The Specificity and Action of Animal, Bacterial and Plant Toxins Pedro Cuatrecasas, 2013-12-17 The Specificity and Action of Animal, Bacterial and Plant Toxins Cuatrecasas P.,1977 The Receptors P. Michael Conn, 2014-05-10 The Receptors Volume III deals with receptors for interferons hormones and growth factors as well as for aminobutyric acid tuftsin somatomedin and insulin Prolactin and nicotine receptors are also considered along with the protein tyrosine kinase activity of hormone and growth factor receptors Comprised of 12 chapters this volume begins with a detailed account of secretory component SC as a receptor for polymeric immunoglobulins and the importance of SC polymeric immunoglobulin A interactions in the mucosal immune system The discussion then turns to interferon receptors and what is known about the fate of interferons and their receptors after binding the use of muscimol in ligand binding studies aimed at characterizing aminobutyric acid receptors and the role of protease nexins in the interaction of proteases with cells and in the regulation of proteolytic activity in the interstitial fluid immediately surrounding cells Subsequent chapters focus on receptor regulation of phosphoinositides and calcium effects of phospholipid turnover on receptor function dynamics of tuftsin receptors and the structure function and regulation of somatomedin receptors The book also examines the internalization and intracellular processing of insulin receptors before concluding with an analysis of prolactin and nicotine receptors This monograph will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology endocrinology and pharmacology **Selectivity and Molecular Mechanisms of Toxicity** Francesco De Matteis, Edward A. Lock, 1987-06-18 Immunotoxins Arthur E. Frankel, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy. The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Un fortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription. We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Handbook of Toxinology W. T. Shier, 2020-08-26 Organized primarily around the mechanisms of action of the toxins at

the biochemical physiological and pathological level rather than by source the handbook covers most toxins which have been clearly identified and characterized but emphasizes toxins that are more important by virtue of the sign Handbook of Natural Toxins M. Carolyn Hardegree, Anthony T. Tu, 1988-08-05 Volume 4 Receptors and Recognition ,1984 Approaches to Microbial Pathogenicity W. Goebel, 2012-12-06 **Attachment Of Organisms To The Gut Mucosa** Edgar C. Boedeker, 2018-01-18 The present volumes are based on the presentations made during the October 1981 research work shopThe attachment of micro organisms to the intestinal mucosa which was held in Reston Virginia The workshop was supported by the American Gastroenterological Association along with the National Institutes of Health **Interactions** J.L. Reissig, 2013-12-11 Microbiology has undergone a number of metamorphoses in its relatively brief existence It has been in approximate succession morphology epidemiology biochemistry genetics and molecular biology It is also becoming a significant parcel of cell surface studies. The one embodiment which has remained elusiv particularly for bacteriology is the taxonomic one This may have been a blessing in disguise because it encouraged microbiologists to deal with the general rather than the particular promoting a search for unitary explanations in the manner of Kluyver and van Niel long before anyone knew about the universality of the genetic code or could trace the genealogy of enzymes from the study of amino acid substitutions This volume is predicated on the idea that deep analogies underly the mech anisms of cellular interaction and therefore belongs in the unitary tradition of microbiology It occupies itself with a wide variety of micro organisms considering them from vantage points of considerable diversity ranging from taxonomic irreverence to keen evolutionary awareness and is concerned with areas which have developed independently of each other **Techniques for** the Analysis of Membrane Proteins C. Ragan, 2012-12-06 A preface should justify the existence of the book it precedes and this is invariably done in scientific texts by reference to the explosive growth of the field since the last such volume appeared In molecular biology most fields can be justifiably described as growing explosively as should be the case for a young and vigorous science but the study of membrane proteins stands out as one which has taken giant strides in the last few years Ignorance of the structure and function of membrane proteins at the molecular level was certainly not due to lack of interest but rather was a result of lack of appropriate techniques It has above all been the development of new experimental methods which has wrenched membrane biochemistry out of what Anthony Martonosi fetchingly called its romantic phase Le lots of ideas and few facts into an era when the determination of membrane protein structure and mechanism is a reasonable goal Membrane proteins are generally classified as peripheral or integral Peripheral proteins are relatively easily dissociated from membranes by mild treatments whence their study is essentially no different to that of soluble proteins This book therefore concentrates on integral proteins which are strongly bound to the membrane by hydrophobic interactions with lipids A crucial step in their study is of necessity the d velopment of methods of solubilization and purification under non denaturing conditions Organization of Prokaryotic Cell Membranes Bijan K. Ghosh, 2018-01-18

These volumes include a collection of authoritative articles covering the most active areas of prokaryotic biomembrane investigations and will provide a great service not only to those interested in the field but also to microbiologists in general These monographs will also serve to focus attention on prokaryotic membranes that are so often ignored by eukaryoticmembraneologists and proved an excellent reference source for many years to come **Genetic Analysis of the Cell Surface** P. Goodfellow, 2013-12-11 The cell surface is the barrier between the cell and its environment which regulates the flow of both simple and complex molecules into and out of the cell it is also the organelle responsible for communication between the cell and its environment Each cell expresses receptors for a wide variety of hormones growth factors growth substrates and other cells In multicellular organisms communication between cells is required for controlling development cellular differentiation morphogenesis and in a more general sense integration of myriad cell types into a single organism The series Receptors and Recognition has as its overall aim the dissection of the cell surface to correlate structure and function for this complex organelle In most of the preceding volumes the approach has been biochemical or physiological In this volume the mammalian cell surface is analysed by a genetic approach Genetic analysis of the cell surface especially when combined with immuno logical techniques has a long history In 1900 Landsteiner showed that serum from one individual could agglutinate the red cells of another Besides the practical result of making blood transfusion safe this was the first demon stration of a human genetic polymorphism and for the next 50 years the red blood cell surface provided most of the genetic markers used to study human populations Bioconjugate Techniques Greg T. Hermanson, 2013-07-25 Bioconjugate Techniques Third Edition is the essential guide to the modification and cross linking of biomolecules for use in research diagnostics and therapeutics It provides highly detailed information on the chemistry reagent systems and practical applications for creating labeled or conjugate molecules It also describes dozens of reactions with details on hundreds of commercially available reagents and the use of these reagents for modifying or crosslinking peptides and proteins sugars and polysaccharides nucleic acids and oligonucleotides lipids and synthetic polymers Offers a one stop source for proven methods and protocols for synthesizing bioconjugates in the lab Provides step by step presentation makes the book an ideal source for researchers who are less familiar with the synthesis of bioconjugates Features full color illustrations Includes a more extensive introduction into the vast field of bioconjugation and one of the most thorough overviews of immobilization chemistry ever presented Medical Books and Serials in Print, 1979 R. R. Bowker LLC, 1979-05 Advances in Carbohydrate Chemistry and Biochemistry, 1978-08-29 Advances in Carbohydrate Chemistry and Biochemistry Tumor Therapy M. L. Rosenblum, 1984 Chimeric Toxins Haya Lorberboum-Galski, Philip Lazarovici, 2002-05-30 Bacteria and plants produce powerful toxins that can cause a variety of diseases some of which are lethal for many animal species The mechanisms of action are common to many of these toxins and represent general pathways for the interaction of a number of biomolecules with target cells such as binding to specific surface receptors internalizati **Environmental Health**
