Fundamentals; Direct Current United States. Army. Signal Corps, 1951 Theory of CMOS Digital Circuits and Circuit Failures Masakazu Shoji, 2014-07-14 CMOS chips are becoming increasingly important in computer circuitry They have been widely used during the past decade and they will continue to grow in popularity in those application areas that demand high performance Challenging the prevailing opinion that circuit simulation can reveal all problems in CMOS circuits Masakazu Shoji maintains that simulation cannot completely remove the often costly errors that occur in circuit design To address the failure modes of these circuits more fully he presents a new approach to CMOS circuit design based on his systematizing of circuit design error and his unique theory of CMOS digital circuit operation In analyzing CMOS digital circuits the author focuses not on effects originating from the characteristics of the device MOSFET but on those arising from their connection This emphasis allows him to formulate a powerful but ultimately simple theory explaining the effects of connectivity by using a concept of the states of the circuits called microstates Shoji introduces microstate sequence diagrams that describe the state changes or the circuit connectivity changes and he uses his microstate theory to analyze many of the conventional CMOS digital circuits These analyses are practically all in closed form and they provide easy physical interpretation of the

circuit s working mechanisms the parametric dependence of performance and the circuit s failure modes Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Distribution, Relative Abundance, and Movement of Skipjack Tuna, Katsuwonus Pelamis, in the Pacific Ocean Based on Japanese Tuna Longline Catches, 1964-67 Walter M. Matsumoto,1975 Catch data of the Japanese tuna longline fishery from 1964 to 1967 were analyzed to determine the distribution abundance and movement of skipjack tuna Katsuwonus pelamis in offshore waters of the Pacific Ocean Large skipjack tuna as well as larvae were found to be concentrated mainly in the east central equatorial Pacific Movement of skip jack tuna stocks was determined by following the shifting of high CPUE catch per unit effort cells from one quarter to the next The apparent movement of skipjack tuna stocks in the Pacific appeared to coincide with the circulation of the major ocean currents counterclockwise in the southern hemisphere and clockwise in the northern hemisphere except in the eastern Pacific where the current flow is counterclockwise The movement patterns of high CPUE suggested that skipjack tuna adults or their progeny could move from one area to the next The movement pattern was used also to determine the probable migratory routes followed by skipjack tuna tagged in the eastern Pacific and recovered near the Hawaiian and Christmas islands

Sea-surface Temperature Variability Analysis of Potential OTEC Sites Utilizing Satellite Data

Fred M. Vukovich,United States. Department of Energy,1979 The primary purpose of this research was to perform an analysis of the constancy of the sea surface temperature in candidate locations for OTEC siting Most in situ data available to determine the constancy of the sea surface temperature were obtained using point sensors that recorded surface

temperature at specific points and at specific times or for some specific period These data while establishing certain gross or average patterns are inadequate for describing short term temperature variations for large areas and are insufficient for assessing the constancy of the temperature patterns relative to selecting potential sites for OTEC The only data available for analysis of the synoptic ocean surface temperature pattern are those obtained in the last five years by infrared scanning radiometer systems on earth observational satellites For this study the satellite infrared ir data for the period 1973 1977 were used to identify and locate major thermal fronts at the sea surface These data were then used to glean certain statistics on these fronts In situ data were used when available to determine temperature difference across specified thermal fronts This study was performed in three regional locations of interest to OTEC The specific regions are Region I Eastern Gulf of Mexico bounded by 22 N to 30 N and 91 W to the west coast of Florida including the Straits of Florida Region II the east coast of Florida bounded by 23 N to 32 N and the east coast of Florida to 79 W and Region III Puerto Rico and vicinity bounded by 17 to 19 N 64 to 68 W Results are presented and discussed
