## **Receptor Autoradiography:**

Receptor Localization Marjorie Ariano, 1998-07-16 The detection of neurotransmitter receptor locations and distribution densities within the central nervous system and peripheral tissues is receiving intense attention within the neuroscience research community. Neurotransmitter receptors, which receive the chemical signals sent from one neuron to another, are critical links in a highly complex information processing chain. Pinpointing receptor sites and systems is crucial for understanding neurological function as well as dysfunction. It is also essential for understanding how receptors process information when impacted by such substances as heroin or nicotine or when affected by neurodegenerative disease. Receptor Localization: Laboratory Methods and Procedures is the first user-friendly guide to the latest techniques and approaches being employed to examine the localization of neurotransmitter receptors in the central nervous system and peripheral tissues. It covers detection methods that are applicable to a wide variety of receptor systems, ranging from genes and ligands to *in vivo* receptors in individuals and to numerous receptor subtypes such as nicotine, muscarine, tachykinins, dopamine, adenosine, and GABA. The standard laboratory recipes or tricks employed in these detection methods are fully discussed, as are the advantages and limitations of each procedure. With contributions from leading experts and extensively illustrated, this book discusses receptor-ligand binding methods using irreversible and reversible compounds. It presents antireceptor antisera technology using synthetic peptides and fusion proteins at both the cellular and subcellular resolution levels. It examines molecular assessments of receptors, describes *in situ* hybridization, reverse transcriptase-PCR, and fluorescent *in situ* transcription. It covers new visualization paradigms, includes physiological analysis of receptor function, cellular detection in the brain slice and cultured neurons, discusses the use of PET and SPECT to assess *in vivo* receptor distributions in animals and humans. Receptor Localization: Laboratory Methods and Procedures is an invaluable guide for researchers in the related fields of neurology, biochemistry, and pharmacology. Its lucid descriptions of new detection methods, inclusion of experimental examples, and emphasis on how these experimental approaches are applicable to particular research areas will appeal to both the experienced researcher and novice investigator. Handbook of Neurochemistry and Molecular Neurobiology Glen Baker, Susan Dunn, Abel Lajtha, Andrew Holt, 2007-03-26 The Handbook is intended to be a service to the neuroscience community to help in finding available and useful information, to point out gaps in our knowledge, and to encourage continued studies. It represents the valuable contributions of the many authors of the chapters and the guidance of the editors, and most important, it represents support for research in this discipline. Based on the rapid advances in the years since the second edition. **Receptor Autoradiography** Dr. John Wharton, Julia M. Polak, 1993 Receptor autoradiography is an invaluable technique that is widely used to localize and characterize peptide and neurotransmitter binding sites. Its extensive use reflects the utility of the technique and the important advantages it offers over conventional biochemical procedures. This instructive work makes receptor autoradiography more accessible by giving a detailed account

of the methodology and its application in the analysis of receptors in the brain and peripheral organs These examples are not exhaustive but illustrate the versatility of the technique as well as its potential pitfalls The book provides an introduction to the receptor concept and gives detailed information on the theory and procedures involved in the autoradiographic localization and quantification of radiolabelled ligand binding sites This volume will be an essential tool for neuroscientists pharmacologists histochemists neuropathologists researchers in the pharmaceutical industry and students of the biological sciences
