The New Science of Geology Martin J.S. Rudwick, 2023-04-14 The science of geology was constructed in the decades around 1800 from earlier practices that had been significantly different in their cognitive goals In the studies collected here Martin Rudwick traces how it came to be recognised as a new kind of natural science because it was constituted around the idea that the natural world had its own history The earth had to be understood not only in relation to unchanging natural laws that could be observed in action in the present but also in terms of a pre human past that could be reliably known even if not directly observable and its traces only fragmentarily preserved In contrast to this radically novel sense of nature s own contingent history the earth s unimaginably vast timescale was already taken for granted by many naturalists though not yet by the wider public and the concurrent development of biblical scholarship precluded any significant sense of conflict with religious tradition A companion volume Lyell and Darwin Geologists Studies in the Earth Sciences in the Age of Reform was published in 2005

The Bloomsbury Handbook of the Philosophy of the Historical Sciences and Big History Aviezer Tucker, David Cernín, 2025-08-21 This handbook examines the philosophy of the historical

sciences and their synthesis in concepts like Big or Deep History Written by interdisciplinary philosophers historians and scientists it acts as a valuable guide for anybody interested in scientific knowledge of the deep past Big History and the philosophy of science The Bloomsbury Handbook of the Philosophy of the Historical Sciences and Big History is the first philosophical reference work to recognize that History is not what it used to be the historical sciences Deep History Big History and even the history of the Anthropocene have now expanded the scope of historiography beyond that of literate civilizations to cover all scientific inferences about the past from the Big Bang through the history of the planet and the history of life to the history of humanity Different views about the scope of History have ontological epistemic methodological explanatory ethical and educational reasons and implications The historical sciences and the knowledge they have generated are founded on theories of knowledge of the past epistemology of history The contributions in this book consider whether there are common epistemic properties to all the historical sciences that distinguish them from non historical or theoretical sciences The first part of the handbook examines the recent expansion of the scope of the historical sciences in Big History natural history global history and environmental history and older broader concepts of history like universal history and philosophy of history The second part of the handbook addresses the ontology and epistemology of the past including the basic concepts of the historical sciences such as origins the end of history determination and underdetermination contingency and necessity historical predictions and counterfactuals and historical pseudoscience The third part examines the philosophies of the special historical sciences historical linguistics textual criticism geology evolutionary biology systematics archaeology cosmology history of the environment and most significantly their integrations and combinations for example how genetics archaeology and historical linguistics have generated a whole new knowledge of deep human history This collection offers an overview of what the philosophy of the historical sciences is and is becoming for students and experts alike

Studies on Eighteenth-Century Geology Rhoda Rappaport, edited by Kenneth L. Taylor, 2023-04-21 In a scholarly career spanning five decades Rhoda Rappaport published perceptive analyses of science in the culture of early Modern Europe France in particular with strong emphasis on geology's early development Of the sixteen papers in this volume most focus on aspects of geology's cultivation during the long 18th century from the times of Hooke Leibniz and Fontenelle to those of Lavoisier Werner and Cuvier Among the topics most closely treated here are the French mineralogical mapping project initiated by Guettard contemporary efforts to interpret the earth historically such as through Noah's Flood and difficulties presented by the vocabulary often used in traditional histories of geology Much of Rappaport's research addressed two problems prevalent within 18th century earth science the proper understanding of petrifications or fossil objects and struggles to establish reliable knowledge of the earth's past She also examined the chemistry of G F Rouelle which she saw as effectively an attempt at systematic comprehension of the entire mineral realm transnational features of scientific pursuits as illustrated in the careers of the naturalist Vallisneri and the mineralogist and philosophe d Holbach and

aspects of science's promotion in France through government patronage and academic privilege

The Darwinian Paradigm Michael Ruse, 2005-08-18 First published in 1989 Routledge is an imprint of Taylor Francis an informa company

Kuhn's Evolutionary Social Epistemology K. Brad Wray, 2011-09-29 Kuhn's Structure of Scientific Revolutions 1962 has been enduringly influential in philosophy of science challenging many common presuppositions about the nature of science and the growth of scientific knowledge However philosophers have misunderstood Kuhn's view treating him as a relativist or social constructionist In this book Brad Wray argues that Kuhn provides a useful framework for developing an epistemology of science that takes account of the constructive role that social factors play in scientific inquiry He examines the core concepts of Structure and explains the main characteristics of both

Kuhn's evolutionary epistemology and his social epistemology relating Structure to Kuhn's developed view presented in his later writings. The discussion includes analyses of the Copernican revolution in astronomy and the plate tectonics revolution in geology. The book will be useful for scholars working in science studies, sociologists and historians of science as well as philosophers of science.

Thomas Kuhn's Revolutions James A. Marcum, 2015-10-22 This new edition of Thomas Kuhn's *Revolution* marks the 50th anniversary of the publication of Kuhn's most influential work. Drawing on the rich archival sources at MIT and engaging fully with current scholarship, James Marcum provides the historical background to the development of *The Structure of Scientific Revolutions*, exploring the shift Kuhn makes from a historical to an evolutionary philosophy of science and examining Kuhn's legacy in depth. Marcum answers key questions: What exactly was Kuhn's historiographic revolution and how did it come about? Why did it have the impact it did? What will its future impact be for both academia and society? Marcum's answers build a new portrait of Kuhn: his personality, his pedagogical style and the intellectual and social context in which he practiced his trade. *Thomas Kuhn's Revolution* shows how Kuhn transcends the boundaries of the philosophy of science, influencing sociologists, economists, theologians and even policy makers and politicians. This is a comprehensive historical and conceptual introduction to the man who changed our understanding of science.

Museum Revolutions Simon Knell, Suzanne MacLeod, Sheila Watson, 2007-09-12 Capturing the richness of the museum studies discipline, *Museum Revolutions* is the ideal text for museum studies courses, providing a wide range of interlinked themes and the latest thought and research from experts in the field.

Functions and Uses of Disciplinary Histories Loren Graham, Wolf Lepenies, P. Weingart, 2012-12-06 Edward Gibbon's allegation at the beginning of his *Essay on the Study of Literature* (1764) that the history of empires is that of the miseries of humankind, whereas the history of the sciences is that of their splendour and happiness, has for a long time been accepted by professional scientists and by historians of science alike. For its practitioner, the history of a discipline displayed above all the always difficult but finally rewarding approach to a truth which was incorporated in the discipline in its actual form. Looking back, it was only too easy to distinguish those who erred and heretics in the field from the few forerunners of true science. On the one hand, the traditional history of science was told as a story of hero and hero worship; on the other hand, it was paradoxically enough the constant attempt to remind the scientist whom he should better forget. It is not surprising at all, therefore, that the traditional history of science was a field of only minor interest for the practitioner of a distinct scientific discipline or specialty and at the same time a hardly challenging task for the professional historian. Nietzsche had already described the historian of science as someone who arrives late after harvest time; it is somebody who is only a tolerated guest at the thanksgiving dinner of the scientific community.
