Recent Trends In Regeneration Research:

Recent Trends in Regeneration Research V. Kiortsis, S. Koussoulakos, H. Wallace, 2012-12-06 Regeneration i.e. the replacement of lost body parts by new outgrowths or by remodelling existing tissues has been studied for centuries However in recent years important developments took place in this field too owing to new sophisticated techniques and to novel theoretical concepts Advances in Molecular Genetics Biochemistry Cell and Neurobiology Immunology to mention a few of them are the main causes of this resurgence of interest in regeneration As a consequence more and more meetings and publications are devoted either exclusively or for a large part to basic and applied research of regenerative processes Regenerationists scattered in laboratories all over the world and accustomed to know each other through exchange of reprints occasionally an encounter in a large conference tend now to form small groups even societies and to institutionalize their meetings Although the critical mass of scientists involved in regeneration research does not seem yet to be reached for an autonomous development of this sector regular and frequent meetings of experts appear useful even necessary Such a meeting was convened in Saronis near Athens Greece from 19 to 23 September 1988 and sponsored by the NATO Science Committee and the University of Athens The present volume contains the contributions to this Advanced Research Workshop on Recent Trends in Regeneration Research About 50 biologists from different countries either members of the Alliance or outside it U R S S India Egypt Switzerland Sweden took part mostly as invited speakers

Functional tissue engineering for regenerative medical research and new drug development Junxi Wu,Fengxuan Han,Christopher McCormick,2025-06-19 The animal based model remains the predominant research platform in biomedical and pharmaceutical research Animal usage in the UK alone increased by 6% in 2021 with mice and rats accounting for just under 1 million experimental procedures However the mismatch between animal models and clinical reality e g species barrier age mismatch populational diversity level presents a major hurdle for clinical translation Consequently only 10% of new drug candidates are eventually certified for clinical use presenting a soaring research cost of 4 12 billion new drug in recent years This grand challenge stimulates the development of human tissue engineered human models e g organoids microfluidic chips and organ on a chip systems as potential solutions to replace animal models Despite the rapid progress in this field current tissue engineered human models are still insufficient to recapitulate the complex morphology of target tissues and consequently inadequate to model realistic tissue function or generate transplantable tissue organ

questions open a new avenue in stem cell research the biology of stem cells in marine organisms It is therefore unfortunate that while the literature on stem cell from terrestrial organisms is rich and expanding at an exponential rate investigations on marine organisms stem cells are very limited and scarce By presenting theoretical chapters overview essays and specific research results this book summarises the knowledge and the hypotheses on stem cells in marine organisms through major phyla and specific model organisms The study on stem cells from marine invertebrates may shed lights on mechanisms promoting immunity developmental biology regeneration and budding processes in marine invertebrates body maintenance aging and senescence It aims in encouraging a larger scientific community to follow and study the novel phenomena of stem cells behaviours as depicted from the few currently studied marine invertebrates
