Receptor Subunits And Complexes:

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology *Current Topics in Membranes and Transport*, 1990-08-10 *Current Topics in Membranes and Transport* **Ion Channel Factsbook**, 1995-11-16 How do you keep track of basic information on the proteins you work with Where do you find details of their physicochemical properties sequence information gene organization Are you tired of scanning review articles primary papers and databases to locate that elusive fact The Academic Press FactsBook series will satisfy scientists and clinical researchers suffering from information overload Each volume provides a catalogue of the essential properties of families of molecules Gene organization sequence information physicochemical properties and biological activity are presented using a common easy to follow format Taken together they compile everything you wanted to know about proteins but were too busy to look for In a set of four inter related volumes The Ion Channel FactsBook provides a comprehensive framework of facts about channel molecules central to electrical signalling phenomena in living cells The first volume is devoted to Extracellular Ligand Gated Integral Receptor Channel Families including those molecular complexes activated by 5 Hydroxytryptamine ATP Glutamate Acetylcholine GABA Glycine Nomenclature Expression Sequence analyses Structure and function Electrophysiology Pharmacology Information retrieval **Neuroreceptor Endocytosis and Signaling in Health and Disease** Indra Mani, 2025-04-26 This book covers a wide range of neuroreceptor topics including receptor endocytosis and signaling and the role of neuroreceptors in health and disease conditions It focuses on various important nervous system receptors and their biomedical applications especially receptor signaling The book provides a look into the current developments of various neuroreceptors responsible for pathophysiological conditions It is a valuable cutting edge in depth reference on neuroreceptors featuring clearly written chapters from major contributors in the field The central aim is to aid future investigators researchers students and stakeholders to perform their research with greater ease This book provides an excellent basis from which scientific

knowledge can grow widen and accelerate receptor biology tools toward biomedical applications *Addictions* David Belin,2012-10-19 Addiction increasingly perceived as a heterogeneous brain disorder is one of the most peculiar psychiatric pathologies in that its management involves various often non overlapping resources from the biological psychological medical economical social and legal realms Despite extensive efforts from the players of these various fields to date there are no reliably effective treatments of addiction This may stem from a lack of understanding of the etiology and pathophysiology of this disorder as well as from the lack of interest into the potential differences among patients in the way they interact compulsively with their drug This book offers an overview of the psychobiology of addiction and its current management strategies from pharmacological social behavioural and psychiatric points of view Signal Transduction in Mast Cells and Basophils Ehud Razin,Juan Rivera,2012-12-06 Mast cells and basophils are responsible for inflammatory and allergic reactions As such the signals that generate these responses and how their pathways of action work are the focus of much present day research into allergy and inflammation This book focuses primarily on the molecular mechanisms that govern mast cell and basophil cell biology and function as well as providing a comprehensive summary of the field of signal transduction and also giving insights into areas that have therapeutic potential The book provides detailed insights into mast cell and basophil growth and development their activation by allergens including details of receptor activation and downstream events and the regulators of morphology and degranulation The metabolic pathways involved in prostaglandin and leukotriene production are discussed as is the role of transcription factors in mast cell growth and cytokine production Written by leaders in the field this volume will provide the reader with an up to date account of a topic where the rapid progress makes conventional information gathering difficult The truth in complexes: why unraveling ion channel multi-protein signaling nexuses is critical for understanding the function of the nervous system Leigh Anne Swayne,Christophe Altier, Gerald W. Zamponi,2015-04-15 In the search for simple explanations of the natural world its complicated textures are often filed down to a smoothened surface of our liking The impetus for this Research Topic was borne out of a need to re ignite interest in the complex in this case in the context of ion channels in the nervous system Ion channels are the large proteins that form regulated pores in the membranes of cells and in the brain are essential for the transfer processing and storage of information These pores full of twists and turns themselves are not just barren bridges into cells More and more we are beginning to understand that ion channels are like bustling medieval bridges packed with apartments and shops rather than the more sleek modern variety they are dynamic hubs connected with many structures facilitating associated activities Our understanding of these networks continues to expand as our investigative tools advance Together these articles highlight how the complexity of ion channel signaling nexuses is critical to the proper functioning of the nervous system *Reproductive and Developmental Toxicology* Ramesh C. Gupta,2017-03-24 Reproductive and Developmental Toxicology Second Edition is a comprehensive and authoritative resource that provides the latest literature on

this complex subject with a primary focus on three core components parent placenta and fetus and the continuous changes that occur in each Enriched with relevant references describing every aspect of reproductive toxicology this revised and updated resource addresses the totality of the subject discussing a broad range of topics including nanoparticles and radiation gases and solvents smoking alcohol and drug abuse and metals amongst others With a special focus on placental toxicity this book is the only available reference to connect the three key risk stages also including discussions on reproductive and developmental toxicity in domestic animals fish and wildlife Completely revised and updated to include the most recent developments in the field the book is an essential resource for advanced students and researchers in toxicology as well as biologists pharmacologists and teratologists from academia industry and regulatory agencies Provides a complete up to date integrated source of information on the key risk stages during reproduction and development Includes new chapters covering significant developments such as dose response assessment for developmental toxicity juvenile toxicity and neural tube defects as well as emerging science such as stem cell application toxicoproteomics metabolomics endocrine disruption surveillance and regulatory considerations and risk assessment Offers diverse and unique in vitro and in vivo toxicity models for reproductive and developmental toxicity testing in a user friendly format that assists in comparative analysis

Dupré, Terence E. Hébert, Ralf Jockers, 2012-11-19 Main

Question G protein coupled receptors are involved in highly efficient and specific activation of signalling pathways How do GPCR signalling complexes get assembled to generate such specificity In order to answer this question we need to understand how receptors and their signalling partners are synthesized folded and quality controlled in order to generate functional proteins Then we need to understand how each partner of the signalling complex is selected to join a complex and what makes this assembly possible GPCRs are known to be able to function as oligomers what drives the assembly into oligomers and what will be the effects of such organization on specificity and efficacy of signal transduction Once the receptor complexes are assembled they need to reach different locations in the cell what drives and controls the trafficking of GPCR signalling complexes Finally defects in synthesis maturation or trafficking can alter functionality of GPCRs signalling complexes how can we manipulate the system to make it function normally again Pharmacological chaperones may just be part of the answer to this question
