The Herbaceous Layer in Forests of Eastern North America

Frank S. Gilliam,Mark R. Roberts,2003-07-24 Focusing on the oft overlooked herbaceous layer of eastern forests this volume combines perspectives from different levels of biological organization ecophysiology to ecosystems and forest types from the eastern boreal forest to southeastern pine forests into a synthesis of our knowledge of the ecology of this important forest layer This is the first book of its kind to synthesize information concerning herbaceous layer structure composition and dynamics of a variety of forest ecosystem types in eastern North America With over 1 200 references cited in the 14 chapters this book represents the most comprehensive review of literature on the ecology of the herbaceous layer *Forthcoming Books* Rose Arny,1993-04 *Canadian Journal of Forest Research* ,2007

Diversity and Interaction in a Temperate Forest Community

Tohru Nakashizuka,Yoosuke Matsumoto,2013-11-11 The studies in the Ogawa Forest Reserve OPR were initiated by a group of plant ecologists and gradually expanded into a comprehensive project covering various aspects of biology soil science and silviculture The project was integrated as part of the Forest Ecosystem Team under the BIO COSMOS Program funded by the Ministry of Agriculture Forestry and Fisheries As the coordinators of the Forest Ecosystem Team we are pleased that reports of the long term studies carried out in the OFR are being published in this first volume on Japanese ecosystems in the Ecological Studies series Scientists and researchers have made numerous contributions to the field of forest ecology during more than 10 years of studies in the OFR Two reasons can be cited for the success of the project scientists from various disciplines concentrated on a single target forest ecosystem and the research continued over a relatively long term It is now recognized that ecological processes include complicated mechanisms supported by interactions among organisms and large temporal variations The researchers in the OFR project were motivated by their interest in the history of ecosystems and the interactions of diverse creatures in the forest **Books In Print 2004-2005**

Zoo Conservation Biology

John E. Fa,Stephan M. Funk,Donnamarie O'Connell,2011-08-18 In the face of ever declining biodiversity zoos have a major role to play in species conservation Written by professionals involved in in situ conservation and restoration projects internationally this is a critical assessment of the contribution of zoos to species conservation through evidence amassed from a wide range of sources The first part outlines the biodiversity context within which zoos should operate introducing the origins and global spread of zoos and exploring animal collection composition The second part focuses on the basic elements of keeping viable captive animal populations It considers the consequences of captivity on animals the genetics of captive populations and the performance of zoos in captive breeding The final part examines ways in which zoos can make a significant difference to conservation now and in the future Bridging the gap between pure science and applied conservation this is an ideal resource for both conservation biologists and zoo professionals **Modelling Forest Growth and Yield** Jerome K. Vanclay,1994 This book provides an

introduction to growth modeling in mixed forests with emphasis on the tropics It is not intended as a how to manual with step by step instructions as there is no single best way to model such forests Rather it reviews different approaches highlighting their strengths and limitations It emphasizes empirical statistical models rather than physiological process type models because of the proven utility of the former in forest management Each chapter includes exercises that can be completed manually or on PC and spreadsheet The book will serve as a reference manual for practitioners and as a text for advanced level students taking courses in forest modeling

17th Conference, Agricultural and Forest Meteorology and Seventh Conference, Biometeorology and Aerobiology, 1985 **Proceedings of a Symposium on the Kings River Sustainable Forest Ecosystems Project**, 2002 **The Ecology and Conservation of Asian Hornbills** Margaret F.

Kinnaird, Timothy G. O'Brien, 2007 Hornbills are among the world's most distinct birds Easily recognized by their oversized beaks adorned with large casques they range from Africa to India and throughout Asia One of the oldest bird orders they have been known to mankind for millennia and loom large in the mythology of indigenous cultures of tropical Asia In the past thirty years ecologists have uncovered many fascinating aspects of hornbill biology from their unique nest sealing behavior to their roles as farmers of the forest Building on fourteen years of research Margaret F Kinnaird and Timothy G O'Brien offer in *Ecology and Conservation of Asian Hornbills* the most up to date information on the evolution reproduction feeding ecology and movement patterns of thirty one species of Asian hornbills The authors address questions of ecological functionality ecosystem services and keystone relationships as well as the disturbing influence of forest loss and fragmentation on hornbills Complemented by superb full color images by renowned photographer Tim Laman that provide rare glimpses of hornbills in their native habitat and black and white illustrations by Jonathan Kingdon that highlight the intriguing aspects of hornbill behavior *Ecology and Conservation of Asian Hornbills* will stand tall in the pantheon of natural history studies for years to come

