Algorithms and Model Formulations in Mathematical Programming Stein W. Wallace, 2012-12-06 The NATO Advanced Research Workshop ARW Algorithms and Model Formulations in Mathematical Programming was held at Chr Michelsen Institute in Bergen Norway from June 15 to June 19 1987 The ARW was organized on behalf of the Committee on Algorithms COAL of the Mathematical Programming Society MPS Co directors were Jan Telgen Van Dien Co Organisatie Utrecht The Netherlands and Roger J B Wets The University of California at Davis USA 43 participants from 11 countries attended the ARW The workshop was organized such that each day started with a minute keynote presentation followed by a 45 minute plenary discussion The first part of this book contains the contributions of the five keynote speakers The plenary discussions were taped and the transcripts given to the keynote speakers They have treated the transcripts differently some by working the discussions into their papers others by adding a section which sums up the discussions The plenary discussions were very interesting and stimulating due to active participation of the audience The five keynote speakers were asked to view the topic of the workshop the interaction between algorithms and model formulations from different perspectives On the first day of the workshop Professor Alexander H G Rinnooy Kan Erasmus University Rotterdam The Netherlands put the theme into a larger context by his talk Mathematical programming as an intellectual activity This is an article of importance to any mathematical programmer who is interested in his field s history and present state

Recent Advances in Algorithmic Differentiation Shaun Forth, Paul Hovland, Eric Phipps, Jean Utke, Andrea Walther, 2012-07-30 The proceedings represent the state of knowledge in the area of algorithmic differentiation AD The 31 contributed papers presented at the AD2012

conference cover the application of AD to many areas in science and engineering as well as aspects of AD theory and its implementation in tools For all papers the referees selected from the program committee and the greater community as well as the editors have emphasized accessibility of the presented ideas also to non AD experts In the AD tools arena new implementations are introduced covering for example Java and graphical modeling environments or join the set of existing tools for Fortran New developments in AD algorithms target the efficiency of matrix operation derivatives detection and exploitation of sparsity partial separability the treatment of nonsmooth functions and other high level mathematical aspects of the numerical computations to be differentiated Applications stem from the Earth sciences nuclear engineering fluid dynamics and chemistry to name just a few In many cases the applications in a given area of science or engineering share characteristics that require specific approaches to enable AD capabilities or provide an opportunity for efficiency gains in the derivative computation The description of these characteristics and of the techniques for successfully using AD should make the proceedings a valuable source of information for users of AD tools

Recent Advances in Model Predictive Control Timm

Faulwasser,Matthias A. Müller,Karl Worthmann,2021-04-17 This book focuses on distributed and economic Model Predictive Control MPC with applications in different fields MPC is one of the most successful advanced control methodologies due to the simplicity of the basic idea measure the current state predict and optimize the future behavior of the plant to determine an input signal and repeat this procedure ad infinitum and its capability to deal with constrained nonlinear multi input multi output systems While the basic idea is simple the rigorous analysis of the MPC closed loop can be quite involved Here distributed means that either the computation is distributed to meet real time requirements for very large scale systems or that distributed agents act autonomously while being coupled via the constraints and or the control objective In the latter case communication is necessary to maintain feasibility or to recover system wide optimal performance The term economic refers to general control tasks and thus goes beyond the typically predominant control objective of set point stabilization Here recently developed concepts like strict dissipativity of optimal control problems or turnpike properties play a crucial role The book collects research and survey articles on recent ideas and it provides perspectives on current trends in nonlinear model predictive control Indeed the book is the outcome of a series of six workshops funded by the German Research Foundation DFG involving early stage career scientists from different countries and from leading European industry stakeholders

Recent Advances in Computational Intelligence in Defense and Security Rami Abielmona, Rafael Falcon, Nur Zincir-Heywood, Hussein A. Abbass, 2015-12-21 This volume is an initiative undertaken by the IEEE Computational Intelligence Society's Task Force on Security Surveillance and Defense to consolidate and disseminate the role of CI techniques in the design development and deployment of security and defense

solutions Applications range from the detection of buried explosive hazards in a battlefield to the control of unmanned underwater vehicles the delivery of superior video analytics for protecting critical infrastructures or the development of stronger intrusion detection systems and the design of military surveillance networks Defense scientists industry experts academicians and practitioners alike will all benefit from the wide spectrum of successful applications compiled in this volume Senior undergraduate or graduate students may also discover uncharted territory for their own research endeavors

Integer Programming and Combinatorial Optimization Friedrich Eisenbrand, Bruce Shepherd, 2010-06-09 The idea of a refereed conference for the mathematical programming community was proposed by Ravi Kannan and William Pulleyblank to the Mathematical Programming Society MPS in the late 1980s Thus IPCO was born and MPS has sponsored the conference as one of its main events since IPCO I at the University of Waterloo in 1990 The conference has become the main forum for recent results in Integer Programming and Combinatorial Optimization in the non Symposium years This volume compiles the papers presented at IPCO XIV held June 9 11 2010 at EPFL in Lausanne The scope of papers considered for IPCO XIV is likely broader than at IPCO I This is sometimes due to the wealth of new questions and directions brought from related areas It can also be due to the successful application of math programming techniques to models not traditionally considered In any case the interest in IPCO is greater than ever and this is reflected in both the number 135 and quality of the submissions The Programme Committee with 13 members was also IPCO's largest We thank the members of the committee as well as their sub reviewers for their exceptional and time consuming work and especially during the online committee meeting held over January The process resulted in the selection of 34 excellent research papers which were presented in non parallel sessions over three days in Lausanne Unavoidably this has meant that many excellent submissions were not able to be included

Algebraic and Geometric Ideas in the Theory of Discrete Optimization Jesus A. De Loera, Raymond Hemmecke, Matthias Kopeck, 2013-01-31 In recent years many new techniques have emerged in the mathematical theory of discrete optimization that have proven to be effective in solving a number of hard problems This book presents these recent advances particularly those that arise from algebraic geometry commutative algebra convex and discrete geometry generating functions and other tools normally considered outside of the standard curriculum in optimization These new techniques all of which are presented with minimal prerequisites provide a transition from linear to nonlinear discrete optimization This book can be used as a textbook for advanced undergraduates or first year graduate students in mathematics computer science or operations research It is also appropriate for mathematicians engineers and scientists engaged in computation who wish to gain a deeper understanding of how and why algorithms work
