GLOBAL EPIDEMIOLOGY OF CANCER Cancer is the second highest cause of death in the United States and a leading cause of death globally. Our goals are to discuss the global epidemiology of various cancers with detailed information on their prevalence, incidence, and clinical considerations. Epidemiology is the key to understanding the mortality and morbidity of cancer and how we can prevent, diagnose, and treat the disease. Prevention of cancer is essential for saving lives. Prevalence and incidence of cancer are key factors that each government and population must be aware of. Advances in the study of cancer occur on a regular basis, and this book provides the latest insights about relationships between the disease and stem cells, tumorigenesis, molecular interactions, pathways, channels, and immunity. **Global Epidemiology of Cancer: Diagnosis and Treatment** meets the needs of readers by providing current information about epidemiology, including molecular epidemiology, diagnosis, and treatment. Providing logical step-by-step information on various cancers, this book consolidates all of the most up-to-date information and data from verified studies on all different types of cancers in the United States and throughout the world. Chapters are presented so that each includes an overview, clinical manifestations, epidemiology, pathophysiology, etiology, and risk factors, diagnosis, treatment, prevention, and prognosis. **Global Epidemiology of Cancer: Diagnosis and Treatment** will be invaluable to graduate and postgraduate students, including medical students, nurses, physician assistants, residents in oncology, public health students, and allied health students.
