Recent Advances In Problems Of Flow And Transport In Porous Media:

Recent Advances in Problems of Flow and Transport in Porous Media J.M. Crolet, M. El Hatri, 2013-06-29 Porous media and especially phenomena of transport in such materials are an important field of interest for geologists hydrogeologists researchers in soil and fluid mechanics petroleum and chemical engineers physicists and scientists in many other disciplines The development of better numerical simulation techniques in combination with the enormous expansion of computer tools have enabled numerical simulation of transport phenomena mass of phases and components energy etc in porous domains of interest Before any practical application of the results of such simulations can be used it is essential that the simulation models have been proven to be valid In order to establish the greatest possible coherence between the models and the physical reality frequent interaction between numericians mathematicians and the previously quoted researchers is necessary Once this coherence is established the numerical simulations could be used to predict various phenomena such as water management propagation of pollutants etc These simulations could be in many cases the only financially acceptable tool to carry out an investigation Current studies within various fields of applications include not only physical comprehension aspects of flow and energy or solute transport in saturated or unsaturated media but also numerical aspects in deriving strong complex equations Among the various fields of applications generally two types of problems can be observed Those associated with the pollution of the environment and those linked to water management The former are essentially a problem in industrialized countries the latter are a major source of concern in North Africa

Computational Methods for Flow and Transport in Porous Media J.M. Crolet, 2013-03-14 The first Symposium on Recent Advances in Problems of Flow and Transport in Porous Media was held in Marrakech in June 96 and has provided a focus for the utilization of computer methods for solving the many complex problems encountered in the field of solute transport in porous media This symposium has been successful in bringing together scientists physicists hydrogeologists researchers in soil and fluid mechanics and engineers involved in this multidisciplinary subject It is clear that the utilization of computer based models in this domain is still rapidly expanding and that new and novel solutions are being developed The contributed papers which form this book reflect the recent advances in particular with respect to new methods inverse problems reactive transport unsaturated media and upscaling These have been subdivided into the following sections I Numerical methods II Mass transport and heat transfer III Comparison with experimentation and simulation of real cases This book contains reviewed articles of the top presentations held during the International Symposium on Computer Methods in Porous Media Engineering which took place in Giens France in October 1998 All of the presentations and the optimism shown during the meeting provided further evidence that computer modeling is making remarkable progress and is indeed becoming an essential toolkit in the field of porous media and solute transport I believe that the content of this book provides evidence of this and furthermore gives a comprehensive review of the theoretical developments and applications

Recent Advances in the Modeling of Hydrologic Systems D.S Bowles, P. Enda O'Connell, 2012-12-06 Modeling of the rainfall runoff process is of both scientific and practical significance Many of the currently used mathematical models of hydrologic systems were developed a generation ago Much of the effort since then has focused on refining these models rather than on developing new models based on improved scientific understanding In the past few years however a renewed effort has been made to improve both our fundamental understanding of hydrologic processes and to exploit technological advances in computing and remote sensing It is against this background that the NATO Advanced Study Institute on Recent Advances in the Modeling of Hydrologic Systems was organized The idea for holding a NATO ASI on this topic grew out of an informal discussion between one of the co directors and Professor Francisco Nunes Correia at a previous NATO ASI held at Tucson Arizona in 1985 The Special Program Panel on Global Transport Mechanisms in the Geo Sciences of the NATO Scientific Affairs Division agreed to sponsor the ASI and an organizing committee was formed The committee comprised the co directors Professor David S Bowles U S A and Professor P Enda O Connell U K and Professor Francisco Nunes Correia Portugal Dr Donn G DeCoursey U S A and Professor Ezio Todini Italy

Dong,Jing Wang,Zhehui Jin,Feng Yang,Yulong Zhao,2022-06-30 **The Handbook of Groundwater Engineering** Jacques W. Delleur,2010-12-12 Due to the increasing demand for adequate water supply caused by the augmenting global population groundwater production has acquired a new importance In many areas surface waters are not available in sufficient quantity

or quality Thus an increasing demand for groundwater has resulted However the residence of time of groundwater can be of the order of thousands of years while surface waters is of the order of days Therefore substantially more attention is warranted for transport processes and pollution remediation in groundwater than for surface waters Similarly pollution remediation problems in groundwater are generally complex This excellent timely resource covers the field of groundwater from an engineering perspective comprehensively addressing the range of subjects related to subsurface hydrology It provides a practical treatment of the flow of groundwater the transport of substances the construction of wells and well fields the production of groundwater and site characterization and remediation of groundwater pollution No other reference specializes in groundwater engineering to such a broad range of subjects Its use extends to The engineer designing a well or well field The engineer designing or operating a landfill facility for municipal or hazardous wastes The hydrogeologist investigating a contaminant plume The engineer examining the remediation of a groundwater pollution problem The engineer or lawyer studying the laws and regulations related to groundwater quality The scientist analyzing the mechanics of solute transport The geohydrologist assessing the regional modeling of aquifers The geophysicist determining the characterization of an aquifer The cartographer mapping aquifer characteristics The practitioner planning a monitoring network
