ABSTRACT

We investigate the Cauchy problem for the focusing inhomogeneous nonlinear Schrödinger equation $i\partial_t u + \Delta u = -|x|^b |u|^{p-1} u$ in the radial Sobolev space $H^1_{rad}(\mathbb{R}^N)$, where $b > 0$ and $p > 1$. We show the global existence and energy scattering in the intercritical regime, i.e., $p > \frac{N+4+2b}{N}$ and $p < \frac{N+2+2b}{N-2}$ if $N \geq 3$. We also obtain blowing-up solutions for the mass-critical and mass-supercritical nonlinearities. The main difficulty, coming from the spatial growing nonlinearity, is overcome by refined Gagliardo–Nirenberg-type inequalities. Our proofs are based on improved Gagliardo–Nirenberg inequalities, the Morawetz–Sobolev approach of Dodson and Murphy [Proc. Am. Math. Soc. 145(11), 4859–4867 (2017)], radial Sobolev embeddings, and localized virial estimates.

I. INTRODUCTION

In this paper, we consider the Cauchy problem for the following focusing inhomogeneous nonlinear Schrödinger equation:

$$i\partial_t u + \Delta u = -|x|^b |u|^{p-1} u, \qquad (t, x) \in \mathbb{R}_+ \times \mathbb{R}^N, \tag{1.1}$$

where $b > 0$ and $p > 1$. Equation (1.1) is a special case of a more general inhomogeneous nonlinear Schrödinger equation given by

$$i\partial_t u + \Delta u = -K(x)|u|^{p-1} u, \tag{1.2}$$

which arises in various physical contexts such as the propagation of a laser beam and plasma waves. Here, u is the electric field in laser optics and K is proportional to the electric density.[1,2] For $p = 3$, Eq. (1.1) can be viewed as a model of dilute Bose–Einstein condensate when the two-body interactions of the condensate are considered.[1,3]

The Cauchy problem for (1.2) was first investigated by Merle[4] who proves the existence of blow-up solutions in the mass-critical regime and under some assumptions on K including in particular $k_1 \leq K(x) \leq k_2$ with k_1, k_2 being positive constants. Later on, the stability of standing waves was studied in Refs. 7 and 8 for $K(x) = K(\varepsilon|x|)$ with $K \in C^4(\mathbb{R}^N) \cap L^\infty(\mathbb{R}^N)$, $\varepsilon > 0$ small, and $p \geq 1 + \frac{4}{N}$. Recently, the Cauchy problem

Silton,Paul Weinacht,2008 The prediction of the dynamic stability derivatives roll damping Magnus and pitch damping moments were evaluated for three spin stabilized projectiles using steady state computational fluid dynamic CFD calculations Roll damping CFD predictions were found to be very good across the Mach number range investigated Magnus moment predictions were very good in the supersonic flight regime however the accuracy varied in the subsonic and transonic flight regime The best Magnus moment prediction in the subsonic flight regime was for the square base projectile that did not exhibit highly nonlinear Magnus moments A primary contribution of this report is the demonstration that the pitch damping moment can be adequately predicted via steady state methods rather than resorting to unsteady techniques The predicted pitch damping moment compared very well to experimental data for the three projectiles investigated For one configuration the pitch damping moment was predicted by several CFD codes two different steady state methods and a time accurate planar pitching motion method All methods compared very well to each other and to the experimental data   **Meteorological Fluid Dynamics** Radyadour K. Panchev,2012-12-06 1 ABOUT THE DISCIPLINE DYNAMIC METEOROLOGY The name dynamic meteorology is traditional for designating a university course as well as the scientific branch of meteorology as a whole While there is no need to abandon this name it needs contemporary treatment and specifications in its definition A synonym for it could be dynamics more precisely hydrodynamics or fluid dynamics of the atmosphere It suggests the relationship of this discipline to general hydrodynamics and applied mathematics and its

pronounced theoretical nature Besides the atmosphere however our planet has another liquid envelope the hydrosphere world s ocean which also concerns ocean dynamics and therefore it is necessary to define from a unified standpoint the subject and aims of the disciplines dealing with the dynamics of the processes which take place in both fluid spheres Such a unified standpoint offers the so called geophysical fluid dynamics During the past few years this description is encountered quite often in scientific literature concerning the Earth as a planet Obviously a scientific branch or a science is created whose subject is our planet and the investigation methods are borrowed from classical fluid dynamics and applied mathematics including the most recent numerical methods As can be seen from its very suitable name it is the dynamics of quite definite geophysical fluids atmosphere ocean and even the liquid inside of the Earth and not of some abstract often perfect flUids as in classical hydrodynamics **Variational Methods in Geosciences** Y.K. Sasaki,2012-12-02 The last few decades have seen a spectacular growth in the use of variational methods one of the most classic and elegant methods in physical and mathematical sciences as powerful tools of optimization and numerical analysis The tremendous accumulation of information on the use of variational methods in the area of the geosciences which includes meteorology oceanography hydrology geophysics and seismology indicated the need for the first symposium on Variational Methods in Geosciences to be organized and held in Norman on October 15 17 1985 The value of this symposium was enhanced by the number of stimulating and informative papers presented Physics and Chance Lawrence Sklar,1993 Lawrence Sklar offers a comprehensive non technical introduction to statistical mechanics and attempts to understand its foundational elements *Understanding and Predicting the Gulf of Mexico Ocean Dynamics* Julio Sheinbaum,Eric Chassignet,Steven L. Morey,Ruoying He,2024-04-08 For the past several years a number of research programs have funded significant efforts to advance understanding of and forecasting capabilities for the Gulf of Mexico circulation including the Loop Current its associated eddies and abyssal dynamics One such program is the National Academies Understanding Gulf Ocean Systems initiative which focuses on improving forecasts of the physical dynamics of the open Gulf of Mexico in space and time scales useful for the reduction of risks to offshore energy exploration and production as well as for other challenges such as forecasting hurricane intensification and managing fisheries What has been learned how can this scientific progress be incorporated into operational models and what are the remaining gaps in knowledge impeding predictive skill **Theoretical Approaches to Biological Control** Bradford A. Hawkins,Howard V. Cornell,2008-10-14 Biological control is the suppression of pest populations using predators parasitoids and pathogens Historically biological control has largely been on a trial and error basis and has failed more often than it has succeeded However by developing theories based upon fundamental population principles and the biological characteristics of the pest and agent we can gain a much better understanding of when and how to use biological control This book gathers together recent theoretical developments and provides a balanced guide to the important issues that need to be considered in applying ecological theory to biological control It will be a source of

productive and stimulating thought for all those interested in pest management theoretical ecology and population biology
