Number Sense:

The Number Sense: How the Mind Creates Mathematics Stanislas Dehaene, 1999-10-30 The Number Sense is an enlightening exploration of the mathematical mind Describing experiments that show that human infants have a rudimentary number sense Stanislas Dehaene suggests that this sense is as basic as our perception of color and that it is wired into the brain Dehaene shows that it was the invention of symbolic systems of numerals that started us on the climb to higher mathematics A fascinating look at the crossroads where numbers and neurons intersect The Number Sense offers an intriguing tour of how the structure of the brain shapes our mathematical abilities and how our mathematics opens up a window on the human mind

Number Sense Routines Jessica F. Shumway, 2011 Just as athletes stretch their muscles before every game and musicians play scales to keep their technique in tune mathematical thinkers and problem solvers can benefit from daily warm up exercises Jessica Shumway has developed a series of routines designed to help young students internalize and deepen their facility with numbers The daily use of these quick five ten or fifteen minute experiences at the beginning of math class will help build students number sense Students with strong number sense understand numbers ways to represent numbers relationships among numbers and number systems They make reasonable estimates compute fluently use reasoning strategies e g relate operations such as addition and subtraction to each other and use visual models based on their number sense to solve problems Students who never develop strong number sense will struggle with nearly all mathematical strands from measurement and geometry to data and equations In Number Sense Routines Jessica shows that number sense can be taught to all students Dozens of classroom examples including conversations among students engaging in number sense routines illustrate how the routines work how children s number sense develops and how to implement responsive routines Additionally teachers will gain a deeper understanding of the underlying math the big ideas skills and strategies children learn as they develop numerical literacy

It Makes Sense! Melissa Conklin, 2010 Ten frames are a model to help students efficiently gain and develop an understanding of addition and subtraction The classroom tested routines games and problem solving lessons in this book use ten frames to develop students natural strategies for adding numbers and fit into any set of state standards or curriculum Provided by publisher

Number Sense Routines Jessica F. Shumway, 2018 Upper elementary teachers have a big job to help students deepen their mathematical understanding and become more efficient mathematicians Number Sense Routines Developing Mathematical Understanding Every Day in Grades 3 5 is about tapping into every child s innate number sense and providing daily connected experiences that are responsive to children s learning needs Through familiar five ten or

fifteen minute warm up routines author Jessica Shumway offers both beginner and veteran teachers easy and effective ways to build and solidify students number sense foundations No matter how familiar the routine Jessica infuses each with new joy depth and life She reveals the careful thinking and planning that goes into each routine and provides detailed vignettes and dialogues of how they unfold in real classrooms She gives teachers a clear view into her nuanced facilitation Each routine becomes an exciting opportunity to understand where students are in their understanding and to help students articulate and extend their mathematical thinking Not only will these routines help develop students mathematical understanding as they move towards using standard algorithms but teachers will learn to better recognize the big ideas that emerge in discussions how to encourage important strategies based in number sense and how to facilitate discussions on key mathematical concepts

The Number Sense: How the Mind Creates Mathematics, Revised and Updated Edition Stanislas Dehaene, 2011-04-01 Our understanding of how the human brain performs mathematical calculations is far from complete but in recent years there have been many exciting breakthroughs by scientists all over the world Now in *The Number Sense* Stanislas Dehaene offers a fascinating look at this recent research in an enlightening exploration of the mathematical mind Dehaene begins with the eye opening discovery that animals including rats pigeons raccoons and chimpanzees can perform simple mathematical calculations and that human infants also have a rudimentary number sense Dehaene suggests that this rudimentary number sense is as basic to the way the brain understands the world as our perception of color or of objects in space and like these other abilities our number sense is wired into the brain These are but a few of the wealth of fascinating observations contained here We also discover for example that because Chinese names for numbers are so short Chinese people can remember up to nine or ten digits at a time English speaking people can only remember seven The book also explores the unique abilities of idiot savants and mathematical geniuses and we meet people whose minute brain lesions render their mathematical ability useless This new and completely updated edition includes all of the most recent scientific data on how numbers are encoded by single neurons and which brain areas activate when we perform calculations Perhaps most important *The Number Sense* reaches many provocative conclusions that will intrigue anyone interested in learning mathematics or the mind A delight Ian Stewart *New Scientist* Read *The Number Sense* for its rich insights into matters as varying as the cuneiform depiction of numbers why Jean Piaget s theory of stages in infant learning is wrong and to discover the brain regions involved in the number sense *The New York Times Book Review* Dehaene weaves the latest technical research into a remarkably lucid and engrossing investigation Even readers normally indifferent to mathematics will find themselves marveling at the wonder of minds making numbers **Booklist**
