D'Angelo, 2019-07-16 *Several Complex Variables and the Geometry of Real Hypersurfaces* covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties You will learn how to decide whether a real hypersurface contains complex varieties how closely such varieties can contact the hypersurface and why it's important The book concludes with two sets of problems routine problems and difficult problems many of which are unsolved Principal prerequisites for using this book include a thorough understanding of advanced calculus and standard knowledge of complex analysis in one variable *Several Complex Variables and the Geometry of Real Hypersurfaces* will be a useful text for advanced graduate students and professionals working in complex analysis

Several Complex Variables, Part 2 Raymond O'Neil Wells, American Mathematical Society, 1977 Contains sections on Non compact complex manifolds Differential geometry and complex analysis Problems in approximation Value distribution theory Group representation and harmonic analysis and Survey papers *Geometry of Holomorphic Mappings* Sergey Pinchuk, Rasul Shafikov, Alexandre Sukhov, 2023-09-14 This monograph explores the problem of boundary regularity and analytic continuation of holomorphic mappings between domains in complex Euclidean spaces Many important methods and techniques in several complex variables have been developed in connection with these questions and the goal of this book is to introduce the reader to some of these approaches and to demonstrate how they can be used in the context of boundary properties of holomorphic maps The authors present substantial results concerning holomorphic mappings in several complex variables with improved and often simplified proofs Emphasis is placed on geometric methods including the Kobayashi metric the Scaling method Segre varieties and the Reflection principle *Geometry of Holomorphic Mappings* will

L2 Approaches in Several Complex Variables

Takeo Ohsawa, 2018-11-28. This monograph presents the current status of a rapidly developing part of several complex variables motivated by the applicability of effective results to algebraic geometry and differential geometry. Special emphasis is put on the new precise results on the L^2 extension of holomorphic functions in the past 5 years. In Chapter 1 the classical questions of several complex variables motivating the development of this field are reviewed after necessary preparations from the basic notions of those variables and of complex manifolds such as holomorphic functions, pseudoconvexity, differential forms and cohomology. In Chapter 2 the L^2 method of solving the $\bar{\partial}$ equation is presented emphasizing its differential geometric aspect. In Chapter 3 a refinement of the Oka-Cartan theory is given by this method. The L^2 extension theorem with an optimal constant is included, obtained recently by Z. B. Ock and separately by Q. A. Guan and X. Y. Zhou. In Chapter 4 various results on the Bergman kernel are presented including recent works of Maitani, Yamaguchi, Berndtsson, Guan, Zhou and Berndtsson Lempert. Most of these results are obtained by the L^2 method. In the last chapter rather specific results are discussed on the existence and classification of certain holomorphic foliations and Levi flat hypersurfaces as their stable sets. These are also applications of the L^2 method obtained during the past 15 years.

Analysis and Geometry

Ali Baklouti, Aziz El Kacimi, Sadok Kallel, Nordine Mir, 2015-07-26. This book includes selected papers presented at the MIMS Mediterranean Institute for the Mathematical Sciences (GGTM) Geometry and Topology Grouping for the Maghreb conference held in memory of Mohammed Salah Baouendi, a most renowned figure in the field of several complex variables who passed away in 2011. All research articles were written by leading experts, some of whom are prize winners in the fields of complex geometry, algebraic geometry and analysis. The book offers a valuable resource for all researchers interested in recent developments in analysis and geometry.

Analytic and Algebraic Geometry Jeffery D. McNeal, Mircea Mustata, 2010-01-01. Analytic and algebraic geometers often study the same geometric structures but bring different methods to bear on them. While this dual approach has been spectacularly successful at solving problems, the language differences between algebra and analysis also represent a difficulty for students and researchers in geometry, particularly complex geometry. The PCMI program was designed to partially address this language gulf by presenting some of the active developments in algebraic and analytic geometry in a form suitable for students. On the other side of the analysis-algebra language divide, one focal point of the summer school was multiplier ideals, a subject of wide current interest in both subjects. The present volume is based on a

series of lectures at the PCMI summer school on analytic and algebraic geometry The series is designed to give a high level introduction to the advanced techniques behind some recent developments in algebraic and analytic geometry The lectures contain many illustrative examples detailed computations and new perspectives on the topics presented in order to enhance access of this material to non specialists Publisher s description [Complex Analysis](#) Friedrich Haslinger,2017-11-20 In this textbook a concise approach to complex analysis of one and several variables is presented After an introduction of Cauchy s integral theorem general versions of Runge s approximation theorem and Mittag Leffler s theorem are discussed The first part ends with an analytic characterization of simply connected domains The second part is concerned with functional analytic methods Frchet and Hilbert spaces of holomorphic functions the Bergman kernel and unbounded operators on Hilbert spaces to tackle the theory of several variables in particular the inhomogeneous Cauchy Riemann equations and the $\bar{\partial}$ Neumann operator Contents Complex numbers and functions Cauchy s Theorem and Cauchy s formula Analytic continuation Construction and approximation of holomorphic functions Harmonic functions Several complex variables Bergman spaces The canonical solution operator to Nuclear Frchet spaces of holomorphic functions The complex The twisted complex and Schrödinger operators **Lectures and Surveys on G₂-Manifolds and Related Topics** Spiro Karigiannis,Naichung Conan Leung,Jason D. Lotay,2020-05-26 This book one of the first on G₂ manifolds in decades collects introductory lectures and survey articles largely based on talks given at a workshop held at the Fields Institute in August 2017 as part of the major thematic program on geometric analysis It provides an accessible introduction to various aspects of the geometry of G₂ manifolds including the construction of examples as well as the intimate relations with calibrated geometry Yang Mills gauge theory and geometric flows It also features the inclusion of a survey on the new topological and analytic invariants of G₂ manifolds that have been recently discovered The first half of the book consisting of several introductory lectures is aimed at experienced graduate students or early career researchers in geometry and topology who wish to familiarize themselves with this burgeoning field The second half consisting of numerous survey articles is intended to be useful to both beginners and experts in the field *The Theory of $H(b)$ Spaces* Emmanuel Fricain,Javad Mashreghi,2016-10-20 In two volumes this comprehensive treatment covers all that is needed to understand and appreciate this beautiful branch of mathematics *The Theory of $H(b)$ Spaces: Volume 2* Emmanuel Fricain,Javad Mashreghi,2016-10-20 An $H(b)$ space is defined as a collection of analytic functions that are in the image of an operator The theory of $H(b)$ spaces bridges two classical subjects complex analysis and operator theory which makes it both appealing and demanding Volume 1 of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of $H(b)$ spaces such as Hardy spaces Fourier analysis integral representation theorems Carleson measures Toeplitz and Hankel operators various types of shift operators and Clark measures Volume 2 focuses on the central theory Both books are accessible to graduate students as well as researchers each volume contains numerous exercises and hints and figures