Population Dynamics in Variable Environments Shripad Tuljapurkar, 2013-04-17 Demography relates observable facts about individuals to the dynamics of populations If the dynamics are linear and do not change over time the classical theory of Lotka 1907 and Leslie 1945 is the central tool of demography This book addresses the situation when the assumption of constancy is dropped In many practical situations a population will display unpredictable variation over time in its vital rates which must then be described in statistical terms Most of this book is concerned with the theory of populations which are subject to random temporal changes in their vital rates although other kinds of variation e.g. cyclical are also dealt with The central questions are how does temporal variation work its way into a population's future and how does it affect our interpretation of a population's past The results here are directed at demographers of humans and at population biologists The uneven mathematical level is dictated by the material but the book should be accessible to readers interested in population theory Readers looking for background or prerequisites will find much of it in Hal Caswell's *Matrix population models* construction analysis and interpretation Sinauer 1989 This book is

in essence a progress report and is deliberately brief I hope that it is not mystifying I have not attempted to be complete about either the history or the subject although most significant results and methods are presented

McComb, 2007-06-20 In recent years conflicts between ecological conservation and economic growth forced a reassessment of the motivations and goals of wildlife and forestry management Focus shifted from game and commodity management to biodiversity conservation and ecological forestry Previously separate fields such as forestry biology botany and zoology merged

Global Biodiversity World Conservation Monitoring Centre, 2012-12-06 Global Biodiversity is the most comprehensive compendium of conservation information ever published It provides the first systematic report on the status distribution management and utilisation of the planet's biological wealth

Population Viability in Plants Christy A. Brigham, Mark W. Schwartz, 2013-06-29 Providing a quantitative assessment of threatened plant populations that holds for varying management scenarios has become an essential part of conservation planning Here renowned plant ecologists provide information on major threats to plants when and where to conduct a plant viability assessment PVA what type of PVA to conduct what alternative options to PVA are available what information is required for which kind of viability assessment what attributes of the population in question should be considered and what the limits of the PVA would be As such this volume can be used as a training tool for the environmental manager or a teaching aid for reviewing the current state of knowledge on plant population viability

Ecology Michael Begon, Colin R. Townsend, 2020-11-11 A definitive guide to the depth and breadth of the ecological sciences revised and updated The revised and updated fifth edition of Ecology From Individuals to Ecosystems now in full colour offers students and practitioners a review of the ecological sciences The previous editions of

this book earned the authors the prestigious Exceptional Life time Achievement Award of the British Ecological Society the aim for the fifth edition is not only to maintain standards but indeed to enhance its coverage of Ecology In the first edition 34 years ago it seemed acceptable for ecologists to hold a comfortable objective not to say aloof position from which the ecological communities around us were simply material for which we sought a scientific understanding Now we must accept the immediacy of the many environmental problems that threaten us and the responsibility of ecologists to play their full part in addressing these problems This fifth edition addresses this challenge with several chapters devoted entirely to applied topics and examples of how ecological principles have been applied to problems facing us highlighted throughout the remaining nineteen chapters Nonetheless the authors remain wedded to the belief that environmental action can only ever be as sound as the ecological principles on which it is based Hence while trying harder than ever to help improve preparedness for addressing the environmental problems of the years ahead the book remains in its essence an exposition of the science of ecology This new edition incorporates the results from more than a thousand recent studies into a fully up to date text Written for students of ecology researchers and practitioners the fifth edition of Ecology From Individuals to Ecosystems is an essential reference to all aspects of ecology and addresses environmental problems of the future *Ecology and Conservation of the Marbled Murrelet* C. John Ralph, 1997-04 This report was compiled describes past potential effects of humans on the species habitats Future research needs possible management strategies for both marine forest habitats are suggested Charts tables
