Long-Run Determinants of the Real Exchange Rate Mr. Hamid Faruquee, 1994-08-01 This paper examines the long run determinants of the real exchange rate from a stock flow perspective The empirical analysis estimates a long run relationship between the real exchange rate net foreign assets and other factors affecting trade flows Using postwar data for the United States and Japan cointegration analysis supports the finding that the structural factors underlying each country's net trade and net foreign asset positions determine the long run path for the real value of the dollar and the yen The empirical analysis also provides estimates for the underlying stochastic trend in each real exchange rate series

Real and Nominal Exchange Rates in the Long Run Mr. Bankim Chadha, Mr. Charles Adams, 1991-06-01 This paper decomposes longer run movements in major dollar real exchange rates into components associated with changes in nominal exchange rates and price levels and their comovements Though the decompositions suggest some permanent movements they imply that there are large transitory components in real exchange rates These transitory components in real exchange rates are found to be closely associated with those in nominal exchange rates A stochastic version of Dornbusch's overshooting model configured with representative parameter values for the United States and subjected to permanent nominal shocks can rationalize these transitory comovements of nominal and real exchange rates as well as several other features of the decompositions

The Determinants of U.S. Real Interest Rates in the Long Run Ms. Sharmini Coorey, 1991-12-01 This paper examines the factors which influence the behavior of real interest rates in the United States over the long run Data on real and nominal returns to bonds and equities are tested for unit root non stationarity The results indicate that real and nominal interest rates and inflation are integrated of order one while the evidence on returns to equities is mixed Short and long term real rates were found to be cointegrated with government

Unmanned Driving Systems for Smart Trains Hui Liu, 2020-11-13 Unmanned Driving Systems for Smart Trains explores the core technologies involved in unmanned driving systems for smart railways and trains from foundational theory to the latest advances The volume introduces the key technologies research results and frontiers of the field Each chapter includes practical cases to ground theory in practice Seven chapters cover key aspects of unmanned driving systems for smart trains including performance evaluation algorithm based reasoning and learning strategy main control parameters data mining and processing energy saving optimization and control and intelligent algorithm simulation platforms This book will help researchers find solutions in developing better unmanned driving systems Responds to the expansion of smart railways and the adoption of unmanned global systems Covers core technologies of unmanned driving systems for smart trains Details a large number of case studies and experimental designs for unmanned railway systems Adopts a multidisciplinary view where disciplines intersect at key points Gives both foundational theory and the latest theoretical and practical advances for unmanned railways

Do Long-Run Productivity Differentials Explain Long-Run Real Exchange Rates? Mr. Enrique G. Mendoza, Patrick K. Asea, 1994-05-01 We develop a two country balanced growth intertemporal general equilibrium model to examine two predictions of the Balassa Samuelson model namely that i productivity differentials determine the domestic relative price of nontradables and ii deviations from purchasing power parity reflect differences in the relative price of nontradables In our model the equilibrium relative price of nontradables along the long run balanced growth path is determined by the ratio of the marginal products of labor in the tradable and nontradable sectors The empirical relevance of the Balassa Samuelson predictions is examined using the Hodrick Prescott filter to extract long run components from a panel database for fourteen OECD countries The evidence indicates that labor productivity differentials do explain long run cross country differences in relative prices The predicted relative prices however are of little help in explaining long run deviations from purchasing power parity
