Recent Advances in Intelligent Paradigms and Applications Ajith Abraham, 2013-03-20 Digital systems that bring together the computing capacity for processing large bodies of information with the human cognitive capability are called intelligent systems Building these systems has become one of the great goals of modern technology This goal has both intellectual and economic incentives The need for such intelligent systems has become more intense in the face of the global connectivity of the internet There has become an almost insatiable requirement for instantaneous information and decision brought about by this confluence of computing and communication This requirement can only be satisfied by the construction of innovative intelligent systems A second and perhaps an even more significant development is the great advances being made in genetics and related areas of biotechnology Future developments in biotechnology may open the possibility for the development of a true human silicon interaction at the micro level neural and cellular bringing about a need for intelligent systems What is needed to further the development of intelligent systems are tools to enable the representation of human cognition in a manner that allows formal manipulation The idea of developing such an algebra goes back to Leibniz in the 17th century with his dream of a calculus ratiocinator It wasn't until two hundred years later beginning with the work of Boole Cantor and Frege that a formal mathematical logic for modeling human reasoning was developed The introduction of the modern digital computer during the Second World War by von Neumann and others was a culmination of this intellectual trend *Recent Advances in Intelligent Paradigms and Applications* Ajith Abraham, 2014-09-01

Cartwright,Les M. Sztandera,2012-12-06 The contributions to this book cover a wide range of applications of Soft Computing to the chemical domain The early roots of Soft Computing can be traced back to Lotfi Zadeh s work on soft data analysis 1 published in 1981 Soft Computing itself became fully established about 10 years later when the Berkeley Initiative in Soft Computing SISC an industrial liaison program was put in place at the University of California Berkeley Soft Computing applications are characterized by their

ability to approximate many different kinds of real world systems tolerate imprecision partial truth and uncertainty and learn from their environment Such characteristics commonly lead to a better ability to match reality than other approaches can provide generating solutions of low cost high robustness and tractability Zadeh has argued that soft computing provides a solid foundation for the conception design and application of intelligent systems employing its methodologies symbiotically rather than in isolation There exists an implicit commitment to take advantage of the fusion of the various methodologies since such a fusion can lead to combinations that may provide performance well beyond that offered by any single technique

Interpretability Issues in Fuzzy Modeling Jorge Casillas,O. Córdón,Francisco Herrera Triguero,Luis Magdalena,2013-06-05 Fuzzy modeling has become one of the most productive and successful results of fuzzy logic Among others it has been applied to knowledge discovery automatic classification long term prediction or medical and engineering analysis The research developed in the topic during the last two decades has been mainly focused on exploiting the fuzzy model flexibility to obtain the highest accuracy This approach usually sets aside the interpretability of the obtained models However we should remember the initial philosophy of fuzzy sets theory directed to serve the bridge between the human understanding and the machine processing In this challenge the ability of fuzzy models to express the behavior of the real system in a comprehensible manner acquires a great importance This book collects the works of a group of experts in the field that advocate the interpretability improvements as a mechanism to obtain well balanced fuzzy models **Soft Computing in Measurement and Information Acquisition** Leon Reznik,Vladik Kreinovich,2012-12-06 This volume covers the fields of measurement and information acquisition It contains a collection of papers representing the current research trends in these areas What are those trends The first one is the enormous growth in the amount of information and the amazing technologies which make this information available anywhere and anytime The second one is a substantial development of methods of the information presentation including to name just a few multimedia virtual environment computer animation The third one is the all time boosting demand for improving the quality of decisions made on the base of this information in various applications ranging from engineering to business Nowadays information acquisition should not only provide more information but also provide it in such a way as to assure effective and efficient processing of this information And here comes a relatively new methodology of soft computing Application of soft computing in measurement and information acquisition is considered in this volume **Fuzzy Sets Based Heuristics for Optimization** José-Luis Verdegay,2012-11-03 The aim of this volume is to show how Fuzzy Sets and Systems can help to provide robust and adaptive heuristic optimization algorithms in a variety of situations The book presents the state of the art and gives a broad overview on the real practical applications that Fuzzy Sets based on heuristic algorithms have **Applied Decision Support with Soft Computing** Xinghuo Yu,2012-12-06 Soft computing has provided sophisticated methodologies for the development of intelligent decision support systems Fast advances in soft computing technologies such as fuzzy logic and systems artificial

neural networks and evolutionary computation have made available powerful problem representation and modelling paradigms and learning and optimisation mechanisms for addressing modern decision making issues This book provides a comprehensive coverage of up to date conceptual frameworks in broadly perceived decision support systems and successful applications Different from other existing books this volume predominately focuses on applied decision support with soft computing Areas covered include planning management finance and administration in both the private and public sectors
