Performance assessment of bycatch and discards governance by regional fisheries management organizations , The Last Fish Swimming Gohar A. Petrossian, 2019-05-17 This book examines the global local and specific environmental factors that facilitate illegal fishing and proposes effective ways to reduce the opportunities and incentives that threaten the existence of the world s fish Humans are deeply dependent on fishing globally fish comprise 15 percent of the protein intake for approximately 3 billion people and 8 percent of the global population depends on the fishing industry as their livelihood The global fishing industry is plagued by illegal fishing however and many highly commercial species such as cod tuna orange roughy and swordfish are extremely vulnerable Through criminological analysis The Last Fish Swimming emphasizes the importance of looking at specific environmental factors that make illegal fishing possible It examines such factors as proximity to known ports where illegally caught fish can be landed without inspection i e ports of convenience fisheries monitoring control and surveillance efforts formal surveillance and resource attractiveness in 53 countries that altogether represent 96 percent of the world s fish catch The book calls upon the global

community to address the illegal depletion of the world's fish stock and other similar threats to the world's food supply and natural environment in order to ensure the sustainability of the planet's fish and continuation of the legal fishing industry for generations to come

Marine Protected Areas Network in the South China Sea Vu Hai Dang, 2014-01-09 The once pristine and rich marine environment of the South China Sea is degrading at an alarming rate due to the rapid socioeconomic development of the region. Despite this and due mainly to complicated sovereignty and maritime disputes, coastal States have not been able to develop effective regional cooperation to safeguard the shared marine environment. The Marine Protected Areas Network in the South China Sea discusses legal and political measures to support the development of a network of marine protected areas in the South China Sea. Such a network, if properly developed, would not only help to protect the marine environment and resources of the region but also contribute to decreasing the tension among its coastal States. These measures are suggested in accordance with international law based on the specific geopolitical context of the South China Sea region and take into consideration experiences in developing regional networks of marine protected areas from other marine regions.

SPC Quarterly Bulletin, 1967 *China and International Fisheries Law and Policy* Guifang Xue, 2005-12-01 This book deals with China's response to international fisheries law and policy as envisaged in the LOSC framework and post-LOSC fisheries instruments. A substantial effort was made to examine the major areas of China's national action on legislative harmonisation and policy adjustment to implement these instruments. China's regional fisheries cooperation in the form of bilateral agreements with Japan, South Korea and Vietnam is evaluated to identify the progress already achieved and the problems that remain to be solved in managing the shared fish stocks between these maritime neighbours. As the first monograph of its kind dealing with the complex issue of the global fisheries crisis and China's fisheries management practice over a significant period of time, the book builds a bridge between China and the world for a better understanding of Chinese fisheries management. It will be of great value to academics, professionals and policy makers alike.

Strengthening International Fisheries Law in an Era of Changing Oceans Richard Caddell, Erik J Molenaar, 2019-04-04 This collection addresses the central question of how the current international framework for the regulation of fisheries may be strengthened in order to meet the challenges posed by changing fisheries and ocean conditions in particular climate change. International fisheries law has developed significantly since the 1990s through the adoption and establishment of international instruments and bodies at the global and regional levels. Global fish stocks nevertheless remain in a troubling state and fisheries management authorities face a wide array of internal and external challenges including operational constraints. Providing effective management advice in the face of scientific uncertainty and non-compliance by States with their international obligations, this book examines these challenges and identifies options and pathways to strengthen international fisheries law. While it has a primarily legal focus, it also features

significant contributions from specialists drawn from other disciplines notably fisheries science economics policy and international relations in order to provide a fuller context to the legal policy and management issues raised Rigorous and comprehensive in scope this will be essential reading for lawyers and non lawyers interested in international fisheries regulation in the context of profoundly changing ocean conditions
