Oil Security Retrospect Prospect:

The Economics of Energy Security Douglas R. Bohi, Michael A. Toman, 2012-12-06 his volume brings together and expands on research on the subject of energy security externalities that we have conducted over a twenty year period We were motivated to bring this work together by the lack of a comprehensive analysis of the issues involved that was conveniently located in a single document by the desire to focus that disparate body of research on the assessment of energy security externalities for policy purposes and by the continuing concern of researchers and policymakers regarding the issues involved Many misconceptions about energy security continue to persist in spite of a large body of research to the contrary and we hope that this volume will help to dispel them Most of our original research was funded by either the U S Department of Energy or Resources for the Future RFF and all of it was conducted while we served as staff members of RFF To these institutions and to the many individuals who commented on our original work we wish to express our sincere gratitude We also wish to express our appreciation to our colleague Margaret Walls for her substantial contribution to Chapter 7 on transportation policy

energy and outlines several factors underlying the price trend Conservation measures in consumer countries weak economic performance in industrialized nations and new oil and gas producing ventures outside OPEC are among the issues considered Also examined are the energy related strategic planning agendas of OPEC countries and the short term energy market choices and constraints facing them Given the sizable oil reserves available in the Gulf the rising energy demand in Asia and the growing energy needs of the Gulf itself the Gulf region will continue to play a crucial role in the world energy market In this context some of the potential threats to the Gulf position in the world oil market are discussed including the development of energy efficient technologies the competition between gas exporters in the Gulf and the production potential of the former Soviet Union In light of the different issues raised and the finite nature of the energy resources available in the Gulf the book concludes by underlining the urgent need for economic diversification in Gulf nations

Blood or Gold? Michael C. Lynch, 2002-03-19 There are two typical views of energy security and oil crisis with distinct analytical approaches and policy recommendations either politics or economics The geopolitical approach links imports to vulnerability or at least influence and maintains that reduced oil imports improve security One of its major weaknesses is the focus on petroleum trade balances among regions and countries as the critical variable ignoring the fact that oil is a fungible commodity If necessary almost any amount of crude oil an be replaced fairly quickly in the event of a single nation embargo Economics often directly contradict the geopolitical view presuming that all trade is done for money and that specific trade disruptions are irrelevant because oil is a fungible commodity and any disruptions will be resolved through markets Energy security according to this view need only concern itself with the ability of the market to allocate supply efficiently during a disruption Although consumers often treat short term price fluctuations as crises they really represent normal cyclical behavior for a

cartelized commodity Oil crisis are political events but the primary damage is economic through the mechanism of oil price change Even when supply and consumption are relatively balanced hoarding can create or exacerbate price increases A major element that causes hoarding and price changes in a more general sense is uncertainty about supply which is typically worse due to political interference in the market whether international as in 1973 or an exogenous event as in 1979 Future oil crises while far milder than 1979 can be expected to exceed the experience of 1990 in terms of price increase and related economic damage Hoarding appears to be the most likely danger but other elements including policy mistakes remain a concern The passage of time reduces the number of policymakers with experience of oil crises and raises the likelihood of poor policy choices during future supply disruptions However the primary current energy security threat is that of hoarding give the significant probability of supply disruptions which are just large enough to cause price spikes and which would be greatly worsened by the wrong inventory behavior This is pertinent to policy makers because hoarding is rational behavior during a period of supply uncertainty Since the political element of supply disruptions creates or magnifies uncertainty about supply and encourages this trend political intervention to reduce it seems particularly appropriate

Resource Wars

Michael T. Klare, 2024-06-04 This sobering look at the future of warfare predicts that conflicts will now be fought over diminishing supplies of our most precious natural resources From the barren oilfields of Central Asia to the lush Nile delta from the busy shipping lanes of the South China Sea to the uranium mines and diamond fields of sub Saharan Africa Resource Wars looks at the growing impact of resource scarcity on the military policies of nations International security expert Michael T Klare argues that in the early decades of the new millennium wars will be fought not over ideology but over resources as states battle to control dwindling supplies of precious natural commodities The political divisions of the Cold War Klare asserts are giving way to an immense global scramble for essential materials such as oil timber minerals and water And as armies throughout the world define resource security as their primary mission widespread instability is bound to follow especially in those places where resource competition overlaps with long standing disputes over territorial rights A much needed assessment of a changed world Resource Wars is a compelling look at the future of warfare in an era of heightened environmental stress and accelerated economic competition

The Transformation of the World Economy, 1980-93 Robert Solomon, 1994-10-28 The transformation since 1980 of many industrial countries Communist nations and numerous developing countries entails a shift away from government involvement in economies toward greater reliance on market forces This book analyses these dramatic changes in the context of the increasing economic interdependence under the influence of the revolution in computer technology and telecommunications
