Preventive Cardiovascular Nursing Sandra B. Dunbar, Lynne T. Braun, 2024-06-17 This book provides a comprehensive overview of essential concepts and evidence that guide the practice of contemporary preventive cardiovascular nursing. The sections incorporate a lifespan approach to cardiovascular wellness and provide perspectives on sources of known and emerging cardiovascular risk factors as well as the spectrum of multidimensional factors including biological, behavioral, psychological, and sociocultural influences on cardiovascular wellness, risk, and the evolution of cardiovascular conditions. Unique features address:

1. building resilience across the lifespan such that optimal cardiovascular wellness can be attained within multiple contexts of health states to increase a healthy lifespan and longevity
2. behavior change skills for risk factor reduction
3. risk factors and risk reduction approaches with special populations defined by gender, age, and aging health states and health equity issues
4. high level roles for cardiovascular nurses as provider, risk assessor, communicator, and care provider, educator, leader, patient, and health advocate.

Relevant case studies are included throughout to facilitate the application of the content. This book fills a gap in that there is no other book on preventive cardiovascular nursing care and roles, and it provides support for the nurse to lead relevant interdisciplinary teams.
