structure size run times etc The theory also treats the relation of control structure and complexity properties of programming languages The book focuses on expressive interdependencies of control structures which control structures can be expressed by which others A general method of proving control structures expressively independent is developed The book also considers characterizations of the expressive power of general purpose programming languages in terms of control structures Several new characterizations are presented and two compactness results for such characterizations are shown *The Munich Project CIP* ,1988-01-13 This book is the second of two volumes

that present the main results which emerged from the project CIP Computer Aided Intuition Guided Programming at the Technical University of Munich Its central theme is program development by transformation a methodology which is becoming more and more important Whereas Volume I contains the description and formal specification of a wide spectrum language CIP L particularly tailored to the needs of transformational programming Volume II serves a double purpose First it describes a system called CIP S that is to assist a programmer in the method of transformational programming Second it gives a non toy example for this very method since it contains a formal specification of the system core and transformational developments for the more interesting system routines Based on a formal calculus of program transformations the informal requirements for the system are stated Then the system core is formally specified using the algebraic data types and the pre algorithmic logical constructs of the wide spectrum language CIP L It is demonstrated how executable procedural level programs can be developed from this specification according to formal rules The extensive collection of these rules is also contained in the book it can be used as the basis for further developments using this method Since the system has been designed in such a way that it is parameterized with the concrete programming language to be transformed the book also contains a guide how to actualize this parameter the proceeding is exemplified with a small subset of CIP L   Encyclopedia of Microcomputers Allen Kent,James G. Williams,1989-10-05 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general and assesses the future impact of this rapidly changing technology   **PORTAL Language Description** Arnold Businger,1988-03-23   **Systems of Reductions** Benjamin Benninghofen,Susanne Kemmerich,Michael M. Richter,1987-11-25   Global Dynamics of the Earth Roberto Sabadini,Bert Vermeersen,2004-04-30 This volume opens up new perspectives on the physics of the Earth s interior for graduate students and researchers working in the fields of geophysics and geodesy It looks at our planet in an integrated fashion linking the physics of its interior to the geophysical and geodetic techniques that record over a broad spectrum of spatial wavelengths the ongoing modifications in the shape and gravity field of the planet Basic issues related to the rheological properties of the Earth s mantle and to its slow deformation will be understood in both mathematical and physical terms within the framework of an analytical normal mode relaxation theory Fundamentals of this theory are developed in the first tutorial part The second part deals with a wide range of applications ranging from changes in the Earth s rotation to post seismic deformation and sea level variations induced by post glacial rebound In the study of the physics of the Earth s interior the book bridges the gap between seismology and geodynamics   **MetaSoft Primer** Andrzej Blikle,1987-11-25 The book is devoted to a simplified set theoretic version of denotational semantics where sets are used in place of Scott s reflexive domains and where jumps are described without

continuations This approach has emerged as a reaction to the sophisticated model of traditional semantics It was also strongly stimulated by the applications of denotational semantics and especially by its software industry oriented version known as VDM Vienna Development Method The new approach was successfully tested on several examples Based on this approach the Polish Academy of Sciences created the project MetaSoft aimed at the development of a definitional metalanguage for software engineering The approach has also been chosen in the project RAISE ESPRIT which aims at a similar goal The book consists of two parts Part One is devoted to the mathematical foundations of the future definitional metalanguage of MetaSoft This part also introduces an appropriate notation Part Two shows the applications of this metalanguage There the denotational definition of a subset of Pascal is discussed with particular emphasis on Pascal types
