Nonlinear Mechanics and Pure Mathematics V. S. Vladimirov, 1995-09-22 Pure Mathematics Geoff Mannall, Michael Kenwood, 2000 A syllabus specific textbook providing worked examples exam level questions and many practice exercises in accordance to the new Edexcel AS and Advanced GCE specification **Automated Theory Formation in Pure Mathematics** Simon Colton, 2012-12-06 In recent years Artificial Intelligence researchers have largely focused their efforts on solving specific problems with less emphasis on the big picture automating large scale tasks which require human level intelligence to undertake The subject of this book automated theory formation in mathematics is such a large scale task Automated theory formation requires the invention of new concepts the calculating of examples the making of conjectures and the proving of theorems This book representing four years of PhD work by Dr Simon Colton demonstrates how theory formation can be automated Building on over 20 years of research into constructing an automated mathematician carried out in Professor Alan Bundy s mathematical reasoning group in Edinburgh Dr Colton has implemented the HR system as a solution to the problem of forming theories by computer HR uses various pieces of mathematical software including automated theorem provers model generators and databases to build a theory from the bare minimum of information the axioms of a domain The main application of this work has been mathematical discovery and HR has had many successes In particular it has invented 20 new types of number of sufficient interest to be accepted into the Encyclopaedia of Integer Sequences a repository of over 60 000 sequences contributed by many human mathematicians Machine Learning In Pure

Mathematics And Theoretical Physics Yang-hui He, 2023-06-21 The juxtaposition of machine learning and pure mathematics and theoretical physics may first appear as contradictory in terms The rigours of proofs and derivations in the latter seem to reside in a different world from the randomness of data and statistics in the former Yet an often under appreciated component of mathematical discovery typically not presented in a final draft is experimentation both with ideas and with mathematical data Think of the teenage Gauss who conjectured the Prime Number Theorem by plotting the prime counting function many decades before complex analysis was formalized to offer a proof Can modern technology in part mimic Gauss's intuition The past five years saw an explosion of activity in using AI to assist the human mind in uncovering new mathematics finding patterns accelerating computations and raising conjectures via the machine learning of pure noiseless data The aim of this book a first of its kind is to collect research and survey articles from experts in this emerging dialogue between theoretical mathematics and machine learning It does not dwell on the well known multitude of mathematical techniques in deep learning but focuses on the reverse relationship how machine learning helps with mathematics Taking a panoramic approach the topics range from combinatorics to number theory and from geometry to quantum field theory and string theory Aimed at PhD students as well as seasoned researchers each self contained chapter offers a glimpse of an exciting future of this symbiosis

Studies in Pure Mathematics ERDÖS, 2013-12-01 This volume written by his friends collaborators and students is offered to the memory of Paul Turán Most of the papers they contributed discuss subjects related to his own fields of research The wide range of topics reflects the versatility of his mathematical activity His work has inspired many mathematicians in analytic number theory theory of

functions of a complex variable interpolation and approximation theory numerical algebra differential equations statistical group theory and theory of graphs Beyond the influence of his deep and important results he had the exceptional ability to communicate to others his enthusiasm for mathematics One of the strengths of Turan was to ask unusual questions that became starting points of many further results sometimes opening up new fields of research We hope that this volume will illustrate this aspect of his work adequately Born in Budapest on August 28 1910 Paul Turan obtained his Ph D under L Fejer in 1935 His love for mathematics enabled him to work even under inhuman circumstances during the darkest years of the Second World War One of his major achievements his power sum method originated in this period After the war he was visiting professor in Denmark and in Princeton In 1949 he became professor at the Eotvos Lorand University of Budapest a member of the Hungarian Academy of Sciences and a leading figure of the Hungarian mathematical community **A**
