Recent Advances in Intrusion Detection Herve Debar,Ludovic Me,S. Felix Wu,2003-06-26 Since 1998 RAID has established its reputation as the main event in research on intrusion detection both in Europe and the United States Every year RAID gathers researchers security vendors and security practitioners to listen to the most recent research results in the area as well as experiments and deployment issues This year RAID has grown one step further to establish itself as a well known event in the security community with the publication of hardcopy proceedings RAID 2000 received 26 paper submissions from 10 countries and 3 continents The program committee selected 14 papers for publication and examined 6 of them for presentation In addition RAID 2000 received 30 extended abstracts proposals 15 of these extended abstracts were accepted for presentation tended abstracts are available on the website of the RAID symposium series <http://www.raid-symposium.org> We would like to thank the technical program committee for the help we received in reviewing the papers as well as all the authors for their participation and submissions even for those rejected As in previous RAID symposiums the program alternates between fundamental research issues such as new technologies for intrusion detection and more practical issues linked to the deployment and operation of intrusion detection systems in a real environment Five sessions have been devoted to intrusion detection technology including modeling data mining and advanced techniques

**Information Assurance** Yi Qian, David Tipper, Prashant Krishnamurthy, James Joshi, 2010-07-27 In today's fast paced infocentric environment professionals increasingly rely on networked information technology to do business Unfortunately with the advent of such technology came new and complex problems that continue to threaten the availability integrity and confidentiality of our electronic information It is therefore absolutely imperative to take measures to protect and defend information systems by ensuring their security and non repudiation Information Assurance skillfully addresses this issue by detailing the sufficient capacity networked systems need to operate while under

attack and itemizing failsafe design features such as alarms restoration protocols and management configurations to detect problems and automatically diagnose and respond Moreover this volume is unique in providing comprehensive coverage of both state of the art survivability and security techniques and the manner in which these two components interact to build robust Information Assurance IA The first and so far only book to combine coverage of both security AND survivability in a networked information technology setting Leading industry and academic researchers provide state of the art survivability and security techniques and explain how these components interact in providing information assurance Additional focus on security and survivability issues in wireless networks **Proceedings of the ...
